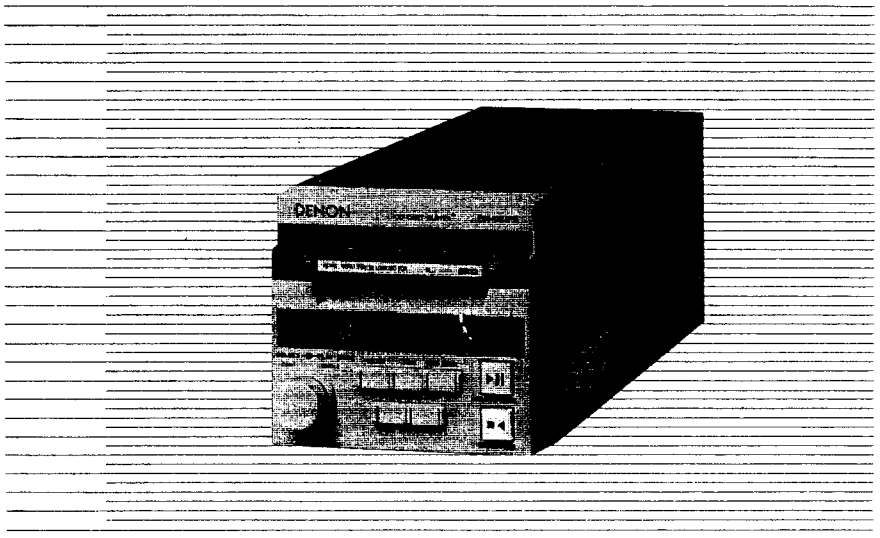
OPERATING INSTRUCTIONS



IMPORTANT TO SAFETY

WARNING:
TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

NOTE:
This CD player uses a semiconductor laser. To allow you to enjoy music with stable operation, we recommend to use it in a room whose temperature is between 5°C and 35°C.

Please check to make sure the following items, aside from the main unit, are packed in the carton.

(1) Operating instructions ..... 1 pc.
(2) Cartridge (ACD-5B) ..... 1 pc.
(3) 3P power supply cord ..... 1 pc.
(4) Spare fuse ..... 1 pc.

CAUTION:

1. **Handle the power supply cord carefully.**
   Do not damage or deform the power supply cord. If it is damaged or deformed, it may cause electric shock or malfunction when using. When disconnecting it from wall outlet, be sure to hold the plug attachment. Do not pull on the cord.
2. **Do not open the top cover.**
   In order to prevent electric shock, do not open the top cover. If problems occur, contact your DENON dealer.
3. **Do not place anything inside.**
   Do not place metal objects or spill liquid inside the CD player, as this may result in electric shocks or malfunction.

Please record and retain the model name and serial number of your set shown on the rating label.

Model No. DN-951FA Serial No. _____

[1] GENERAL

Main Features

The DN-951FA CD cart player is a table-top cartridge type CD player designed for use in broadcast stations, for production, etc.

1) A rotary pulse encoder is used for the selector which selects tracks and index numbers, making selection simple.
   When the selector is turned, the track or number display changes, the search operation starts immediately, and the pickup moves quickly to the play start position.
2) Playback signals are output immediately when the play mode is set.
   In addition, delay start can be preset.
3) The play time display can be switched between the remaining time and the elapsed time, depending on the purpose.
4) When the STDBY/CUE button is pressed during playback, the pickup moves to the position at which the play mode was last set and the standby mode is set, making it simple to check the track which is playing.
5) The last section of that track can be monitored by pressing the END MON (end monitor) button during the standby mode.
6) An E.O.M. (End of Message) signal can be emitted when near the end of playback to warn that playback is about to end.
7) The pickup can be moved to any position on the disc using the manual search operation.
8) The signals for the left and right channels can be mixed for mono output.
9) The playing speed can be varied within the range of 0 to +3%, by 0.2% step.
10) Discs recorded on the CD cart recorder (DN-7700R) and not including TOCs can be played.
11) The player can be controlled externally via both parallel and serial remote connectors.
12) The player can be connected to the fader switch on a mixing control console and fade-started.
13) The cartridge system offers the following advantages:
    a) Discs (cartridges) can be loaded and replaced easily.
    b) The discs are protected from scratches, fingerprints, dust, etc., allowing stable playback over a long period of time.
    c) Even when the cartridge is loaded is sticks out partially, so title label can be attached to it and discs checked even when the cartridge is loaded.
    d) Discs can be stored and arranged right in the cartridges.
    e) A selection label can be attached to the cartridge to select and play a certain track.

2 DESCRIPTION OF THE FUNCTION

1) Names and Functions of the Parts

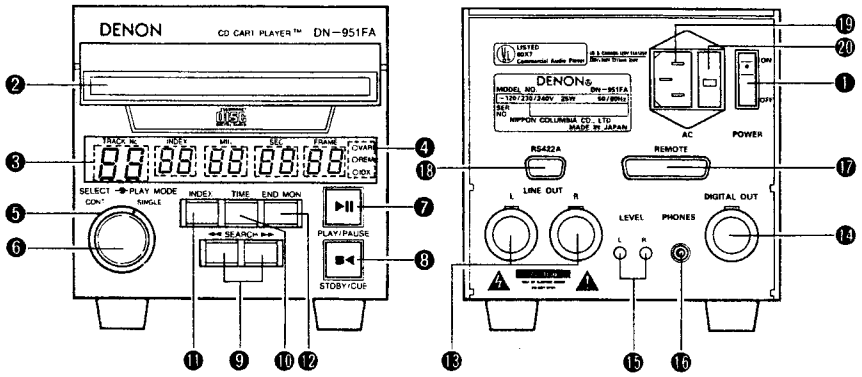

Figure 1

❶ POWER (Power Switch)
The power turns on when the POWER switch is set to the ON side, and turns off when the switch is set to the OFF side.

❷ Cartridge Tray
This is the tray for inserting a cartridge (ACD-5B).

❸ Display
The display window includes the "TRACK No.", "INDEX", "MIN", "SEC", and "FRAME" displays, and the "REM", "VARI", and "IDX" LEDs.

❹ "VARI", "REM" and "IDX" indicators
VARI: This lights when the playing speed is set at anything other than standard. (Refer to presetting on page 9).
REM: This lights when the remaining time is displayed.
IDX: This lights when in the index selection mode.

❺ PLAY MODE (Play Mode Switch)
This is for switching the play mode between the single track mode (SINGLE) and continuous play mode (CONT.).

❻ SELECT (Selector Knob)
This knob is used to select track and index numbers.

❼ PLAY/PAUSE (Play/Pause Button)
This button is pressed to start playback, or during playback to set the pause mode.

❽ STDBY/CUE (Standby/Cue Button)
When this button is pressed during playback, the pickup returns to the position at which playback started, the standby mode is set, and the button lights (yellow).

❾ SEARCH (Search Buttons)
These buttons are used to change the position for starting playback.

❿ TIME (Time Button)
This button is used to switch the time display between the elapsed time and remaining time.

⓫ INDEX (Index Button)
This button is used to switch between the track selection mode and index number selection mode.

⓬ END MON (End Monitor Button)
This button is pressed during the standby mode to play the last section of the track.
* For instructions on setting the playing time, refer to d5-5, 6 and 7 under "Presettings" on Page 9.

⓭ LINE OUT L/R (Output Connectors)
1) These are active balanced type outputs using XLR type connectors.
Connect them to balanced type inputs with an impedance of 600 ohms on an amplifier or console.
2) Signal layout
Pin 1 : Common
Pin 2 : Cold
Pin 3 : Hot
3) Applicable connector: Cannon XLR-3-11C or the equivalent
NOTE: Do not short-circuit the hot or cold pin with the common pin.

⓮ DIGITAL OUT (Digital Output Connector)
1) This is an active balanced type output using an XLR type connector.
Connect it to the balanced type digital input on an amplifier or console.
2) Signal layout
Pin 1 : Common
Pin 2 : Cold
Pin 3 : Hot
3) Applicable connector: Cannon XLR-3-11C or the equivalent
NOTE: When using the digital output, set preset item d3-8 to "1".

⓯ LEVEL L/R (Output Level Controls)
These adjust the level of the audio signals output from the LINE OUT L/R ⓭ connectors.

⓰ PHONES (Headphones Jack)
Connect headphones with an impedance of 30 to 40 ohms.

⓱ REMOTE (Remote Control Connector)
1) This is a connector for parallel remote connection.
The player can be controlled remotely with a dry contact circuit connection.
2) Applicable connector: 25-pin D-sub plug
3) Signal layout

Pin No.		Signal	I/O	Level	
1		FG	–		
	14	PLAY TALLY	O	TTL	(Iol=48 mA)
2		PLAY COMMAND	I	HCMOS	(Iі=–3 mA)
	15	PAUSE TALLY	O	TTL	(Iol=48 mA)
3		PAUSE COMMAND	I	HCMOS	(Iі=–3 mA)
	16	STDBY/CUE TALLY	O	TTL	(Iol=48 mA)
4		STDBY/CUE COMMAND	I	HCMOS	(Iі=–3 mA)
	17	INDEX 2/3 TALLY	O	TTL	(Iol=48 mA)
5		TRACK (+) COMMAND	I	HCMOS	(Iі=–3 mA)
	18	NC	–		
6		TRACK (–) COMMAND	I	HCMOS	(Iі=–3 mA)
	19	NC	–		
7		SEARCH (FWD) COMMAND	I	HCMOS	(Iі=–3 mA)
	20	NC	–		
8		SEARCH (REV) COMMAND	I	HCMOS	(Iі=–3 mA)
	21	NC	–		
9		FADER START	I	PHOTO COUPLER	(Iі=–10 mA)
	22	TALLY POWER SUPPLY	O	+5 V, 20 mA	
10		COMMAND COMMON	–		
	23	COMMAND COMMON	–		
11		NC	–		
	24	E.O.M./INDEX 2/INDEX 3	O	DRY CONTACT	
12		NC	–		
	25	E.O.M./INDEX 2/INDEX 3	O	DRY CONTACT	
13		NC	–		

⓲ RS422A (Remote Control Connector)
1) This is a connector for serial remote connection.
The player can be connected to and controlled from a personal computer or other external controller.
2) Applicable connector: 9-pin D-sub plug
3) Baud rate: 9600bps
4) Signal layout

Pin No.		Signal	I/O	Level
1		F.GROUND	–	
	6	S.GROUND	–	
2		TxD (RETURN)	O	RS422A
	7	TxD	O	RS422A
3		RxD	I	RS422A
	8	RxD (RETURN)	I	RS422A
4		NC	–	
	9	NC	–	
5		NC	–	

⓳ AC (AC Inlet)
Insert the included power cord here.

⓴ Fuse Holder
- To replace the fuse, use small screwdrivers, etc., to push the catches (A) and (B) at the top and bottom of the holder inward and remove the fuse holder outward.
- Replace the old fuse with one with the rating indicated on the panel.
Type of fuse: T1.00 A 125 V for 120 V operation
T315 mA 250 V for 230/240 V operation

• PRESET VOLTAGE CHANGE
DN-951FA allows selection of either 120 V, 230 V or 240 V operation. The unit has been preset at 240 V prior to shipment except for U.S.A. & Canada. In order to use the unit at 120 V or 230 V, follow the procedures below.
1. The fuse holder serves as a voltage selector.
2. Turn the voltage selector block so that the proper voltage setting (120 or 230) appears in the indication window and refit it.
Be sure to replace a fuse described in the above when operate the unit with 120 V.
3. Press in the fuse holder back to the main body. Make sure of the click action of the fixing tabs for secure fitting.

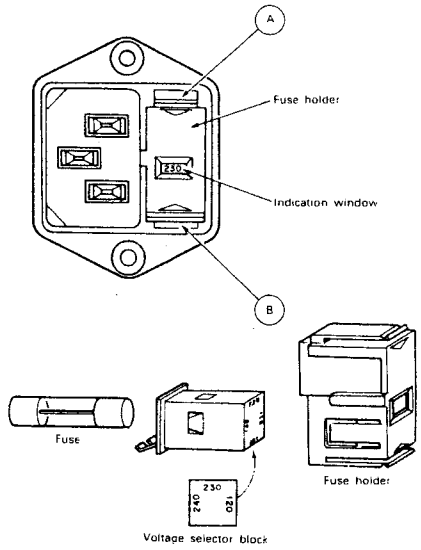

Figure 2

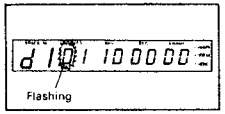
2) Presettings

- Setting procedure

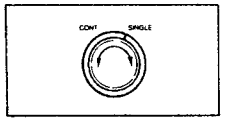
① 
* The presettings can only set when no cartridge (disc) is loaded or when cartridge (disc) is loaded and in the standby mode.
Press the STDBY/CUE button once while holding in the INDEX and TIME buttons. The "d1" preset mode (for example d 1 01 10 00 00) appears on the display, and the settings can now be changed.
(The LED flashes where you can change modes.)



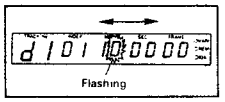
* To change the setting from "d1" to "d2", "d3", etc., press the STDBY/CUE button the number of times necessary while holding in the INDEX and TIME buttons.

→ d1 → d2 → d3 → d4 → d5 → d6 → d7 ——
End of preset setting mode ——

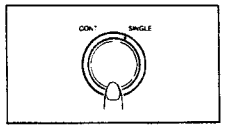
②



- Turn the SELECT knob to change the position which is flashing.
The flashing position moves to the right when the knob is turned clockwise, and to the left when the knob is turned counterclockwise.



③



- Press the SELECT knob to change the "0" or "1" setting.
The INDEX × 10 indicator on the display window changes from "0" to "1".
Press the knob again to change the setting back from "1" to "0".

* [1] indicates the setting is turned on.
[0] indicates the setting is turned off.
Set to on or off as necessary for that function.

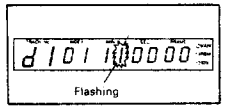


Figure 3

To turn off the preset setting mode:
Repeat step ① above, press the STDBY/CUE button until "d7" is displayed, then press it once again. The new preset setting mode is memorized. The display reads as it was before the settings were started.

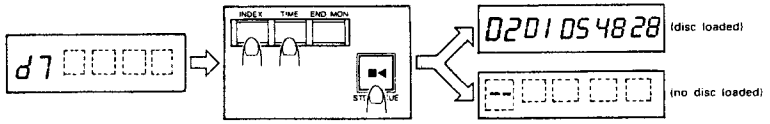

Figure 4

- **Description of preset functions**

(off = 0, on = 1. The "*" mark indicates settings upon shipment from the factory.)

[d1-1] MONO
* [0]: L/R stereo signals output.
[1]: L/R signals output mixed.

[d1-2, 3 and 4] CUE DETECT LEVEL:

	[d1-2]	[d1-3]	[d1-4]	Detection level
	0	0	0	–∞
	1	0	0	–72 dB
	0	1	0	–66 dB
*	1	1	0	–60 dB
	0	0	1	–54 dB
	1	0	1	–48 dB
	0	1	1	–42 dB
	1	1	1	–36 dB

[d1-5, 6 and 7] FADE IN DURATION:

	[d1-5]	[d1-6]	[d1-7]	Fade in time
*	0	0	0	0
	1	0	0	10 msec
	0	1	0	30 msec
	1	1	0	53 msec
	0	0	1	106 msec
	1	0	1	148 msec
	0	1	1	185 msec
	1	1	1	247 msec

[d2-1]	FRAME DISPLAY		[0]:	Frame not displayed during playback.
		*	[1]:	Frame displayed during playback.
[d2-2]	INITIAL DISPLAY		[0]:	Elapsed time displayed when power turned on.
		*	[1]:	Remaining time displayed when power turned on.
[d2-4]	END DETECT		[0]:	Track ends not detected during search operation.
		*	[1]:	Track ends detected during search operation.
[d2-5]	RE CUE	*	[0]:	Stop mode set when playback ends.
			[1]:	When playback ends, pickup returns to starting position and standby mode set.
[d2-6]	PLAY LOCK	*	[0]:	Buttons other than the ones below also function during playback.
			[1]:	Buttons other than the PLAY MODE, TIME, PLAY/PAUSE and RESET buttons do not function during playback.
[d2-7]	FLASH		[0]:	PLAY indicator remains turned off (without flashing) during EOM operation, PAUSE indicator remains turned off when playback ends, and STDBY/CUE indicator remains turned off during search operation.
		*	[1]:	PLAY indicator flashes during EOM operation, PAUSE indicator flashes when playback ends, and STDBY/CUE indicator flashes during search operation.
[d3-1]	REMOTE INHIBIT	*	[0]:	"REMOTE" command accepted.
			[1]:	"REMOTE" command not accepted.
[d3-2]	SWITCH INHIBIT	*	[0]:	No front panel buttons other than PLAY MODE, TIME and RESET buttons function.
			[1]:	All buttons function.

[d3-3, 4 and 5] E.O.M.: (PLAY/PAUSE button flashes green)

	[d3-3]	[d3-4]	[d3-5]	E.O.M. time setting
	0	0	0	E.O.M. not output
	1	0	0	5 sec
*	0	1	0	10 sec
	1	1	0	15 sec
	0	0	1	20 sec
	1	0	1	25 sec
	0	1	1	30 sec
	1	1	1	35 sec

[d3-8]	DIGITAL OUT	*	[0]:	Standard playback mode. Only audio data output from digital output.
			[1]	Digital output priority mode. Audio data and subcodes output from digital output. DSP functions (FADE IN, MONO) inhibited.
[d4-1]	TEST	*	[0]:	Standard playback mode. (Always leave this at [0]. The player cannot be used if set to [1].)
[d4-2]	VARIABLE SPEED ENABLE			
		*	[0]:	Discs played at standard speed.
			[1]:	Discs played at speed set by variable speed presetting [d6-1, 2, 3 and 4].
[d4-3]	BAR CODE		[0]:	Bar code plate function inhibited.
		*	[1]:	When cartridge with bar code plate inserted, standby mode set at track indicated by bar code.

[d4-5, 6] DELAY START:

	[d4-5]	[d4-6]	Delay start time setting
*	0	0	0 msec
	1	0	100 msec
	0	1	200 msec
	1	1	300 msec

[d4-7]	CDR DISC	*	[0]:	Mode for playing normal discs including TOCs. (Discs without TOCs cannot be played.)
			[1]:	Discs recorded on a CD recorder (DN-7700R, etc.) without TOCs can be played.
[d4-8]	NEXT TRACK STANDBY			
		*	[0]:	When playback ends, next operation performed according to "RE CUE" setting.
			[1]:	When playback ends, standby mode set at next track. ("RE CUE" setting ignored.)
[d5-1]	INDEX INHIBIT	*	[0]:	Index numbers can be selected.
			[1]:	Index numbers cannot be selected.
[d5-2]	INDEX 3/2		[0]:	"INDEX 2 TALLY" output from REMOTE connector pins 24 and 25. (Not valid when [d5-3] set to [1].)
		*	[1]:	"INDEX 3 TALLY" output from REMOTE connector pins 24 and 25. (Not valid when [d5-3] set to [1].)
[d5-3]	EOM/INDEX	*	[0]:	"INDEX TALLY" (set by INDEX 3/2 [d5-2]) output from REMOTE connector pins 24 and 25.
			[1]:	"EOM TALLY" output from REMOTE connector pins 24 and 25.
[d5-4]	FADER START MODE SELECT			
			[0]:	Player starts when fader switch turned on.
		*	[1]:	Player starts when fader switch turned on, set to pause mode when fader switch turned off.

[d5-5, 6 and 7] END MONITOR:

	[d5-5]	[d5-6]	[d5-7]	End monitor time setting
	0	0	0	End monitor off.
	1	0	0	5 sec
*	0	1	0	10 sec
	1	1	0	15 sec
	0	0	1	20 sec
	1	0	1	25 sec
	0	1	1	30 sec
	1	1	1	35 sec

[d5-8]	INDEX 2	*	[0]:	"INDEX 3 TALLY" output from REMOTE connector pin 17.
			[1]:	"INDEX 2 TALLY" output from REMOTE connector pin 17.

[d6-1, 2, 3 and 4] VARIABLE SPEED: This sets the playing speed within a range of 0 to 3% when [d4-2] is set to [1].

	[d6-1]	[d6-2]	[d6-3]	[d6-4]	Playback speed
	0	0	0	0	0.0% (Standard speed)
	1	0	0	0	+0.2%
	0	1	0	0	+0.4%
	1	1	0	0	+0.6%
	0	0	1	0	+0.8%
	1	0	1	0	+1.0%
	0	1	1	0	+1.2%
	1	1	1	0	+1.4%
	0	0	0	1	+1.6%
	1	0	0	1	+1.8%
*	0	1	0	1	+2.0%
	1	1	0	1	+2.2%
	0	0	1	1	+2.4%
	1	0	1	1	+2.6%
	0	1	1	1	+2.8%
	1	1	1	1	+3.0%

[d6-5]	SKIP TRACK		[0]:	Skip track playback as set in the TOC is possible when playing CDR discs.
		*	[1]:	Skip track playback as set in the TOC is not possible when playing CDR discs.
[d6-6]	END MARK	*	[0]:	The track end position does not change even if the PLAY/PAUSE button is pressed during the end monitor mode.
			[1]:	The position at which the PLAY/PAUSE button is pressed during the end monitor function becomes the track end position.

[d7] PLAYER ID: Set to 4-bit (binary) to control the player with commands including IDs from the RS-422A connector.
* When several units are connected via the RS-422A connector, separate IDs must be set for each of them.

	[d7-1]	[d7-2]	[d7-3]	[d7-4]	ID
*	0	0	0	0	0
	1	0	0	0	1
	0	1	0	0	2
	1	1	0	0	3
	0	0	1	0	4
	1	0	1	0	5
	0	1	1	0	6
	1	1	1	0	7
	0	0	0	1	8
	1	0	0	1	9
	0	1	0	1	10
	1	1	0	1	11
	0	0	1	1	12
	1	0	1	1	13
	0	1	-	1	14
	1	1	1	1	15

- **Resetting to the default settings**
  Turn the POWER switch on while holding in the INDEX and TIME buttons.
  All values are reset to the values indicated on the "Table of preset functions".

3) Connections

3)-1 Output signal connections

① Analog output signal connections
Connect the player's output connectors (LINE OUT L and R) ⑯ to the balanced inputs on an amplifier or console using 3-pin cords.

② Digital output signal connections
To use the digital output, connect the player's output connector (DIGITAL OUT) ⑫ to the balanced digital input on an amplifier or console using a 3-pin cord.

NOTES:
1) When using the digital output, set preset item d3-8 to "on".
2) To send the digital output to an unbalanced circuit, do so via a balanced/unbalanced conversion circuit.

Balanced/unbalanced conversion circuit

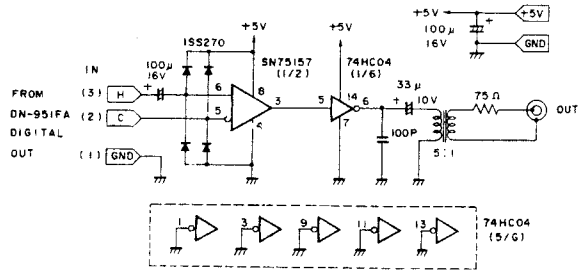

Figure 5

3)-2 Remote signal connections

① Parallel remote signal connections
To use the player remotely, connect the remote connector (REMOTE) ⑰ with the remote control circuit using a 25-pin D-sub cord.
NOTE: When using parallel remote connections, set preset item d3-1 to "off".

② Serial remote signal connections
To use the player connected to a controller or personal computer, connect the remote connector (RS422A) ⑱ to the controller using a 9-pin D-sub cord.

3)-3 Power supply connections

Connect the player to a power supply with the preset voltage (as shown on the fuse holder window) using the included power cord. Make sure the POWER switch is turned off when doing so.

3)-4 Remote control connections

To control the DN-951FA remotely, refer to the example of remote control connections given below.

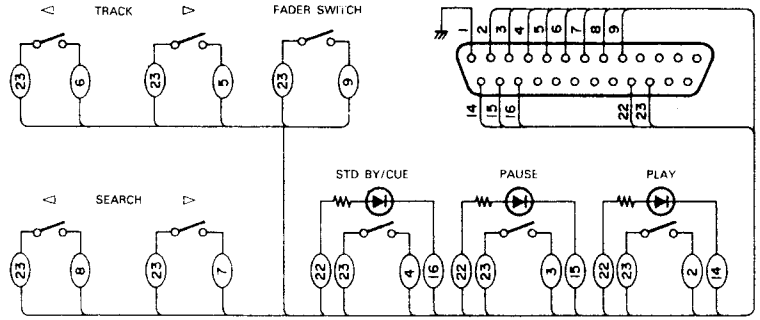

Figure 6

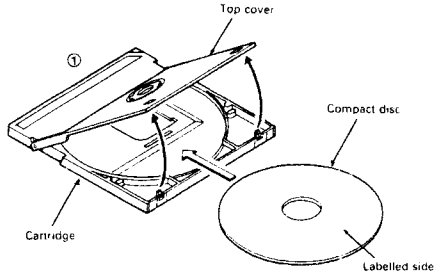
4) Housing Disc in and Removing Disc from Cartridge (ACD-5B)

To play a compact disc on this player, the disc must be housed in the exclusive cartridge and the cartridge must be loaded into the player. The feature of the ACD-5B cartridge is that it can be used to house and store the disc, and loaded as such into the player.

Procedure

① Housing and Removing Disc

1. To house the disc in the cartridge, open the cover in the direction of the arrow, then insert the disc with the labelled side (printed side) facing upward.
2. To remove the disc from the cartridge, hold the center hole of disc with one finger and another along the outside of the disc.
   Note: Be careful not to touch the recorded surface of the disc, or fingerprints may cause skips.



② Loading the Cartridge

Load the cartridge in the direction of the arrow (↑).
(Check that the cartridge is placed in the proper direction.)

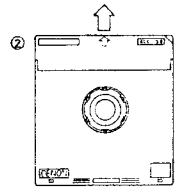


Figure 7

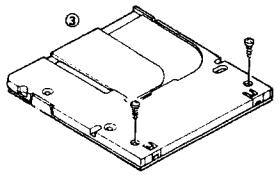
③ Fastening the Cartridge Top Cover

Put the included screw (M2x4 CBTS-P) through the back of the cartridge and tighten it into the top cover so that the cartridge will not open.



④ Indicates the position for attaching the title label

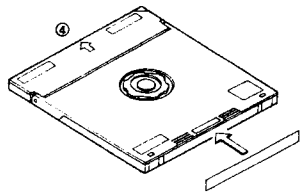


Figure 8

Note:

1. Do not subject the cartridge to strong shocks or drop it from high places, or this may damage it.
2. Do not store for long periods of time in hot, humid places or in direct sunlight, as this may cause the cartridge to change colors or warp.

5) Loading and Unloading the Cartridge

① Loading the Cartridge

Load the cartridge slowly and firmly.

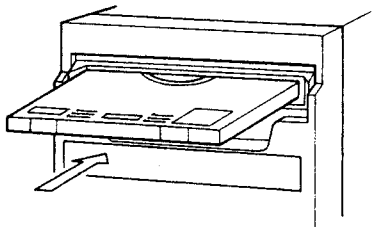
Insert the cartridge into the cartridge tray by pressing on the front center.

When it is fully inserted, the cartridge tray is lowered and the disc is loaded.

Note:
- Be sure to load the cartridge in the proper direction.
- Only use DENON-specified cartridges. Otherwise, the loading mechanism or disc may be damaged.
- When the disc is housed improperly in the cartridge, the "TRACK No." displays "00" after the cartridge is loaded into the unit.
- If the disc is dirty or scratched, the player will not cue the beginning of the track when the cartridge is loaded. In this case, error message numbers ("84","85","86","87" or "88") will be displayed on the SEC windows to show kind of failure. If this happens, house the disc properly or replace the disc.

② Unloading the cartridge

To unload the cartridge, gently lift the lower center part of the protruding portion of the cartridge tray. The cartridge tray will rise to its original position and the cartridge will be pushed out from the cartridge tray, at which point it can be removed.



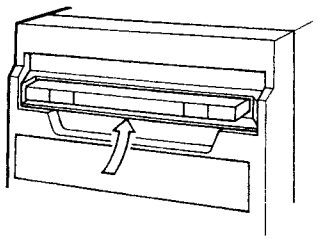


Figure 9

3 BASIC OPERATION

1) Before Starting

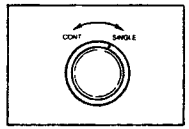
① Turn the power on.

② Load a cartridge.

③ Set the presettings according to the purpose. (Refer to "Presettings" on Page 6.)

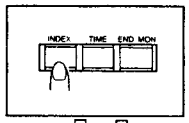
* Steps ② and ③ above can be performed in reverse order.

2) Selecting the Play Mode

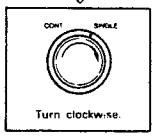


- Set the PLAY MODE selector to SINGLE or CONT.

3) Selecting Tracks



- Set the track selection mode. (The IDX LED should be off.) If the IDX LED is on, press the INDEX button to turn it off.



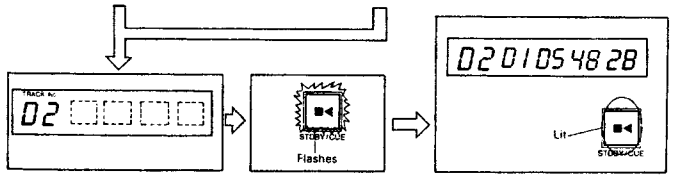
The track number changes as follows (for a disc containing four tracks):

→ 01 → 02 → 03 → 04 →

The track number changes as follows (for a disc containing four tracks):

← 01 ← 02 ← 03 ← 04 ←

* If the SELECT knob is pressed in and turned, the track number increases or decreases by 10 tracks per step.



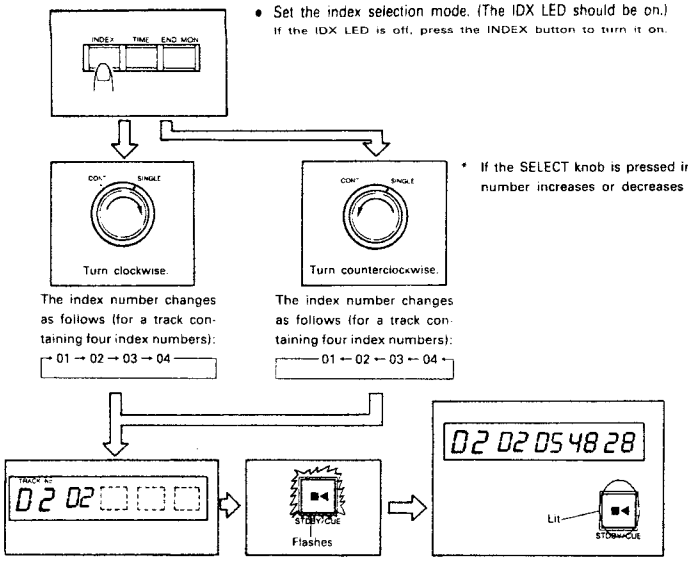
- When a track is selected, that track number is displayed. (In this case track 2 is selected.)
- The STDBY/CUE indicator flashes during the search operation.
- When the search operation is completed, the time is displayed and the STDBY/CUE indicator stops flashing, remaining lit.

Figure 10

- If the selected track does not exist on the disc, the TRACK No. display flashes. Check the track numbers.

4) Selecting the Index Number

There is no need to select index numbers when starting from the beginning of a track.



- Set the index selection mode. (The IDX LED should be on.)
  If the IDX LED is off, press the INDEX button to turn it on.

* If the SELECT knob is pressed in and turned, the index number increases or decreases by 10 index per step.

The index number changes as follows (for a track containing four index numbers):
→ 01 → 02 → 03 → 04 →

The index number changes as follows (for a track containing four index numbers):
← 01 ← 02 ← 03 ← 04 ←

- When an index number is selected, that index number is displayed. (In this case index number 2 is selected.)
- The STDBY/CUE indicator flashes during the search operation.
- When the search operation is completed, the time is displayed and the STDBY/CUE indicator stops flashing, remaining lit.

Figure 11

- If the selected index number does not exist on that track, the INDEX display flashes. Check the index numbers.
- Select the index number after selecting the track. If a track is selected after an index number, that index number is cleared.

5) Starting Playback

Playback starts when the PLAY/PAUSE button is pressed during the pause or standby.
(Playback starts with no time delay, so songs can be switched smoothly.)

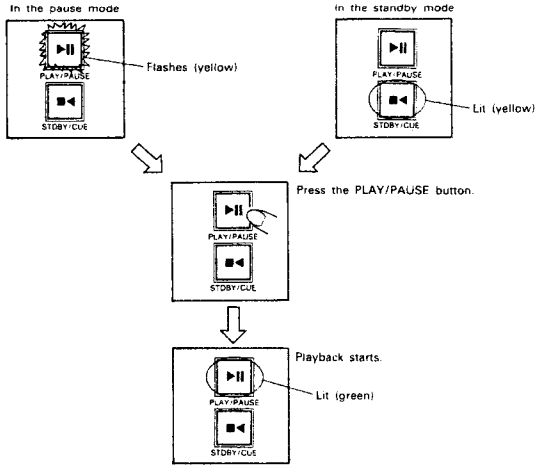


Figure 12

6) Stopping Playback

Playback can be stopped in the middle of a track either by pausing or by back-cuing.

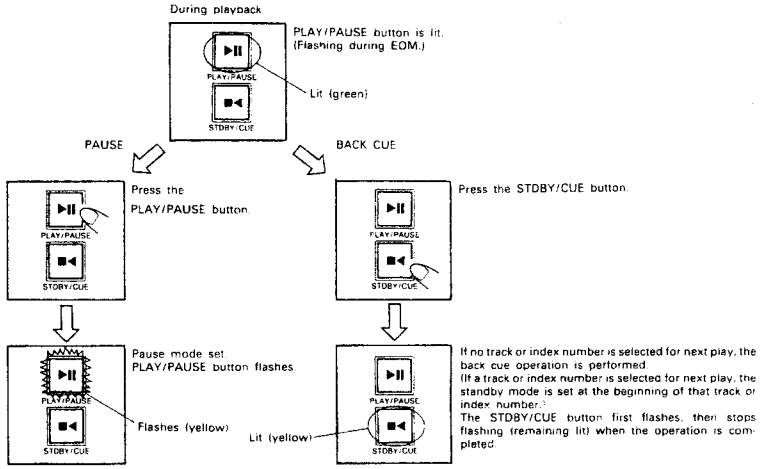

Figure 13

7) Description of the PLAY/PAUSE, and STDBY/CUE Operations

- Each press of the PLAY/PAUSE button causes the operation to change from play to pause or from pause back to play.
- The play operation of this CD player is performed via DSP (Digital Signal Processor) and memory, so the audio starts instantly after the PLAY/PAUSE button is pressed.
- Pressing the STDBY/CUE button during disc play resets the CD to the position at which play was started. (This is called the back cue function.)

The steps through which disc play is performed when the PLAY/PAUSE and STDBY/CUE buttons are pressed are described with the aid of the following illustrations in Figures 14 through 16.

PLAY and PAUSE

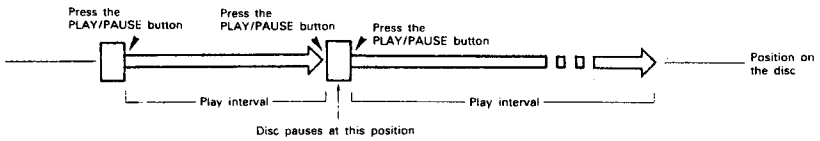

Figure 14

Pressing the PLAY/PAUSE button starts the disc play, the advancement of which is illustrated by the arrows of Figure 14. Pressing the PLAY/PAUSE button again during disc play causes the play operation to pause, and pressing this button once more causes the disc to be played again.

PLAY and CUE

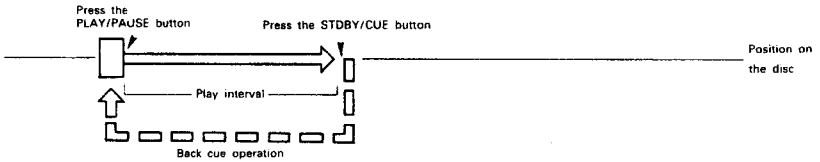

Figure 15

Pressing the PLAY/PAUSE button starts the disc. Pressing the STDBY/CUE button will reset the disc to the position where play was started. By alternately pressing the PLAY/PAUSE button and the STDBY/CUE button, the disc may be played from the same position any number of times. This function is called back cue.

PLAY, PAUSE, and CUE

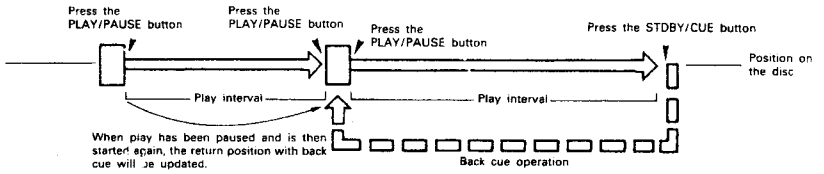

Figure 16

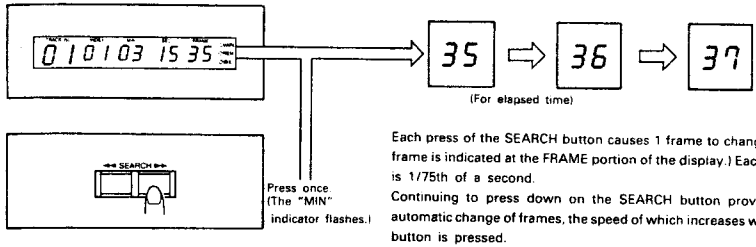
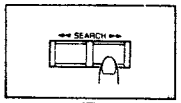
8) Moving the Play Start Position

When a track is selected and the PLAY/PAUSE button is pressed, playback begins from the beginning of that track. To start from a different position, use the following procedure to find the desired position.

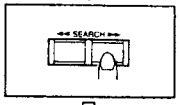


Each press of the SEARCH button causes 1 frame to change. (The frame is indicated at the FRAME portion of the display.) Each frame is 1/75th of a second.
Continuing to press down on the SEARCH button provides an automatic change of frames, the speed of which increases while the button is pressed.



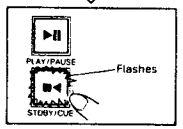
While monitoring the sound, press the SEARCH button until you come close to the desired position, in the track. Holding the SEARCH button down allows "course" searching.

One press at a time

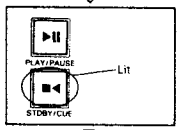


While monitoring the sound, press the SEARCH button a number of times to find the desired position.
This allows "fine" searching.

If you go past the desired position, return by pressing the ◀◀ button a few times to back up.



When the desired start position has been found, press the STDBY/CUE button.
The sound will mute and the light of the STDBY/CUE button will flash.
When the STDBY/CUE button stops flashing, playback is ready.



Pressing the PLAY/PAUSE button will start the play operation.
The PLAY/PAUSE button will light steadily.

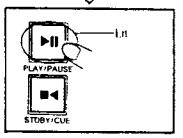


Figure 17

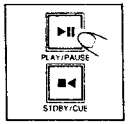
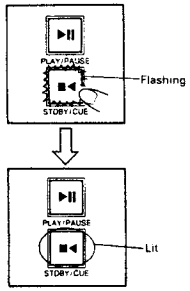
9) Checking the Play Start Position

After selecting the track or after changing the play start position with the SEARCH button, use the following procedure to repeatedly check the position at which play will start.



Press the PLAY/PAUSE button.
Check that play will start from the desired position.

> **NOTE:**
> Once you have set up a new start position within a track, do not press the PAUSE or SEARCH buttons. Pressing these buttons will change your start position.



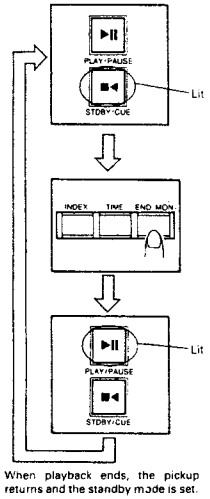
Press the STDBY/CUE button after checking the start position.
The player will return to the position where play was started.
When the STDBY/CUE button stops flashing, it is ready to start again.

If the play start position is not to your liking, use the search function to change the position.

Figure 18

10) End Monitor

The end section of a track can be played at the touch of a button.
This function comes in very handy to check how the track ends.

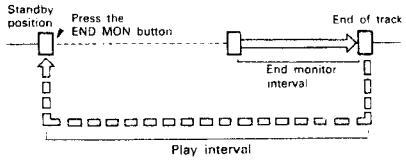


In the standby mode
The STDBY/CUE button is lit.

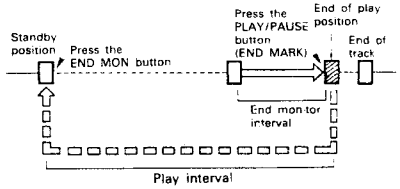
Press the END MON button.

The end of the track at which the standby mode is set is played.
Playing time: 0 to 35 seconds in 5-second steps can be presetting. (Refer to "Presetting" on page 6)

NORMAL END MONITOR



END MARK PLAY SETTING



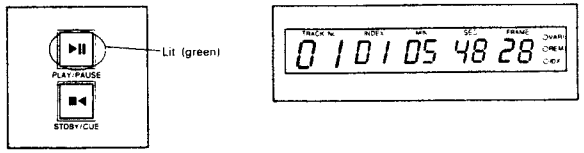
- Set preset switch d6-6 ("End Mark") to the on position.
- When the PLAY/PAUSE button is pressed during the end monitor interval, the end mark is memorized at that position and that position becomes the end of play position.
- The disc can now be played from the standby position to the end of play position.
  The time indication shows the time of this interval.

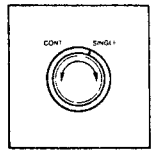
Figure 19

11) Selecting the Track to be Played Next During Playback

The next track to be played can be selected during playback by turning the SELECT knob when in the track selection mode.

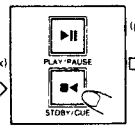
During playback of track 1 (for example)





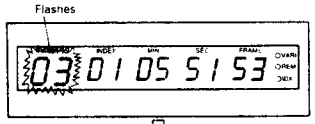
Check that the track selection mode is set (the IDX LED should be off).
Turn the SELECT knob.

(during playback)



(playback interrupted)
The beginning of the selected track is found and the standby mode is set.

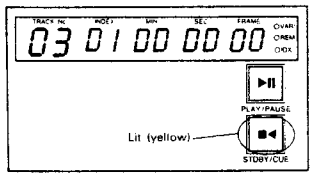
When the track 3 is selected.



The number of the selected track is displayed on the "TRACK No." indicator.
* If the track currently playing is selected, the "TRACK No." indicator flashes rapidly to indicate that the selected track is the track which is currently playing.

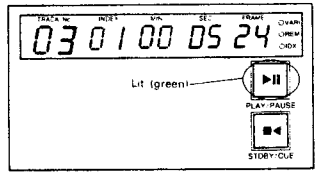
(Playback of track 1 ends)

When the play mode is set to "SINGLE":



As soon as track 1 ends, the beginning of the track selected during playback is found and the standby mode is set.

When the play mode is set to "CONT.":



As soon as track 1 ends, playback of the track selected during playback begins.

Figure 20

12) Selecting the Index Number to be Played Next During Playback

The next index number to be played can be selected during playback by turning the SELECT knob when in the index number selection mode.

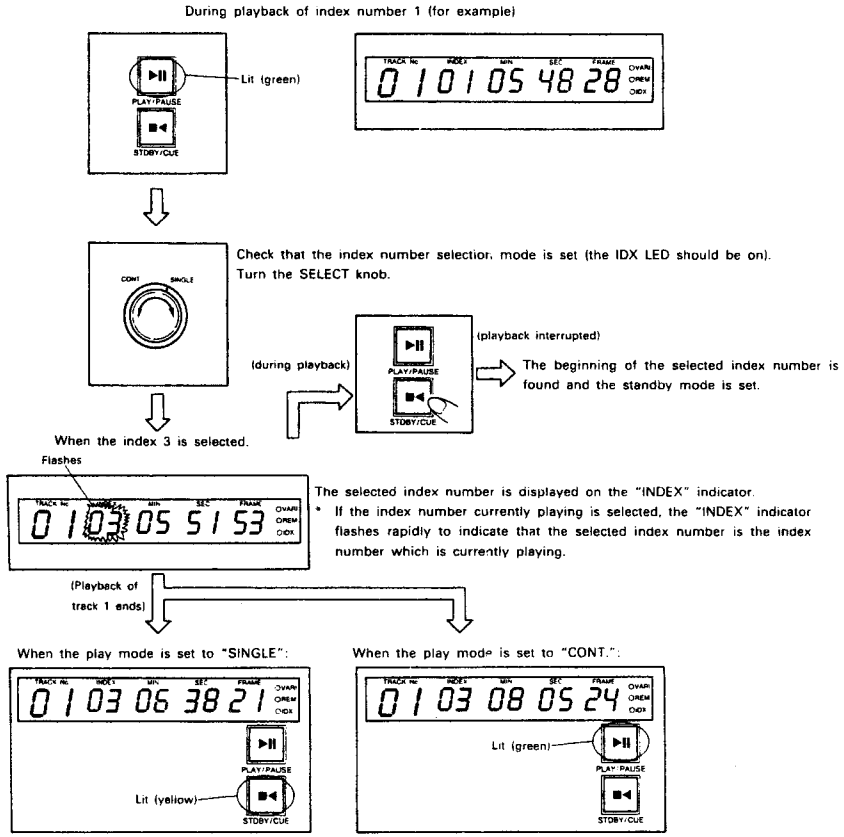


Figure 21

• The "INDEX" indicator flashes if the track does not contain the selected index number.

13) Ending Playback

The position of the pickup and the display when playback ends differ according to the play mode and the preset settings. The table below describes the status when playback ends.

(**NOTE**: This is only for when no other track or index number has been selected during playback.)

		NEXT TRACK STANDBY [d4-8] OFF	NEXT TRACK STANDBY [d4-8] ON
SINGLE MODE	[d2-5] RE CUE OFF	Playback start position — Track end position; Playback section (within one track). The PLAY/PAUSE button flashes (yellow), the time display turns off, and the pickup stops at the track end position.	Playback start position — Track end position; Playback section (within one track) — Next track start position. The standby mode is set at the next track.
	[d2-5] RE CUE ON	Playback start position — Track end position; Playback section (within one track). The pickup returns to the play start position and the standby mode is set.	
CONTINUE MODE	[d2-5] RE CUE OFF	Playback start position — Last track end position; Playback section. The PLAY/PAUSE button flashes (yellow), the time display turns off, and the pickup stops at the track end position.	Track one start position — Playback start position — Last track end position; Playback section. The pickup returns to track one and the standby mode is set.
	[d2-5] RE CUE ON	Playback start position — Last track end position; Playback section. The pickup returns to the play start position and the standby mode is set.	

Figure 22

14) Resetting the Microprocessor

The player's disc drive unit, control panel unit and display are controlled by microprocessor.

If for any reason the microprocessor should malfunction and the player should not operate, press the SELECT knob and STDBY/CUE button simultaneously.

The microprocessor is reset and the player is restored to the same conditions as when the power is turned on.

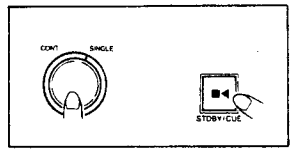

Figure 23

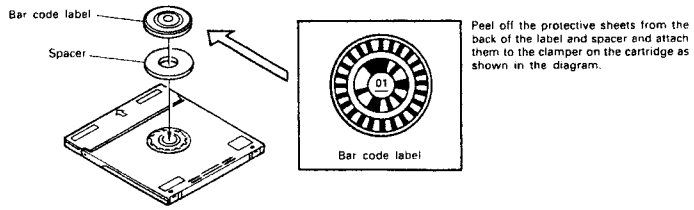
4 BAR CODE AUTO TRACK SELECT SYSTEM

1) This system is for performing the operations described below when a special bar code label is attached to the CD cartridge. (The bar code labels are sold separately.)

① Selecting a certain track automatically (EX and PR)

② Prohibiting selection/playback of a certain track (LO)



Peel off the protective sheets from the back of the label and spacer and attach them to the clamper on the cartridge as shown in the diagram.

Figure 24

2) Selection modes and operations

EX • When the cartridge is loaded, the standby mode is set at the track selected by the bar code label.
• Other tracks cannot be selected even by turning the SELECT knob.

PR • When the cartridge is loaded, the standby mode is set at the track selected by the bar code label.
• If the SELECT knob is turned and another track is selected, the standby mode is set at that track.

LO • When the cartridge is loaded, the standby mode is set at the first track on the disc.
• The SELECT knob can be turned to select other tracks, but the track prohibited by the bar code label cannot be selected.
• If the pickup is moved using the SEARCH buttons, the PLAY/PAUSE and STDBY/CUE buttons will not function at the track prohibited by the bar code label.
* To move the pickup to a position outside the track prohibited by the bar code label, either keep pressing one of the SEARCH buttons or select another track.

3) Selectable track number range:

Tracks 01 to 30 (same for the EX, PR and LO modes)

4) Types of bar code label sets (sold separately)

There are six types of sets, as follows:

Product number	Name	Description
SGK0038	BAR CODE-EX	EX, one label each for tracks 01 to 30 + 30 spacers
SGK0039	BAR CODE-PR	PR, one label each for tracks 01 to 30 + 30 spacers
SGK0040	BAR CODE-LO	LO, one label each for tracks 01 to 30 + 30 spacers
SGK0048	BAR EX-01-03	EX, ten labels each for tracks 01, 02 and 03 + 30 spacers
SGK0049	BAR EX-04-06	EX, ten labels each for tracks 04, 05 and 06 + 30 spacers
SGK0050	BAR EX-07-09	EX, ten labels each for tracks 07, 08 and 09 + 30 spacers

5 CLEANING THE OPTICAL PICKUP LENS

If the optical pickup lens is dirty, noise may enter the output signals and the sound may skip. Clean the optical pickup periodically, about once every 10 days.
The DENON AMC-9 Lens Cleaner is available for cleaning the lens.
Use the following procedure to clean the lens with the AMC-9 Lens Cleaner:

- When the "POWER" is off, insert the cleaner into the player unit, touch its knob, place your forefinger and move it from side to side several times.
- When the "POWER" is on, move the knob to the left and wait until the player's "TRACK No" display changes from "–" to "00" after inserting the cleaner, for approx. 30 secs, and move it from side to side several times.

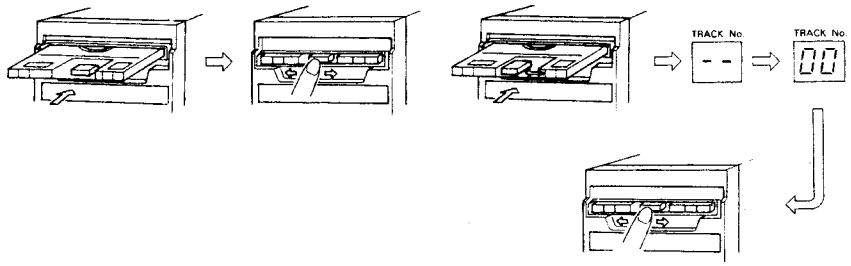


Figure 25

6 COMPACT DISCS

1. Precautions on handling compact discs
- Do not allow fingerprints, oil or dust to get on the surface of the disc.
  If the disc is dirty, wipe it off with a soft dry cloth.
  We recommend using DENON's AMC-20/21 CD CLEANER is recommended.
- Do not use benzene, thinner, water, record spray, electrostatic-proof chemicals, or silicone-treated cloths to clean discs.
- Always use carefully handle discs to prevent damaging the surface; in particular when removing a disc from its case or returning it.
- Do not bend.
- Do not apply heat.
- Do not enlarge the hole in the center of the disc.
- Do not write on the label (printed side) with a hard-tipped implement such as a pencil or ball point pen.
- Condensation will form if a disc is brought into a warm area from a colder one, such as outdoors in winter. Do not attempt to dry the disc with a hair dryer, etc.

2. Precaution on storage
- After playing a disc, always unload it from the player.
- Always store the disc in the cartridge to prevent from dirt or damage.
- Do not place discs in the following areas:
  1) Areas exposed to direct sunlight for a considerable time.
  2) Areas subject to accumulation of dust or high humidity.
  3) Areas affected by heat from indoor heaters, etc.

7 TROUBLESHOOTING

If the player does not seem to be functioning properly, check the following:

Error message lights when cartridge is loaded:
- Disc is not housed correctly in cartridge ..... See page 11
- Disc is dirty or scratched ..... See page 23
- Optical pick-up lens is dirty ..... See page 23

Player does not operate when front panel buttons are pressed.
- SWITCH INHIBIT switch is set to "ON" (INHIBIT) ..... See page 8
- Reset the microprocessor ..... See page 21

After play button is pressed, sound does not reproduce readily.
- Cue level detect switches are not set ..... See page 7

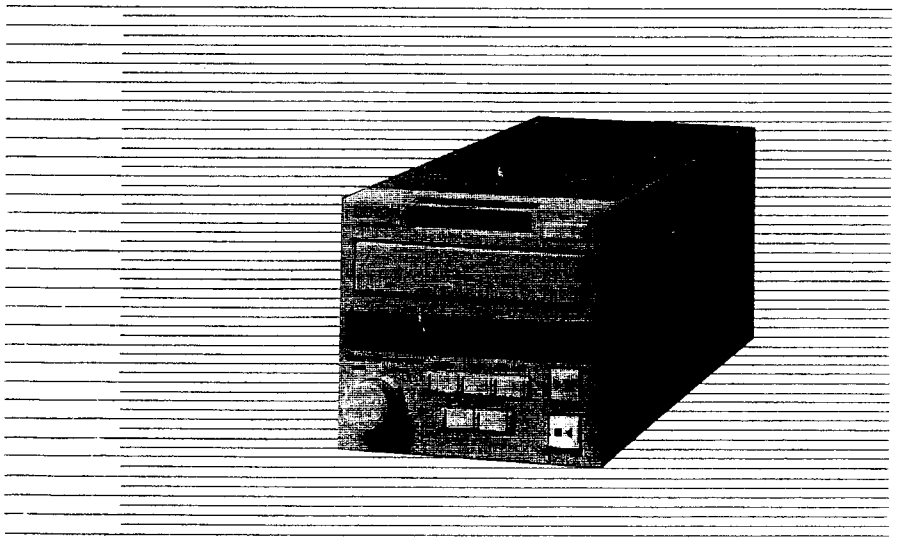
No sound is produced or sound is distorted.
- Output level control is set to MIN ..... See page 5
- Output cord is not properly connected to amplifier ..... See page 10
- Problem with adjustment or settings of amplifier switches.

DENON

CD PLAYER

DN-961FA

OPERATING INSTRUCTIONS



IMPORTANT TO SAFETY

WARNING:

TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

NOTE:
This CD player uses a semiconductor laser. To allow you to enjoy music with stable operation, we recommend to use it in a room whose temperature is between 5°C and 35°C.

Please check to make sure the following items, aside from the main unit, are packed in the carton.

(1) Operating instructions ..... 1 pc.
(2) 3P power supply cord ..... 1 pc.
(3) Spare fuse ..... 1 pc.

CAUTION:

1. **Handle the power supply cord carefully.**
   Do not damage or deform the power supply cord. If it is damaged or deformed, it may cause electric shock or malfunction when using. When disconnecting it from wall outlet, be sure to hold the plug attachment. Do not pull on the cord.
2. **Do not open the top cover.**
   In order to prevent electric shock, do not open the top cover. If problems occur, contact your DENON dealer.
3. **Do not place anything inside.**
   Do not place metal objects or spill liquid inside the CD player, as this may result in electric shocks or malfunction.

Please record and retain the model name and serial number of your set shown on the rating label.

Model No. DN-961FA Serial No. _____

1 GENERAL

Main Features

The DN-961FA CD player is a table-top type CD player designed for use in broadcast stations, for production, etc.

1) A rotary pulse encoder is used for the selector which selects tracks and index numbers, making selection simple.
   When the selector is turned, the track or number display changes, the search operation starts immediately, and the pickup moves quickly to the play start position.
2) Playback signals are output immediately when the play mode is set.
   In addition, delay start can be preset.
3) The play time display can be switched between the remaining time and the elapsed time, depending on the purpose.
4) When the STDBY/CUE button is pressed during playback, the pickup moves to the position at which the play mode was last set and the standby mode is set, making it simple to check the track which is playing.
5) The last section of that track can be monitored by pressing the END MON (end monitor) button during the standby mode.
6) An E.O.M. (End of Message) signal can be emitted when near the end of playback to warn that playback is about to end.
7) The pickup can be moved to any position on the disc using the manual search operation.
8) The signals for the left and right channels can be mixed for mono output.
9) The playing speed can be varied within the range of 0 to +3%, by 0.2% step.
10) Discs recorded on the CD cart recorder (DN-7700R) and not including TOCs can be played.
11) The player can be controlled externally via both parallel and serial remote connectors.
12) The player can be connected to the fader switch on a mixing control console and fade-started.

2 DESCRIPTION OF THE FUNCTION

1) Names and Functions of the Parts

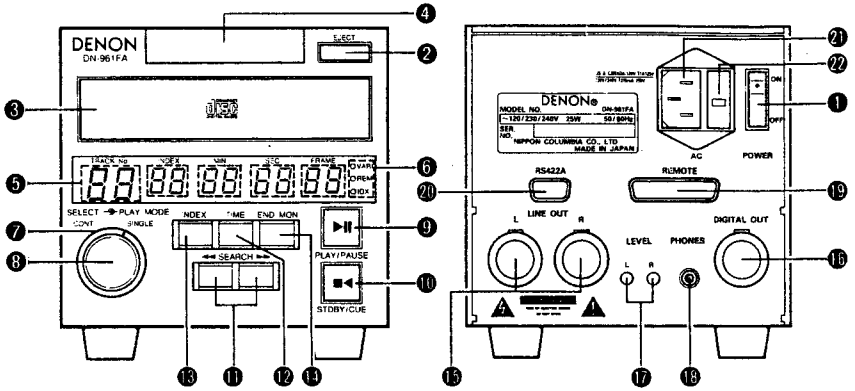

Figure 1

❶ **POWER (Power Switch)**
The power turns on when the POWER switch is set to the ON side, and turns off when the switch is set to the OFF side.

❷ **EJECT (Eject Button)**
Press this to open the disc holder.
The disc holder does not open if this button is pressed during the play mode.

❸ **Disc Holder**
This is where discs are loaded.

❹ **Disc Window**
The tray is visible, making it easy to check whether or not a disc is loaded and turning, etc.

❺ **Display**
The display window includes the "TRACK No.", "INDEX", "MIN", "SEC", and "FRAME" displays, and the "REM", "VARI", and "IDX" LEDs.

❻ **"VARI", "REM" and "IDX" indicators**
VARI: This lights when the playing speed is set at anything other than standard. (Refer to presetting on Page 9).
REM: This lights when the remaining time is displayed.
IDX: This lights when in the index selection mode.

❼ **PLAY MODE (Play Mode Switch)**
This is for switching the play mode between the single track mode (SINGLE) and continuous play mode (CONT.).

❽ **SELECT (Selector Knob)**
This knob is used to select track and index numbers.

❾ **PLAY/PAUSE (Play/Pause Button)**
This button is pressed to start playback, or during playback to set the pause mode.

❿ **STDBY/CUE (Standby/Cue Button)**
When this button is pressed during playback, the pickup returns to the position at which playback started, the standby mode is set, and the button lights (yellow).

⓫ **SEARCH (Search Buttons)**
These buttons are used to change the position for starting playback.

⓬ **TIME (Time Button)**
This button is used to switch the time display between the elapsed time and remaining time.

⓭ **INDEX (Index Button)**
This button is used to switch between the track selection mode and index number selection mode.

⓮ **END MON (End Monitor Button)**
This button is pressed during the standby mode to play the last section of the track.
* For instructions on setting the playing time, refer to d5-5, 6 and 7 under "Presettings" on Page 9.

⓯ **LINE OUT L/R (Output Connectors)**
1) These are active balanced type outputs using XLR type connectors.
Connect them to balanced type inputs with an impedance of 600 ohms on an amplifier or console.
2) Signal layout
Pin 1 : Common
Pin 2 : Cold
Pin 3 : Hot
3) Applicable connector: Cannon XLR-3-11C or the equivalent
NOTE: Do not short-circuit the hot or cold pin with the common pin.

⓰ **DIGITAL OUT (Digital Output Connector)**
1) This is an active balanced type output using an XLR type connector.
Connect it to the balanced type digital input on an amplifier or console.
2) Signal layout
Pin 1 : Common
Pin 2 : Cold
Pin 3 : Hot
3) Applicable connector: Cannon XLR-3-11C or the equivalent
NOTE: When using the digital output, set preset item d3-8 to "1".

⓱ **LEVEL L/R (Output Level Controls)**
These adjust the level of the audio signals output from the LINE OUT L/R ⓯ connectors.

⓲ **PHONES (Headphones Jack)**
Connect headphones with an impedance of 30 to 40 ohms.

⓳ **REMOTE (Remote Control Connector)**
1) This is a connector for parallel remote connection. The player can be controlled remotely with a dry contact circuit connection.
2) Applicable connector: 25-pin D-sub plug
3) Signal layout

Pin No.		Signal	I/O	Level
1		FG	–	
	14	PLAY TALLY	O	TTL (Iol=48 mA)
2		PLAY COMMAND	I	HCMOS (Ii=–3 mA)
	15	PAUSE TALLY	O	TTL (Iol=48 mA)
3		PAUSE COMMAND	I	HCMOS (Ii=–3 mA)
	16	STDBY/CUE TALLY	O	TTL (Iol=48 mA)
4		STDBY/CUE COMMAND	I	HCMOS (Ii=–3 mA)
	17	INDEX 2/3 TALLY	O	TTL (Iol=48 mA)
5		TRACK (+) COMMAND	I	HCMOS (Ii=–3 mA)
	18	NC	–	
6		TRACK (–) COMMAND	I	HCMOS (Ii=–3 mA)
	19	NC	–	
7		SEARCH (FWD) COMMAND	I	HCMOS (Ii=–3 mA)
	20	NC	–	
8		SEARCH (REV) COMMAND	I	HCMOS (Ii=–3 mA)
	21	NC	–	
9		FADER START	I	PHOTO COUPLER (I=–10 mA)
	22	TALLY POWER SUPPLY	O	+5 V, 20 mA
10		COMMAND COMMON	–	
	23	COMMAND COMMON	–	
11		NC	–	
	24	E.O.M./INDEX 2/INDEX 3	O	DRY CONTACT
12		NC	–	
	25	E.O.M./INDEX 2/INDEX 3	O	DRY CONTACT
13		NC	–	

⓴ **RS422A (Remote Control Connector)**
1) This is a connector for serial remote connection. The player can be connected to and controlled from a personal computer or other external controller.
2) Applicable connector: 9-pin D-sub plug
3) Baud rate: 9600bps
4) Signal layout

Pin No.		Signal	I/O	Level
1		F.GROUND	–	
	6	S.GROUND	–	
2		TxD (RETURN)	O	RS422A
	7	TxD	O	RS422A
3		RxD	I	RS422A
	8	RxD (RETURN)	I	RS422A
4		NC	–	
	9	NC	–	
5		NC	–	

㉑ **AC (AC Inlet)**
Insert the included power cord here.

㉒ **Fuse Holder**
- To replace the fuse, use small screwdrivers, etc., to push the catches (A) and (B) at the top and bottom of the holder inward and remove the fuse holder outward.
- Replace the old fuse with one with the rating indicated on the panel.
Type of fuse: T1.00 A 125 V for 120 V operation
T315 mA 250 V for 230/240 V operation

• PRESET VOLTAGE CHANGE
DN-961FA allows selection of either 120 V, 230 V or 240 V operation. The unit has been preset at 240 V prior to shipment except for U.S.A. & Canada. In order to use the unit at 120 V or 230 V, follow the procedures below.
1. The fuse holder serves as a voltage selector.
2. Turn the voltage selector block so that the proper voltage setting (120 or 230) appears in the indication window and refit it.
Be sure to replace a fuse described in the above when operate the unit with 120 V.
3. Press in the fuse holder back to the main body. Make sure of the click action of the fixing tabs for secure fitting.

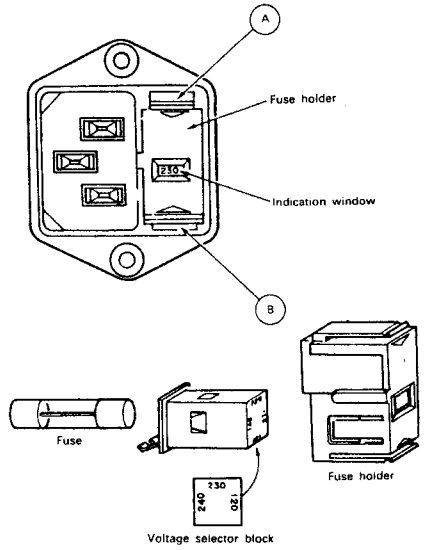

Figure 2

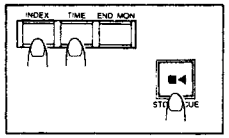
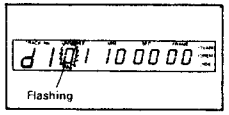
2) Presettings

- Setting procedure

①



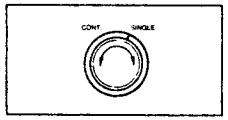


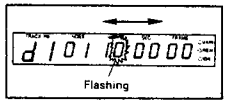
- The presettings can only set when the disc holder is open or when disc is loaded and in the standby mode.
  Press the STDBY/CUE button once while holding in the INDEX and TIME buttons. The "d1" preset mode (for example d 1 01 10 00 00) appears on the display, and the settings can now be changed.
  (The LED flashes where you can change modes.)

- To change the setting from "d1" to "d2", "d3", etc., press the STDBY/CUE button the number of times necessary while holding in the INDEX and TIME buttons.

  → d1 → d2 → d3 → d4 → d5 → d6 → d7 ——
  ——————————— End of preset setting mode ———————————

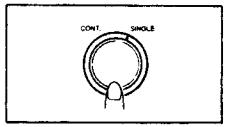
②

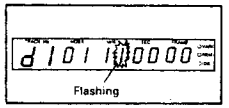




- Turn the SELECT knob to change the position which is flashing.
  The flashing position moves to the right when the knob is turned clockwise, and to the left when the knob is turned counterclockwise.

③





- Press the SELECT knob to change the "0" or "1" setting.
  The INDEX × 10 indicator on the display window changes from "0" to "1".
  Press the knob again to change the setting back from "1" to "0".

- [1] indicates the setting is turned on.
  [0] indicates the setting is turned off.
  Set to on or off as necessary for that function.

Figure 3

To turn off the preset setting mode:
Repeat step ① above, press the STDBY/CUE button until "d7" is displayed, then press it once again. The new preset setting mode is memorized. The display reads as it was before the settings were started.

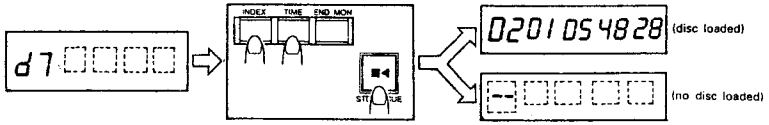


Figure 4

	1	1	1	247 msec

[d2-1] FRAME DISPLAY
[0]: Frame not displayed during playback.
* [1]: Frame displayed during playback.

[d2-2] INITIAL DISPLAY
[0]: Elapsed time displayed when power turned on.
* [1]: Remaining time displayed when power turned on.

[d2-4] END DETECT
[0]: Track ends not detected during search operation.
* [1]: Track ends detected during search operation.

[d2-5] RE CUE
* [0]: Stop mode set when playback ends.
[1]: When playback ends, pickup returns to starting position and standby mode set.

[d2-6] PLAY LOCK
* [0]: Buttons other than the ones below also function during playback.
[1]: Buttons other than the PLAY MODE, TIME, PLAY/PAUSE and RESET buttons do not function during playback.

[d2-7] FLASH
[0]: PLAY indicator remains turned off (without flashing) during EOM operation, PAUSE indicator remains turned off when playback ends, and STDBY/CUE indicator remains turned off during search operation.
* [1]: PLAY indicator flashes during EOM operation, PAUSE indicator flashes when playback ends, and STDBY/CUE indicator flashes during search operation.

[d3-1] REMOTE INHIBIT
* [0]: "REMOTE" command accepted.
[1]: "REMOTE" command not accepted.

[d3-2] SWITCH INHIBIT
* [0]: No front panel buttons other than PLAY MODE, TIME and RESET buttons function.
[1]: All buttons function.

[d3-3, 4 and 5] E.O.M.: (PLAY/PAUSE button flashes green)

	[d3-3]	[d3-4]	[d3-5]	E.O.M. time setting
	0	0	0	E.O.M. not output
	1	0	0	5 sec
*	0	1	0	10 sec
	1	1	0	15 sec
	0	0	1	20 sec
	1	0	1	25 sec
	0	1	1	30 sec
	1	1	1	35 sec

[d3-8] DIGITAL OUT
* [0]: Standard playback mode.
Only audio data output from digital output.
[1] Digital output priority mode.
Audio data and subcodes output from digital output.
DSP functions (FADE IN, MONO) inhibited.

[d4-1] TEST
* [0]: Standard playback mode. (Always leave this at [0]. The player cannot be used if set to [1].)

[d4-2] VARIABLE SPEED ENABLE
* [0]: Discs played at standard speed.
[1]: Discs played at speed set by variable speed presetting [d6-1, 2, 3 and 4].

[d4-5, 6] DELAY START:

	[d4-5]	[d4-6]	Delay start time setting
*	0	0	0 msec
	1	0	100 msec
	0	1	200 msec
	1	1	300 msec

[d4-7] CDR DISC
* [0]: Mode for playing normal discs including TOCs. (Discs without TOCs cannot be played.)
[1]: Discs recorded on a CD recorder (DN-7700R, etc.) without TOCs can be played.

[d4-8] NEXT TRACK STANDBY
* [0]: When playback ends, next operation performed according to "RE CUE" setting.
[1]: When playback ends, standby mode set at next track. ("RE CUE" setting ignored.)

[d5-1] INDEX INHIBIT
* [0]: Index numbers can be selected.
[1]: Index numbers cannot be selected.

[d5-2] INDEX 3/2
[0]: "INDEX 2 TALLY" output from REMOTE connector pins 24 and 25. (Not valid when [d5-3] set to [1].)
* [1]: "INDEX 3 TALLY" output from REMOTE connector pins 24 and 25. (Not valid when [d5-3] set to [1].)

[d5-3] EOM/INDEX
* [0]: "INDEX TALLY" (set by INDEX 3/2 [d5-2]) output from REMOTE connector pins 24 and 25.
[1]: "EOM TALLY" output from REMOTE connector pins 24 and 25.

[d5-4] FADER START MODE SELECT
[0]: Player starts when fader switch turned on.
* [1]: Player starts when fader switch turned on, set to pause mode when fader switch turned off.

[d5-5, 6 and 7] END MONITOR:

	[d5-5]	[d5-6]	[d5-7]	End monitor time setting
	0	0	0	End monitor off.
	1	0	0	5 sec
*	0	1	0	10 sec
	1	1	0	15 sec
	0	0	1	20 sec
	1	0	1	25 sec
	0	1	1	30 sec
	1	1	1	35 sec

[d5-8] INDEX 2
* [0]: "INDEX 3 TALLY" output from REMOTE connector pin 17.
[1]: "INDEX 2 TALLY" output from REMOTE connector pin 17.

[d6-1, 2, 3 and 4] VARIABLE SPEED: This sets the playing speed within a range of 0 to 3% when [d4-2] is set to [1].

	[d6-1]	[d6-2]	[d6-3]	[d6-4]	Playback speed
	0	0	0	0	0.0% (Standard speed)
	1	0	0	0	+0.2%
	0	1	0	0	+0.4%
	1	1	0	0	+0.6%
	0	0	1	0	+0.8%
	1	0	1	0	+1.0%
	0	1	1	0	+1.2%
	1	1	1	0	+1.4%
	0	0	0	1	+1.6%
	1	0	0	1	+1.8%
*	0	1	0	1	+2.0%
	1	1	0	1	+2.2%
	0	0	1	1	+2.4%
	1	0	1	1	+2.6%
	0	1	1	1	+2.8%
	1	1	1	1	+3.0%

[d6-5] SKIP TRACK
[0]: Skip track playback as set in the TOC is possible when playing CDR discs.
* [1]: Skip track playback as set in the TOC is not possible when playing CDR discs.

[d6-6] END MARK
* [0]: The track end position does not change even if the PLAY/PAUSE button is pressed during the end monitor mode.
[1]: The position at which the PLAY/PAUSE button is pressed during the end monitor function becomes the track end position.

[d7] PLAYER ID: Set to 4-bit (binary) to control the player with commands including IDs from the RS-422A connector.
* When several units are connected via the RS-422A connector, separate IDs must be set for each of them.

	[d7-1]	[d7-2]	[d7-3]	[d7-4]	ID
*	0	0	0	0	0
	1	0	0	0	1
	0	1	0	0	2
	1	1	0	0	3
	0	0	1	0	4
	1	0	1	0	5
	0	1	1	0	6
	1	1	1	0	7
	0	0	0	1	8
	1	0	0	1	9
	0	1	0	1	10
	1	1	0	1	11
	0	0	1	1	12
	1	0	1	1	13
	0	1	1	1	14
	1	1	1	1	15

- **Resetting to the default settings**
Turn the POWER switch on while holding in the INDEX and TIME buttons.
All values are reset to the values indicated on the "Table of preset functions".

3) Connections

3)-1 Output signal connections

① Analog output signal connections
Connect the player's output connectors (LINE OUT L and R) ⓮ to the balanced inputs on an amplifier or console using 3-pin cords.

② Digital output signal connections
To use the digital output, connect the player's output connector (DIGITAL OUT) ⓭ to the balanced digital input on an amplifier or console using a 3-pin cord.

NOTES:
1) When using the digital output, set preset item d3-8 to "on".
2) To send the digital output to an unbalanced circuit, do so via a balanced/unbalanced conversion circuit.

Balanced/unbalanced conversion circuit

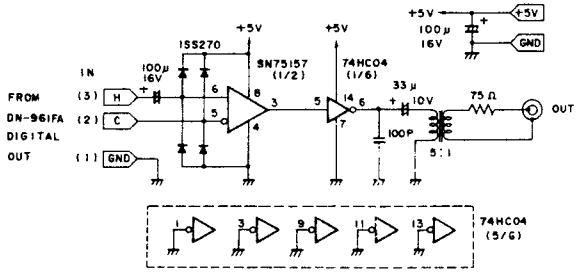

Figure 5

3)-2 Remote signal connections

① Parallel remote signal connections
To use the player remotely, connect the remote connector (REMOTE) ⓰ with the remote control circuit using a 25-pin D-sub cord.

NOTE: When using parallel remote connections, set preset item d3-1 to "off".

② Serial remote signal connections
To use the player connected to a controller or personal computer, connect the remote connector (RS422A) ⓯ to the controller using a 9-pin D-sub cord.

3)-3 Power supply connections

Connect the player to a power supply with the preset voltage (as shown on the fuse holder window) using the included power cord. Make sure the POWER switch is turned off when doing so.

3)-4 Remote control connections

To control the DN-961FA remotely, refer to the example of remote control connections given below.

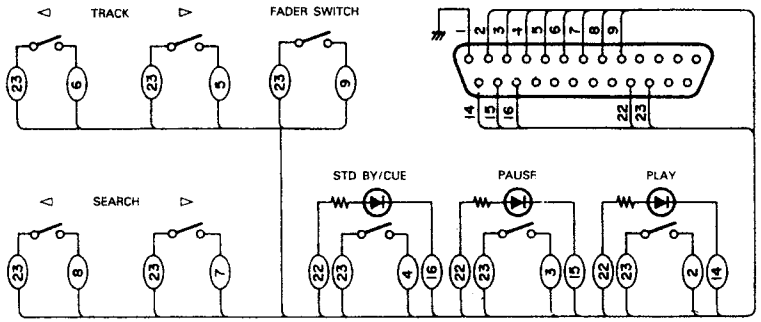

Figure 6

4) Loading and Ejecting the Disc

- If the disc holder is closed, press the EJECT button to open it.

- Place the disc in the disc holder.
NOTES:
  - Make sure the disc holder is fully open when loading discs.
  - Place the disc securely in the tray guide at the center of the disc holder.

- Press the disc holder in by hand to close it.
The disc is loaded and automatically starts turning, the STDBY/CUE button flashes, and search the beginning of the first track or selected track on the disc.

- When the search operation is completed, the time is displayed and the STDBY/CUE button stops flashing, remaining lit.

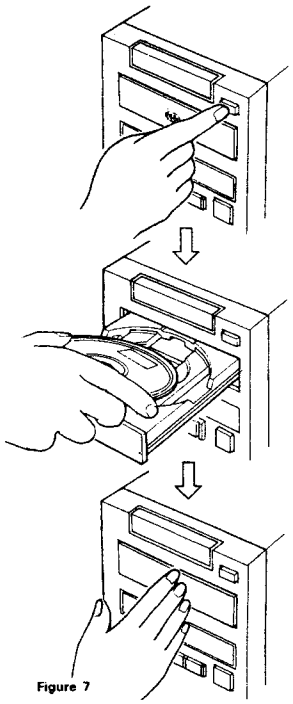

Figure 7

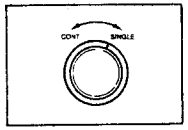
3 BASIC OPERATION

1) Before Starting

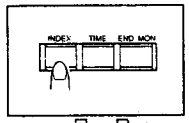
① Turn the power on.
② Load a disc.
③ Set the presettings according to the purpose. (Refer to "Presettings" on Page 6.)
* Steps ② and ③ above can be performed in reverse order.

2) Selecting the Play Mode

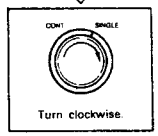


• Set the PLAY MODE selector to SINGLE or CONT.

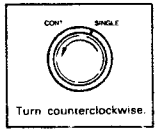
3) Selecting Tracks



• Set the track selection mode. (The IDX LED should be off.)
If the IDX LED is on, press the INDEX button to turn it off.

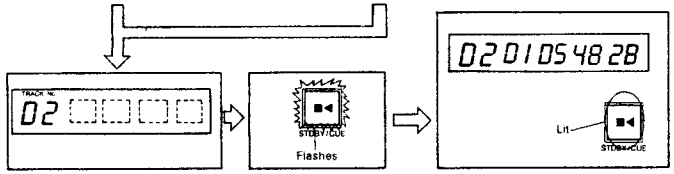


The track number changes as follows (for a disc containing four tracks):
→ 01 → 02 → 03 → 04 →



The track number changes as follows (for a disc containing four tracks):
← 01 ← 02 ← 03 ← 04 ←

* If the SELECT knob is pressed in and turned, the track number increases or decreases by 10 tracks per step.



• When a track is selected, that track number is displayed. (In this case track 2 is selected.)

• The STDBY/CUE indicator flashes during the search operation.

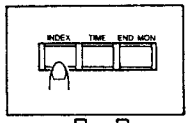
When the search operation is completed, the time is displayed and the STDBY/CUE indicator stops flashing, remaining lit.

Figure 8

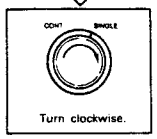
• If the selected track does not exist on the disc, the TRACK No. display flashes. Check the track numbers.

4) Selecting the Index Number

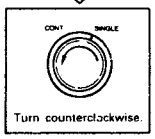
There is no need to select index numbers when starting from the beginning of a track.



• Set the index selection mode. (The IDX LED should be on.)
If the IDX LED is off, press the INDEX button to turn it on.

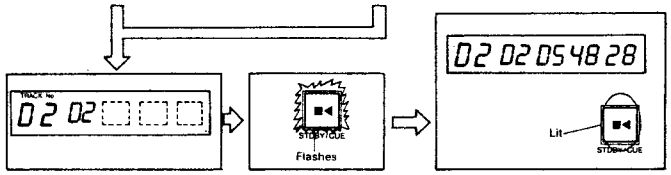


The index number changes as follows (for a track containing four index numbers):
→ 01 → 02 → 03 → 04 →



The index number changes as follows (for a track containing four index numbers):
← 01 ← 02 ← 03 ← 04 ←

* If the SELECT knob is pressed in and turned, the index number increases or decreases by 10 index per step.



• When an index number is selected, that index number is displayed. (In this case index number 2 is selected.)

• The STDBY/CUE indicator flashes during the search operation.

When the search operation is completed, the time is displayed and the STDBY/CUE indicator stops flashing, remaining lit.

Figure 9

• If the selected index number does not exist on that track, the INDEX display flashes. Check the index numbers.
• Select the index number after selecting the track. If a track is selected after an index number, that index number is cleared.

5) Starting Playback

Playback starts when the PLAY/PAUSE button is pressed during the pause or standby.
(Playback starts with no time delay, so songs can be switched smoothly.)

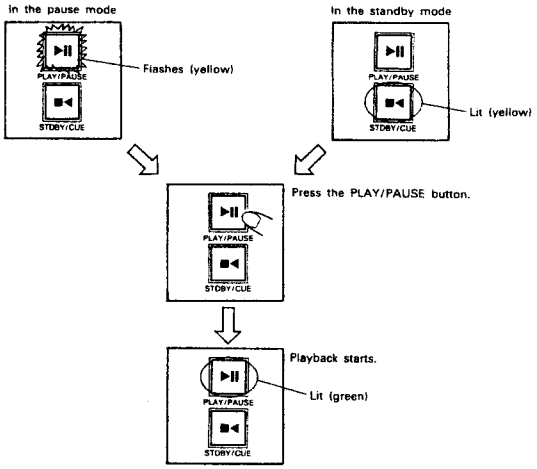


Figure 10

6) Stopping Playback

Playback can be stopped in the middle of a track either by pausing or by back-cuing.

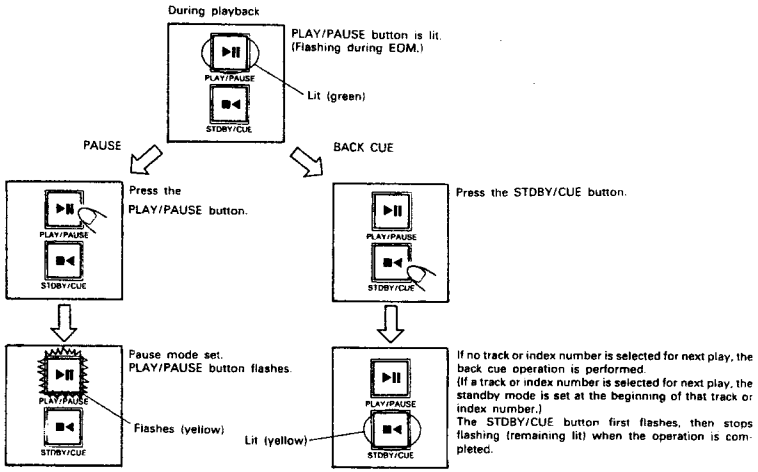

Figure 11

7) Description of the PLAY/PAUSE, and STDBY/CUE Operations

- Each press of the PLAY/PAUSE button causes the operation to change from play to pause or from pause back to play.
- The play operation of this CD player is performed via DSP (Digital Signal Processor) and memory, so the audio starts instantly after the PLAY/PAUSE button is pressed.
- Pressing the STDBY/CUE button during disc play resets the CD to the position at which play was started. (This is called the back cue function.)

The steps through which disc play is performed when the PLAY/PAUSE and STDBY/CUE buttons are pressed are described with the aid of the following illustrations in Figures 12 through 14.

PLAY and PAUSE

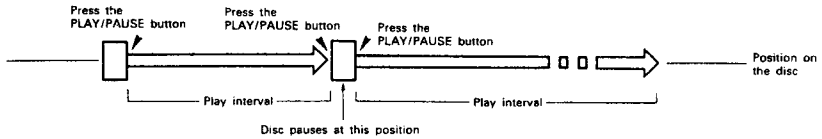

Figure 12

Pressing the PLAY/PAUSE button starts the disc play, the advancement of which is illustrated by the arrows of Figure 14. Pressing the PLAY/PAUSE button again during disc play causes the play operation to pause, and pressing this button once more causes the disc to be played again.

PLAY and CUE

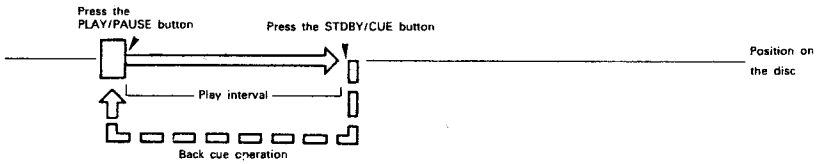

Figure 13

Pressing the PLAY/PAUSE button starts the disc. Pressing the STDBY/CUE button will reset the disc to the position where play was started. By alternately pressing the PLAY/PAUSE button and the STDBY/CUE button, the disc may be played from the same position any number of times. This function is called back cue.

PLAY, PAUSE, and CUE

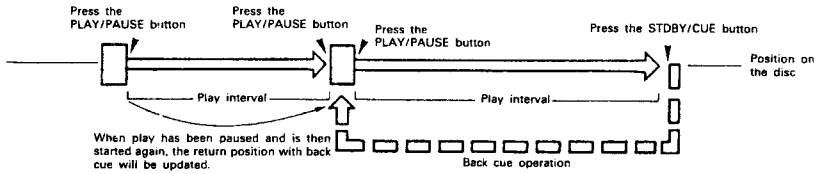

Figure 14

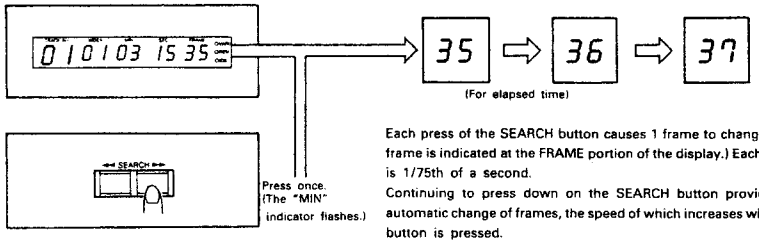
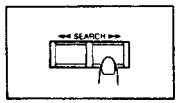
8) Moving the Play Start Position

When a track is selected and the PLAY/PAUSE button is pressed, playback begins from the beginning of that track. To start from a different position, use the following procedure to find the desired position.

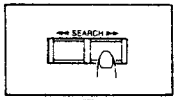


Each press of the SEARCH button causes 1 frame to change. (The frame is indicated at the FRAME portion of the display.) Each frame is 1/75th of a second.
Continuing to press down on the SEARCH button provides an automatic change of frames, the speed of which increases while the button is pressed.



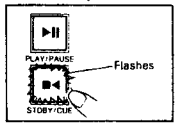
While monitoring the sound, press the SEARCH button until you come close to the desired position, in the track. Holding the SEARCH button down allows "course" searching.

One press at a time

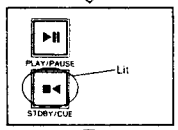


While monitoring the sound, press the SEARCH button a number of times to find the desired position.
This allows "fine" searching.

If you go past the desired position, return by pressing the ◀◀ button a few times to back up.



When the desired start position has been found, press the STDBY/CUE button.
The sound will mute and the light of the STDBY/CUE button will flash.
When the STDBY/CUE button stops flashing, playback is ready.



Pressing the PLAY/PAUSE button will start the play operation.
The PLAY/PAUSE button will light steadily.

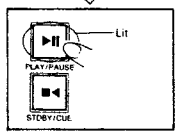


Figure 15

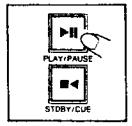
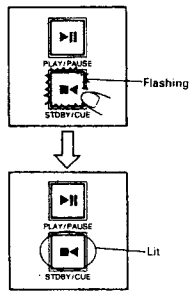
9) Checking the Play Start Position

After selecting the track or after changing the play start position with the SEARCH button, use the following procedure to repeatedly check the position at which play will start.



Press the PLAY/PAUSE button.
Check that play will start from the desired position.

> **NOTE:**
> Once you have set up a new start position within a track, do not press the PAUSE or SEARCH buttons. Pressing these buttons will change your start position.



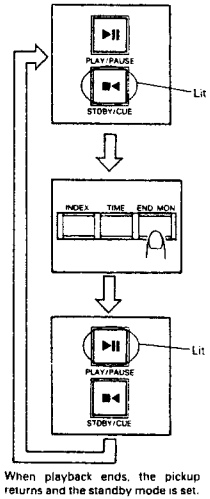
Press the STDBY/CUE button after checking the start position.
The player will return to the position where play was started.
When the STDBY/CUE button stops flashing, it is ready to start again.

If the play start position is not to your liking, use the search function to change the position.

Figure 16

10) End Monitor

The end section of a track can be played at the touch of a button.
This function comes in very handy to check how the track ends.

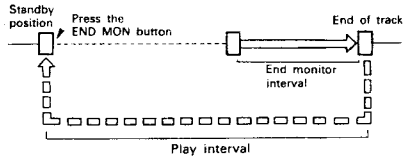


In the standby mode
The STDBY/CUE button is lit.

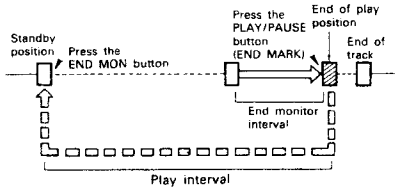
Press the END MON button.

The end of the track at which the standby mode is set is played.
Playing time: 0 to 35 seconds in 5-second steps can be presetting. (Refer to "Presetting" on page 6)

NORMAL END MONITOR



END MARK PLAY SETTING



- Set preset switch d6-6 ("End Mark") to the on position.
- When the PLAY/PAUSE button is pressed during the end monitor interval, the end mark is memorized at that position and that position becomes the end of play position.
- The disc can now be played from the standby position to the end of play position.
  The time indication shows the time of this interval.

Figure 17

11) Selecting the Track to be Played Next During Playback

The next track to be played can be selected during playback by turning the SELECT knob when in the track selection mode.

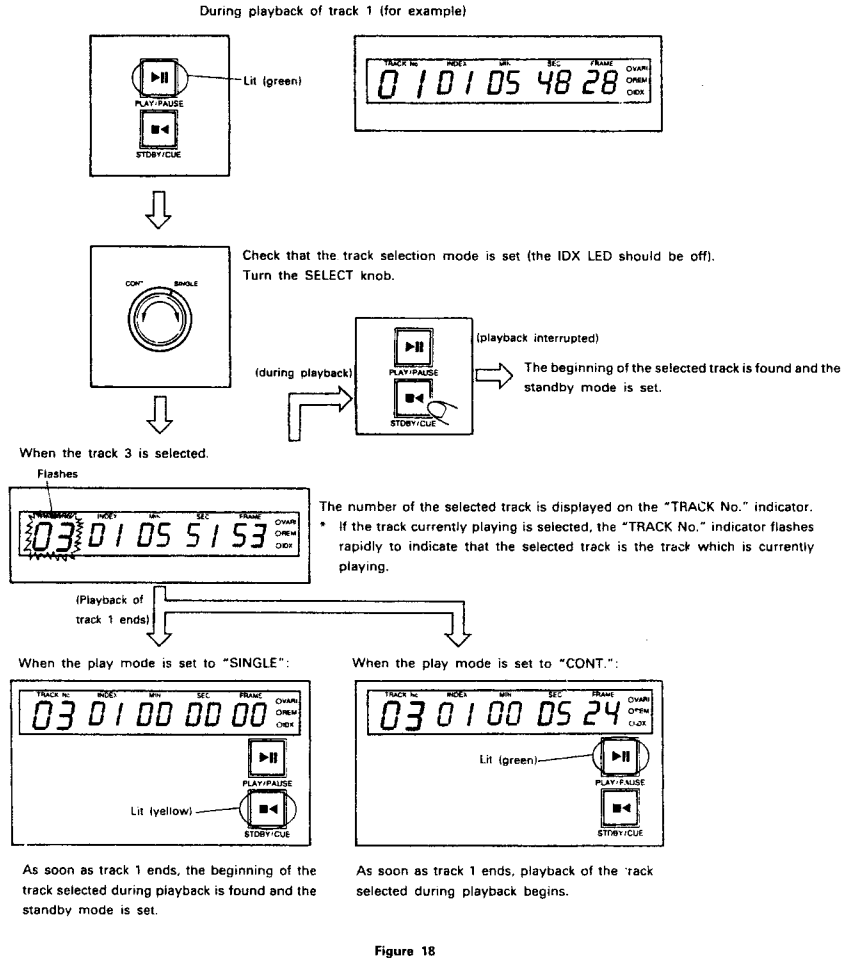


Figure 18

12) Selecting the Index Number to be Played Next During Playback

The next index number to be played can be selected during playback by turning the SELECT knob when in the index number selection mode.

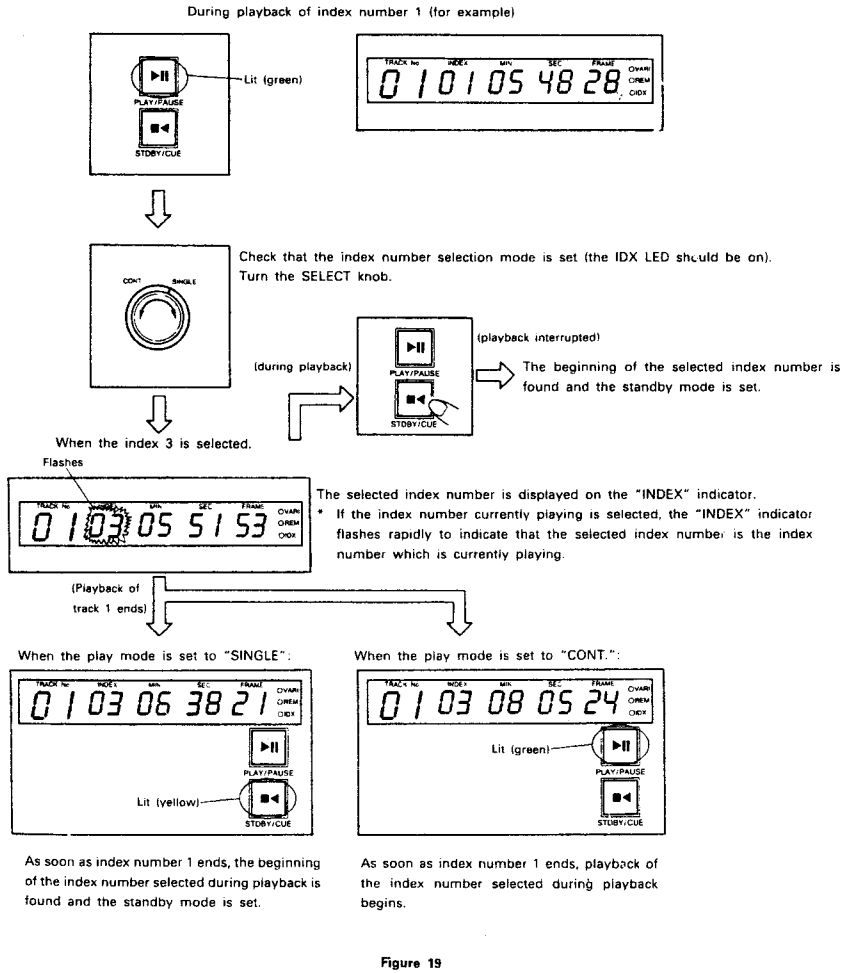

Figure 19

- The "INDEX" indicator flashes if the track does not contain the selected index number.

13) Ending Playback

The position of the pickup and the display when playback ends differ according to the play mode and the preset settings.

The table below describes the status when playback ends.

(**NOTE**: This is only for when no other track or index number has been selected during playback.)

		NEXT TRACK STANDBY [d4-8] OFF	NEXT TRACK STANDBY [d4-8] ON
SINGLE MODE	[d2-5] RE CUE OFF	Playback start position — Track end position; Playback section (within one track) The PLAY/PAUSE button flashes (yellow), the time display turns off, and the pickup stops at the track end position.	Playback start position — Track end position; Playback section (within one track) — Next track start position The standby mode is set at the next track.
	[d2-5] RE CUE ON	Playback start position — Track end position; Playback section (within one track) The pickup returns to the play start position and the standby mode is set.	
CONTINUE MODE	[d2-5] RE CUE OFF	Playback start position — Last track end position; Playback section The PLAY/PAUSE button flashes (yellow), the time display turns off, and the pickup stops at the track end position.	Track one start position — Playback start position — Last track end position; Playback section The pickup returns to track one and the standby mode is set.
	[d2-5] RE CUE ON	Playback start position — Last track end position; Playback section The pickup returns to the play start position and the standby mode is set.	

Figure 20

14) Resetting the Microprocessor

The player's disc drive unit, control panel unit and display are controlled by microprocessor.

If for any reason the microprocessor should malfunction and the player should not operate, press the SELECT knob and STDBY/CUE button simultaneously.

The microprocessor is reset and the player is restored to the same conditions as when the power is turned on.

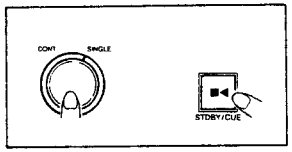

Figure 21

4 COMPACT DISCS

1. **Precautions on handling compact discs**
   - Do not allow fingerprints, oil or dust to get on the surface of the disc.
     If the disc is dirty, wipe it off with a soft dry cloth.
     We recommend using DENON's AMC-20/21 CD CLEANER is recommended.
   - Do not use benzene, thinner, water, record spray, electrostatic-proof chemicals, or silicone-treated cloths to clean discs.
   - Always use carefully handle discs to prevent damaging the surface; in particular when removing a disc from its case or returning it.
   - Do not bend.
   - Do not apply heat.
   - Do not enlarge the hole in the center of the disc.
   - Do not write on the label (printed side) with a hard-tipped implement such as a pencil or ball point pen.
   - Condensation will form if a disc is brought into a warm area from a colder one, such as outdoors in winter. Do not attempt to dry the disc with a hair dryer, etc.
2. **Precaution on storage**
   - After playing a disc, always unload it from the player.
   - Always store the disc in the cartridge to prevent from dirt or damage.
   - Do not place discs in the following areas:
     1) Areas exposed to direct sunlight for a considerable time.
     2) Areas subject to accumulation of dust or high humidity.
     3) Areas affected by heat from indoor heaters, etc.

5 TROUBLESHOOTING

If the player does not seem to be functioning properly, check the following:

Error message lights when disc is loaded:
- Disc is dirty or scratched ..... See page 20

Player does not operate when front panel buttons are pressed.
- SWITCH INHIBIT switch is set to "ON" (INHIBIT) ..... See page 8
- Reset the microprocessor ..... See page 20

After play button is pressed, sound does not reproduce readily.
- Cue level detect switches are not set ..... See page 7

No sound is produced or sound is distorted.
- Output level control is set to MIN ..... See page 5
- Output cord is not properly connected to amplifier ..... See page 10
- Problem with adjustment or settings of amplifier switches.

SPECIFICATIONS

Type:	Table-top CD Cart player (DN-951FA)/ Table-top CD player (DN-961FA)
Audio channels:	2 channels (stereo/mono selectable)
Usable discs:	Philips type compact discs
	8cm-disc compatible (using special adaptor)
Quantization:	16 bits, linear
Sampling frequency:	44.1 kHz
Line output:	Active balanced output
Output level:	+18 dBm (1 kHz, maximum level playback)
Output level variation range:	+18 dBm –20 dBm or greater
Digital output:	AES/EBU format, balanced output
	3 Vp-p, bi-phase
Headphones output:	Stereo (30 to 40 ohms load impedance)
Output level:	20 mW or greater (1 kHz, maximum level playback)
Playing speed:	Standard/0 ~ 3% (presetting in 0.2% steps)
Remote:	Parallel remote, D-sub 25-pin
RS422A:	Serial remote, D-sub 9-pin
Environmental conditions:	Temperature; 5°C ~ 35°C, Humidity; 25% ~ 85% (no condensation)
Duty:	Continuous
Power supply:	AC120/230/240V ±10%, 50/60 Hz
Power consumption:	25 W
External dimensions:	144(W) × 132(H) × 400(D) mm
Weight:	Approx. 5.5 kg
Playback frequency response:	20 Hz ~ 20 kHz within 1 dB range
Signal to noise ratio:	96 dB or greater (with respect to maximum level)
	("A" weighted)
Total harmonic distortion:	0.008% or less (at maximum level, 1 kHz)
Channel separation:	90 dB or greater (at maximum level, 1 kHz)
Audio signal rise time:	30 msec or less

* Design and specifications are subject to change or improvement without notice.

SPECIFICATIONS FOR SERIAL REMOTE

1. APPLICATION

This specification sheet is specified and described for serial input/output of model DN-951FA/961FA CD Player.

2. SPECIFICATIONS TO THE HARDWARE

2.1 Level: RS422A
2.2 Baud Rate 9600 bps
2.3 Connector: D-sub 9 pins (Female)

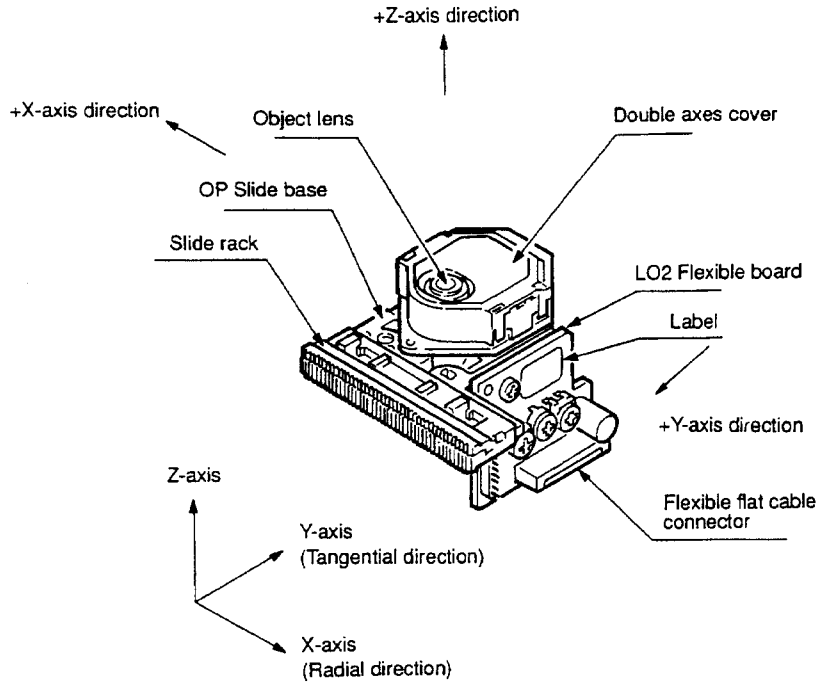
3.3 NOTES FOR DESIGNING THE CONTROLLER

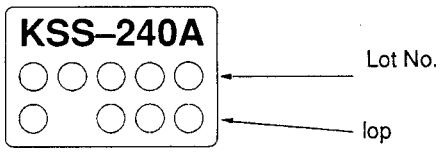
1) Please give attention, that the DN-951FA/961FA do not receive any command for 0.5 sec after power supply "ON" or receive "RESET" [R] command for initializing the unit.
2) Send next command from the controller after receive of "ACKNOWLEDGE" [A] or "INVALID COMMAND" [I] or STATUS CODE when sending the first command.
3) There are some command that may receive only in specified status.

NOTE FOR HANDLING OF LASER PICK-UP

DESCRIPTION OF THE COMPONENTS



Label



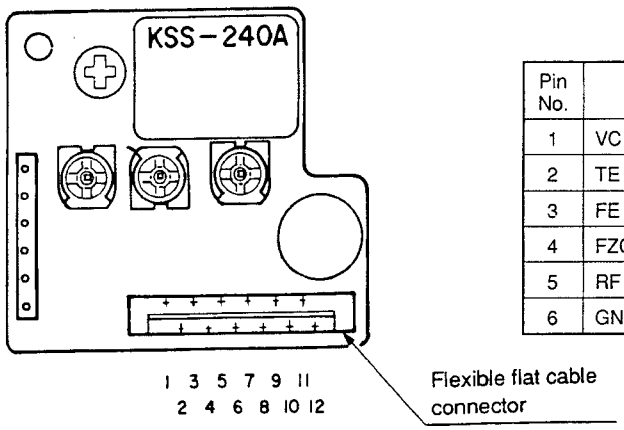
year
(last figure)
day month | quality control No.
○○ ○ ○ ○

but Oct. Nov. and Dec. are expressed by alphabetical letters of X, Y and Z.

10 1 10^{-1}
○ ○ ○ ○
quality control LD drive current

The expressed unit is by mA, with omission of the decimal point as for example, 56.5mA will be expressed as 565, but the head of English letter means the control in the manufacturning plant.

PIN CONNECTOR



Pin No.	Description	Input/ Output	Pin No.	Description	Input/ Output
1	VC (+2.5V)	OUT	7	Vcc (+5V)	IN
2	TE (TRK ER signal)	OUT	8	LDC (LD Control)	IN
3	FE (FCS ER signal)	OUT	9	FCS+ (Double axes)	IN
4	FZC (FZC signal)	OUT	10	TRK+ (Double axes)	IN
5	RF (RF signal)	OUT	11	TRK– (Double axes)	IN
6	GND	IN	12	FCS– (Double axes)	IN

Caution for Handling the Laser Pick-up

The laser pick-up KSS-240A is assembled and precisely adjusted using a sophisticated manufacturing process in our plant. Do not disassemble or attempt to readjust it. Please keep the following instructions carefully in handling pick-up.

1. Handle with Care

(1) Storage
Do not store the pick-up in dusty, high-temperatured or high-humidity environments.

(2) Please take care for preventing from shock by falling down or careless handling.

2. Laser Diode (LD)

(1) Protect your eyes
The laser beam may damage the human eye, since the intensity of the focused spot may reach 7×10^3 W/cm^2 even if the intensity at the objective lens is 400 μW maximum. As the light beam spreads after focused through the objective lens, it does not effect you in the place as far as more than 30 cms. However, do not look at the laser light beam either through the objective lens directly nor another lens or a mirror.

(2) Poison of As
Since the LD chip contains As (Arsenic), as GaAs + GaAlAs, as known as the poison, although the poison is relatively weak, in comparing with others, e.g.As_2O_3, $AsCl_3$ etc., and the amount is small, avoid putting the chip in acid or an alkali solution, heating it over 200°C or putting it into your mouth.

(3) Avoid surge current or electrostatic discharge
The LD may be damaged or deteriorated by its own strong light if a large current is supplied to it, even if only a short pulse.
Make sure that there is no surge current in the LD driving circuit by switches or else. Be careful to handle pick-up as it may be damaged in a moment by human electrostatic discharge. The pins of the LD are short-circuited by solder for protection during shipment.
For safety handling of an LD, grounding the human body, measuring equipments and jig is strongly recommended. And still it is further desirable to make use of mat on the platform and floor for handling the LD.
To open the short-circuit, remove the soldering quickly with a soldering iron whose metal part is grounded.
The temperature of the soldering iron should be less than 320°C (30W).

3. Actuator

(1) The performance of the actuator may be effected if magnetic material is located nearby, since the actuator has a strong magnetic circuit. Do not permit dust to enter through the clearance of the cover.

(2) Cleaning the lens
It may change the specifications by attaching dust or ash on the objective lens. Clean the lens with a cleaning paper dampened with a little water, not pressing lens with so much strength by the cleaning paper.

4. Metal Bearing

As the metal bearing of Cu-compound sintered alloy is impregnated with FROIL946P (*Part No. 529 0054 007), never fail to supply the bushing with the same lubricant at the time of replacing the pick-up.

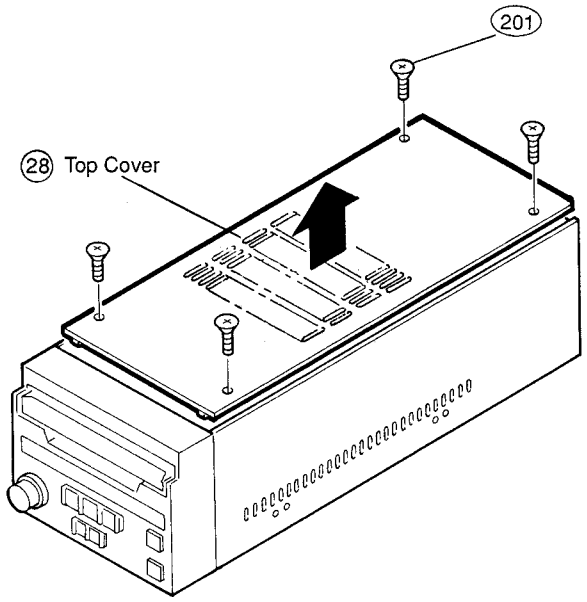
5. Handling

Please handle the laser pick-up with holding the side base (rosin molded part).
When either a part of human body or some other things may happen to touch directly with the circuit part of P.W.Board, it may cause deterioration, take careful attention in handling this base.

DISASSEMBLY [DN-951FA]

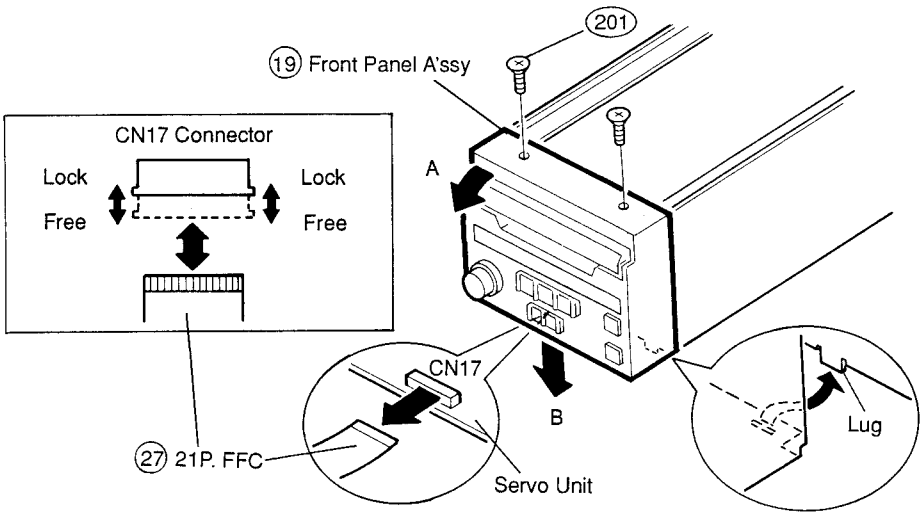
● **TOP COVER**

Remove 4 screw (201) and pull the top cover to arrow direction.



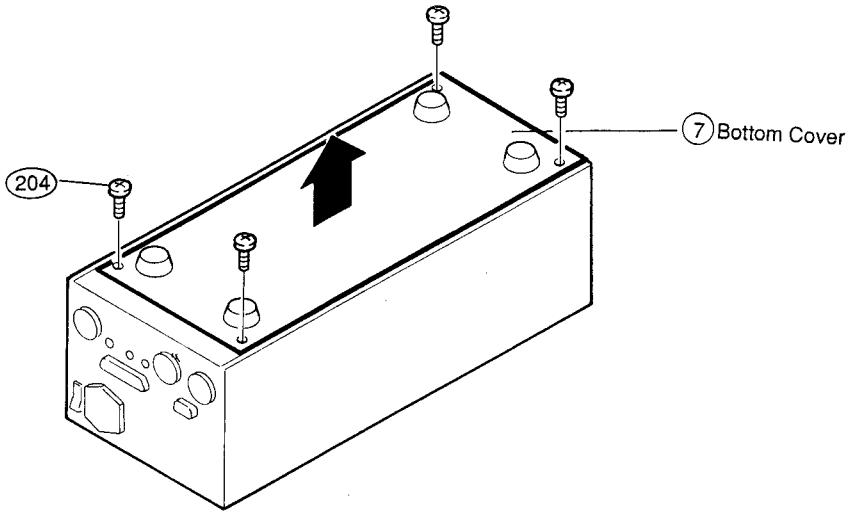
● **FRONT PANEL**

1. Remove 2 screws (201) and detach the front panel in A, B order, and disconnect the CN-17 27 from the SERVO unit.
2. When attach the front panel, set the mecha.chassis lug to front panel assembly groove, as per complementary figure.



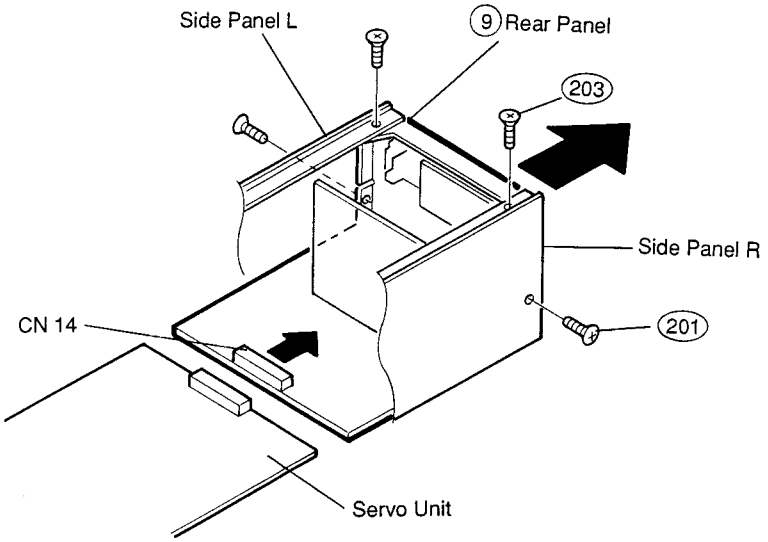
● **BOTTOM COVER**

Remove 4 bottom cover screws (204).



● **REAR PANEL**

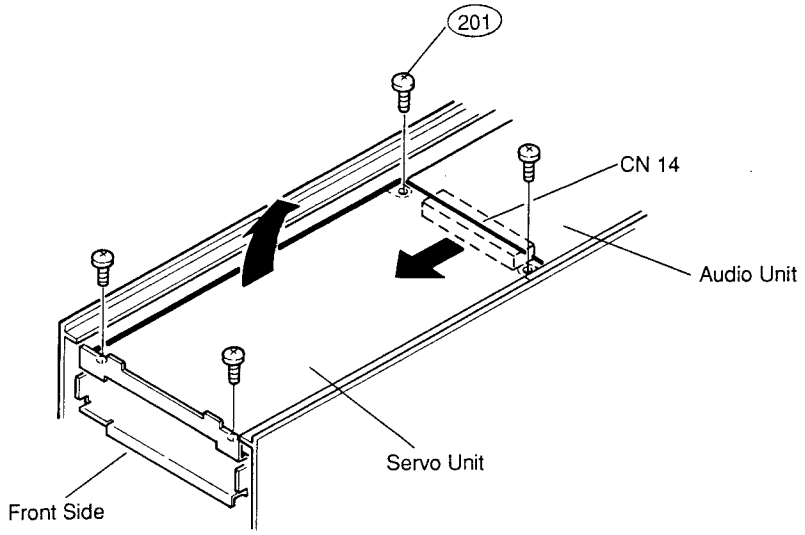
1. Remove 2 screws (201) on both sides, 2 screws (203) on the top.



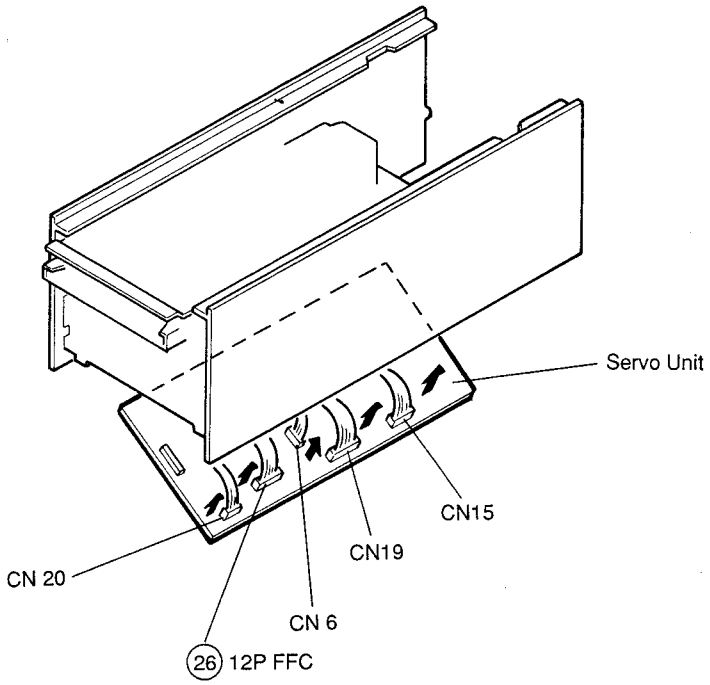
2. Detach portion CN14 of the servo unit and pull it out backwards.
3. Disconnect CN10 (lead wire from the power transformer) of the filter unit.
4. Remove screws of GND wire fixed to the chassis.

● **SERVO UNIT**

1. After removing front panel and bottom cover,remove 4 screws(201) fixing the servo unit.

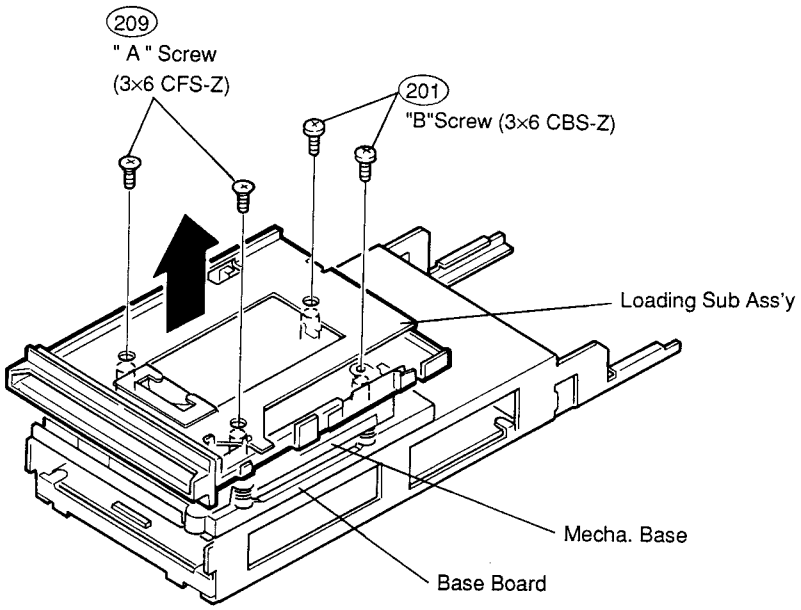


2. Pull out connector portion (CN 14) connected to the audio unit frontwards. Detach the servo unit from mech. chassis.
3. After detaching of the servo unit, disconnect each connector and wires.



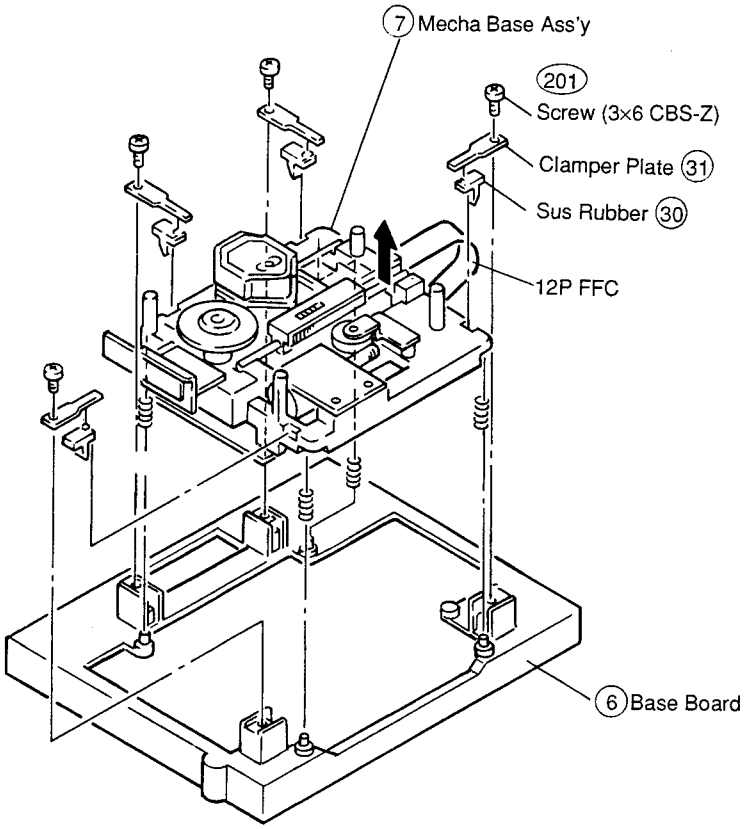
● **LOADING SUB**

Remove 4 screws marked with " A " (209) , " B "(201) and take out the Mecha. base.



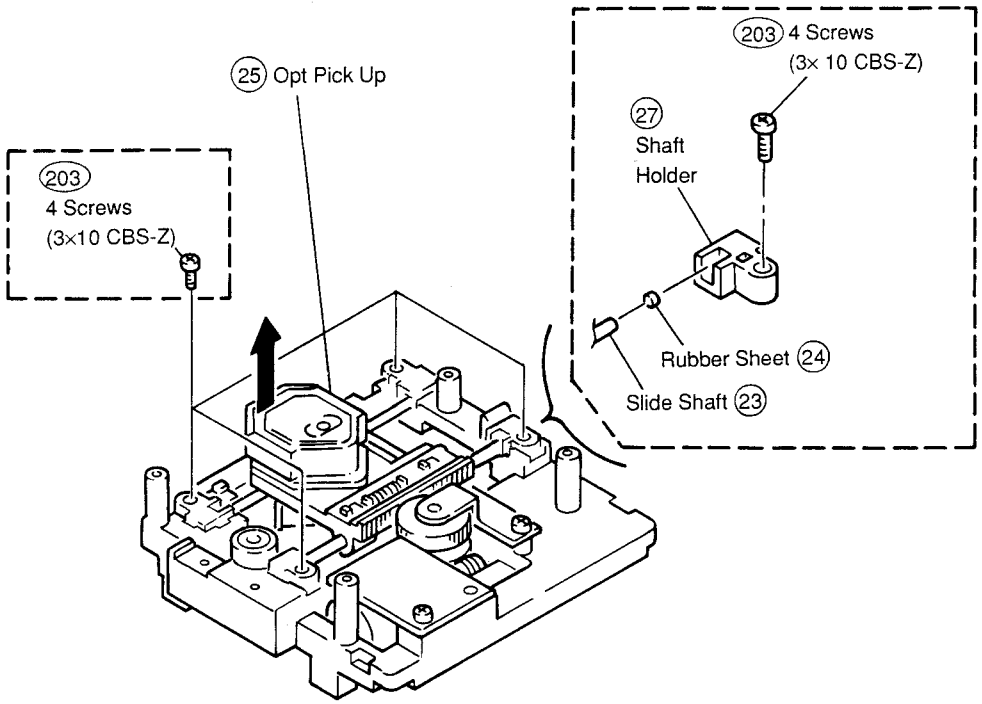
● **MECHANISM-BASE**

Remove 4 screws, disconnect a connector, and pull the mecha base assembly to arrow direction.



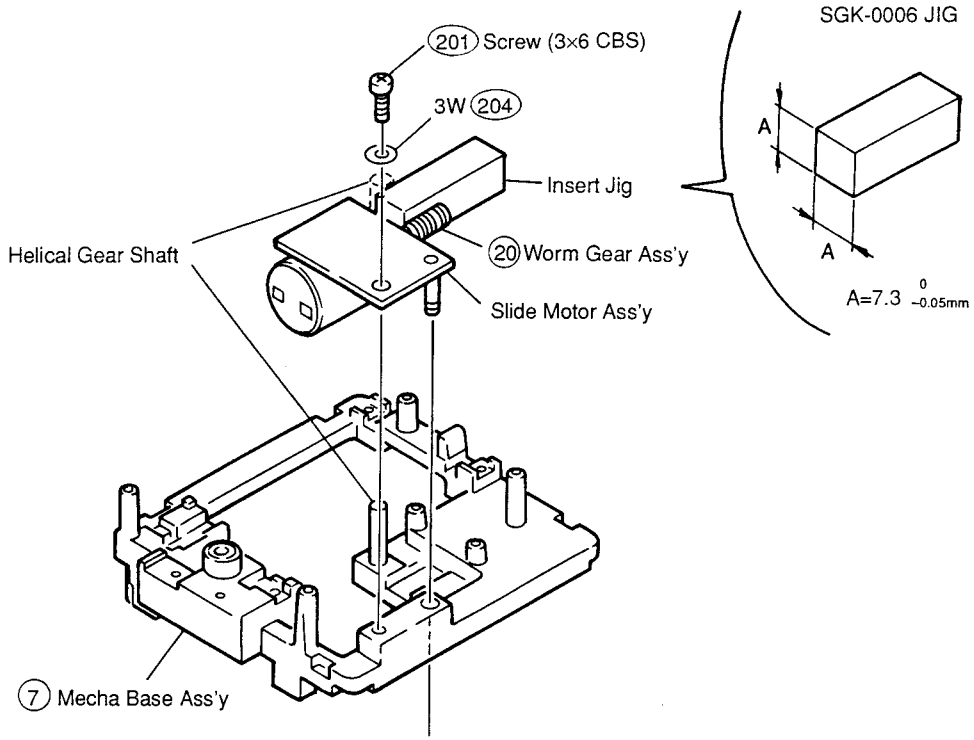
● **OPT. PICKUP**

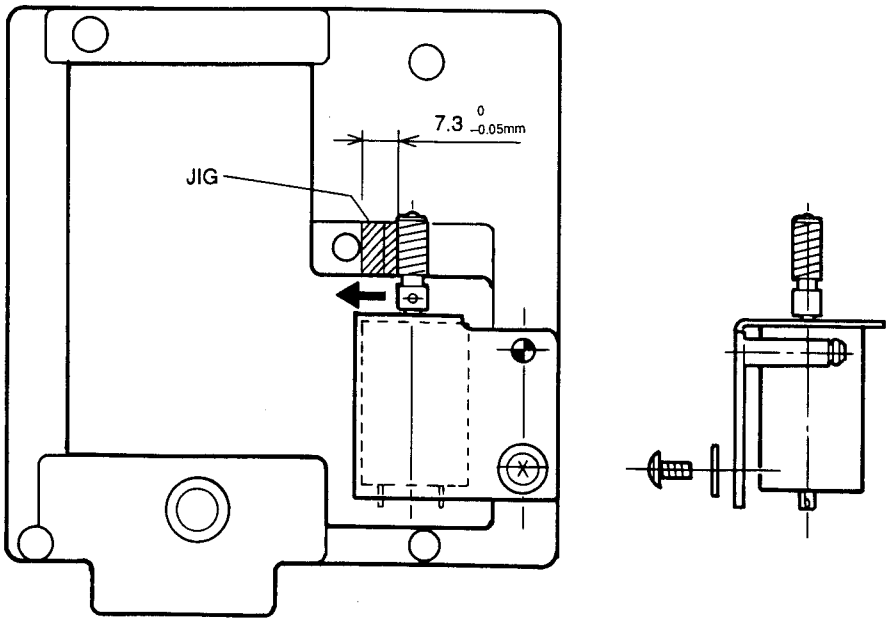
Remove 4 screws (203) and detach the optical pick-up together with slide shafts to arrow direction.



● SLIDE MOTOR

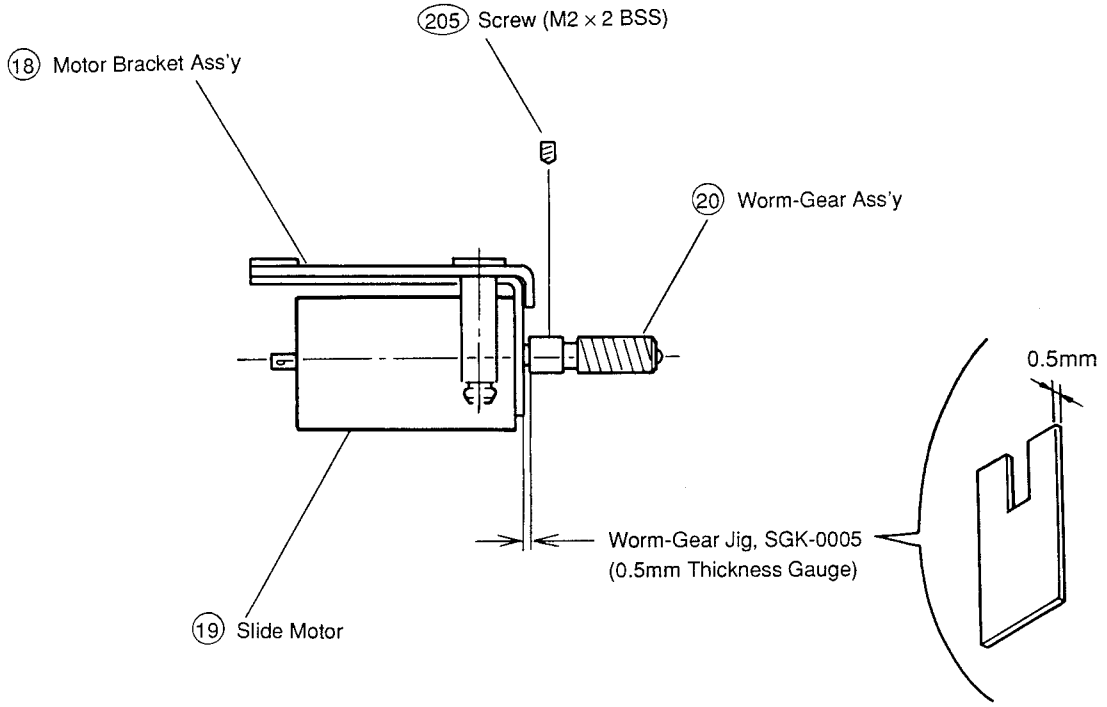
1. Use slide motor jig to install slide motor sub assembly to mecha. base assembly.
2. Assembling procedure
   1) Insert the shaft standing on slide motor sub assembly to the hole on mecha. base assembly loosely.
   2) Screw the slide motor sub assembly to mech. base eassembly loosely.
   3) Place jig between worm-gear and helical-gear shaft, and adjust slide motor sub assembly so that worm-gear, jig and helical-gear shaft touch each other.
   4) Fix the screw firmly and remove the jig.





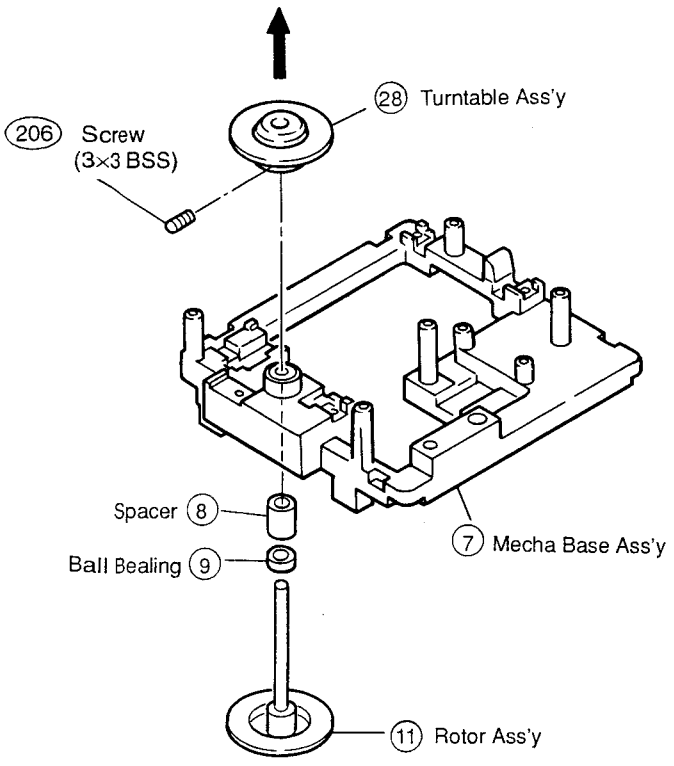
● **TO ATTACH WORM-GEAR TO SLIDE MOTOR SHAFT**

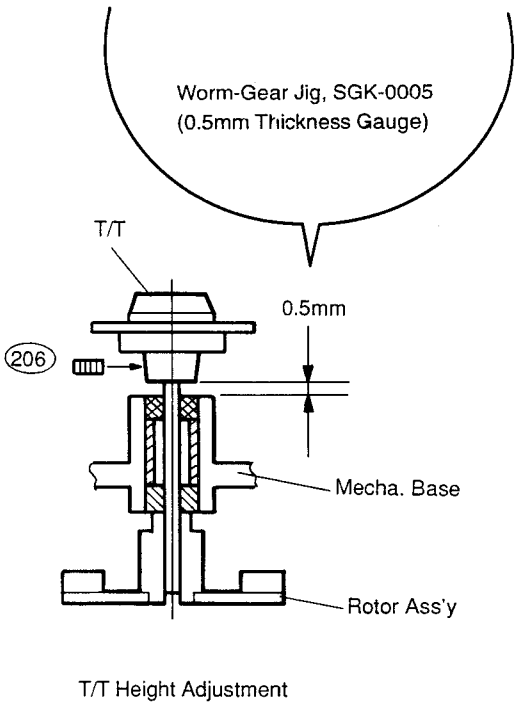
To attach Worm-Gear Ass'y to Slide-Motor shaft, insert the Jig between Worm-Gear Ass'y and Motor Bracket Ass'y and fix worm-gear fixing screw so that 0.5 mm gap is maintained.



● **TURNTABLE**

Loosen one BSS (3× 3) screw of turntable assembly, and pull the turntable assembly to arrow direction.

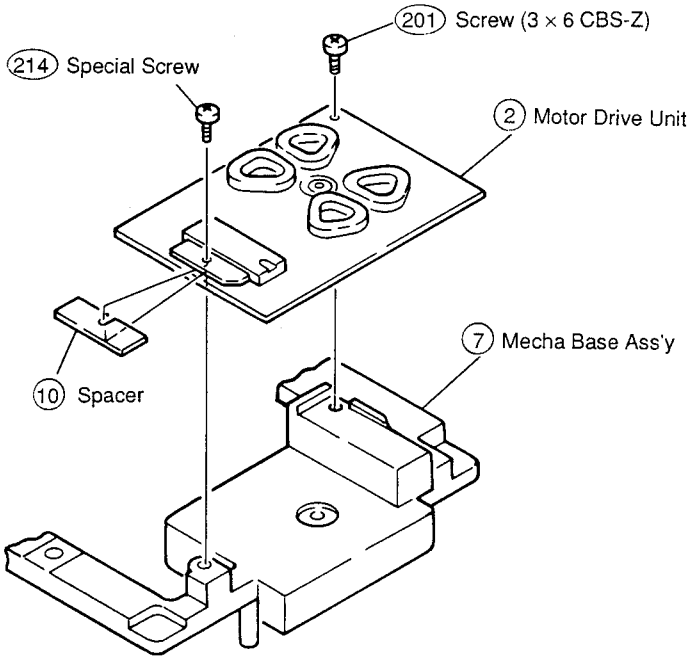




T/T Height Adjustment

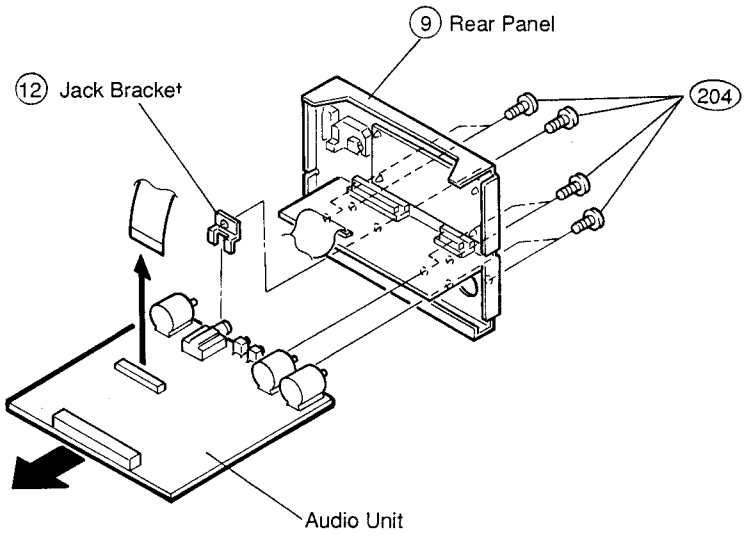
● **MOTOR DRIVE UNIT**

Remove a special screw, a screw, and detach the motor drive unit.



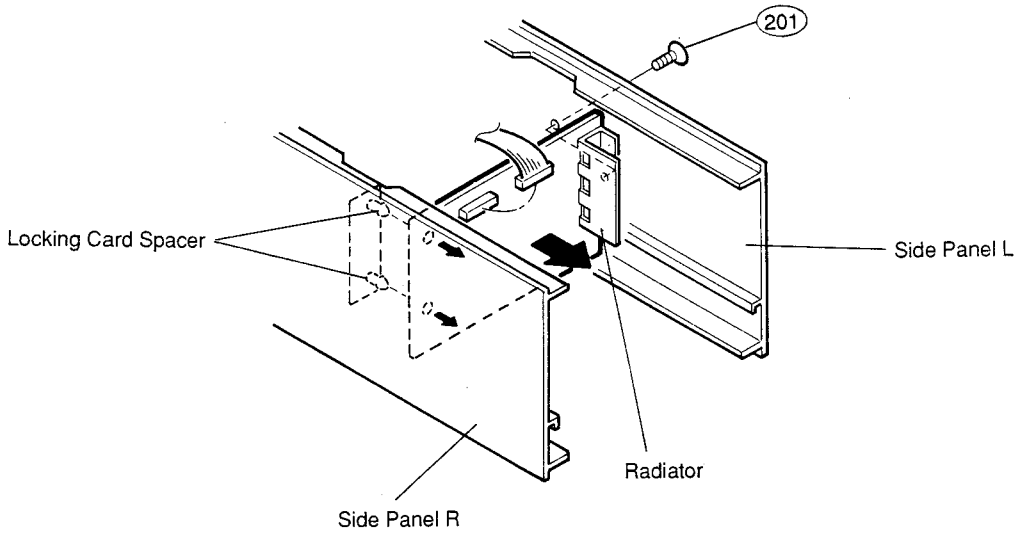
● **AUDIO UNIT**

Remove 7 screws (204) from real panel and a Jack bracket, and disconnect each connector wire.



● **DC POWER UNIT**

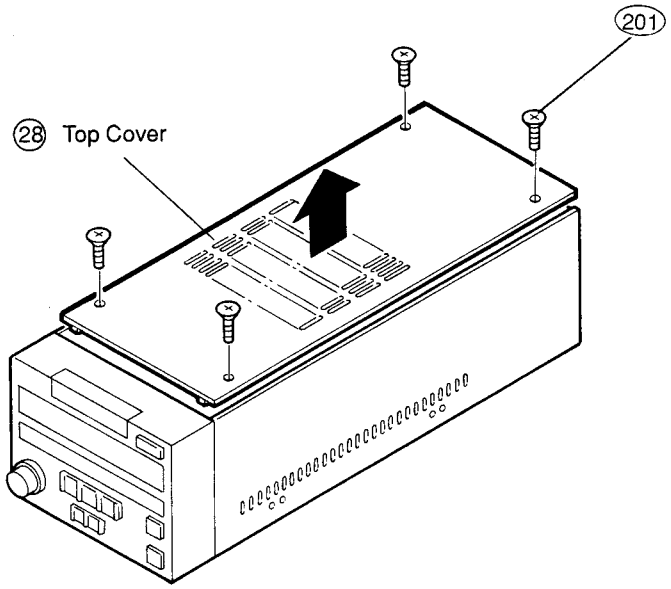
1. Remove one screw (201) on the Side Panel L.
2. Disconnect connector wire.
3. Detach DC Power Unit from 2 places on the locking card spacer.



DISASSEMBLY [DN-961FA]

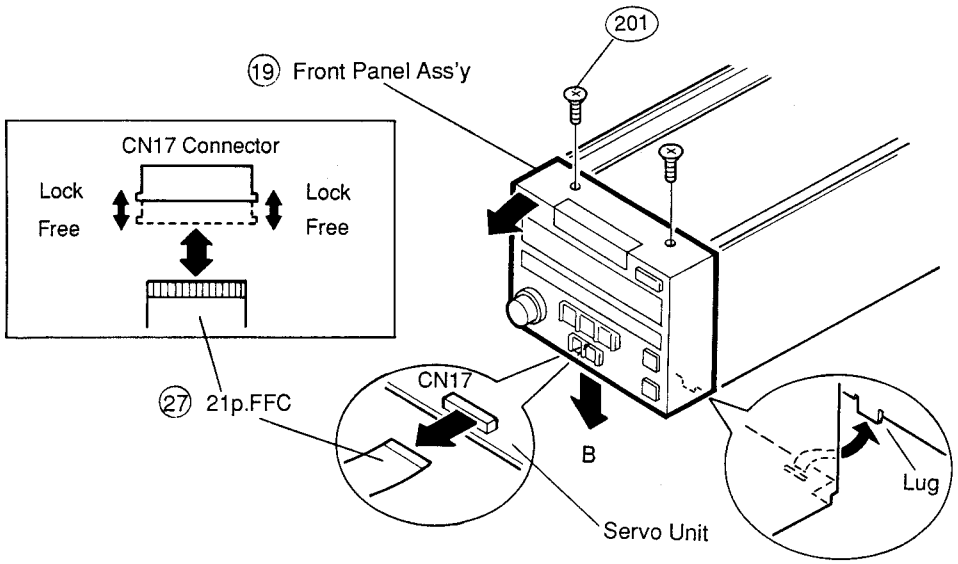
● **TOP COVER**

Remove 4 screws (201) and pull the top cover to arrow direction.



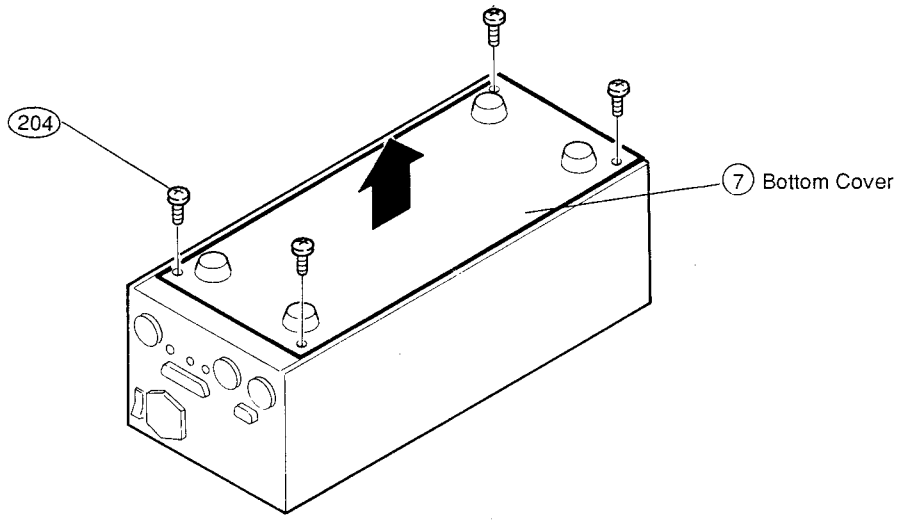
● **FRONT PANEL**

1. Remove 2 screws (201) and detach the front panel in A, B order, and disconnect the CN-17 (27) from the SERVO unit.
2. When attach the front panel, set the mecha. chassis lug to frontpanel assembly groove, as per complementary figure.



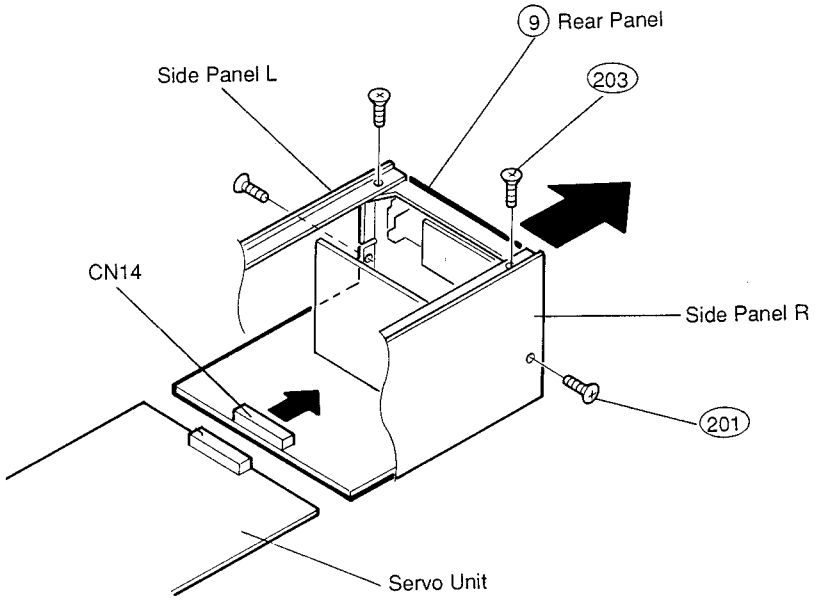
● **BOTTOM COVER**

Remove 4 bottom cover screws (204) and pull the bottom cover to arrow direction.



● **REAR PANEL**

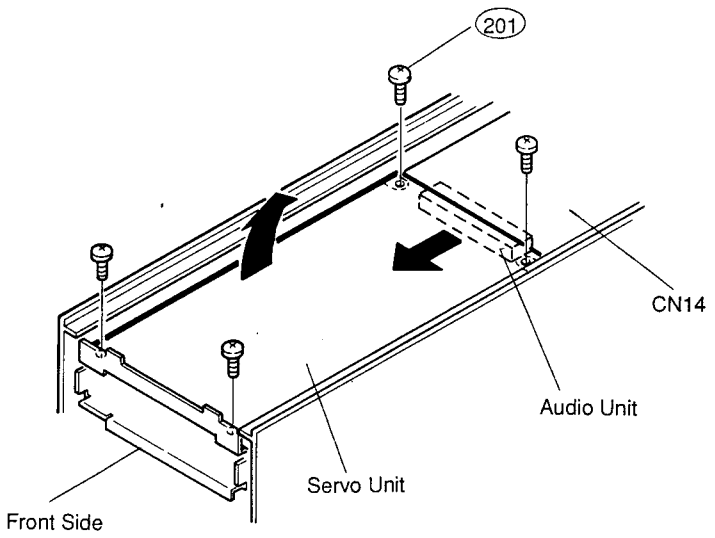
1. Remove 2 screws (201) on both sides, 2 screws (203) on the top.



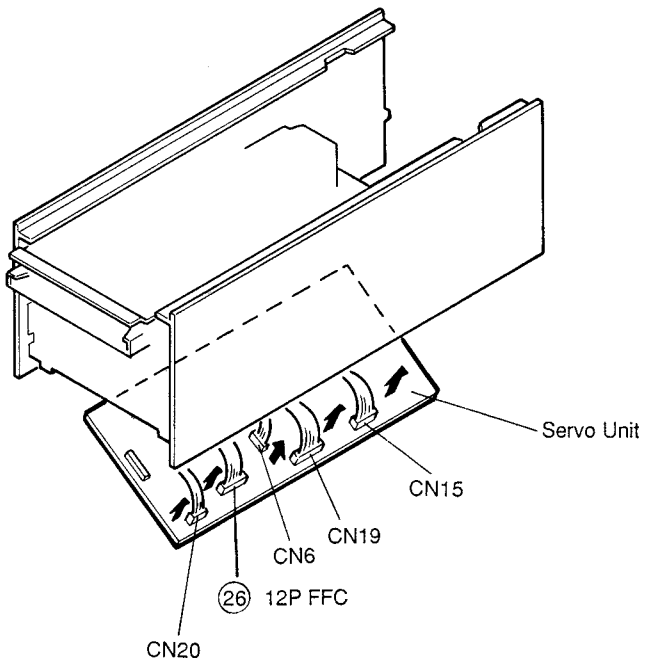
2. Detach portion CN14 of the servo unit and pull it out backwards.
3. Disconnect CN10 (lead wire from the power transformer) of the filter unit.
4. Remove screws of GND WIRE fixed to the chassis.

● **SERVO UNIT**

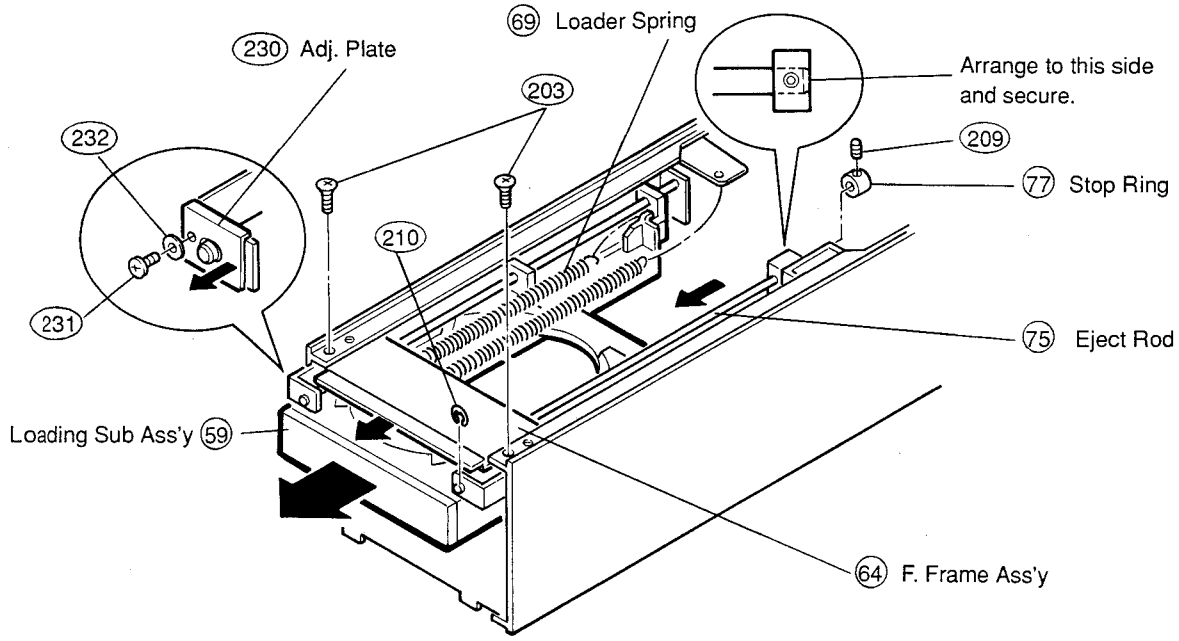
1. After removing front panel and bottom cover, remove 4 screws (201) fixing the servo unit.



2. Pull out connector portion (CN14) connected to the audio unit frontwards. Detach the servo unit from mecha, chassis.
3. After detaching of the servo unit, disconnect each connector and wire.



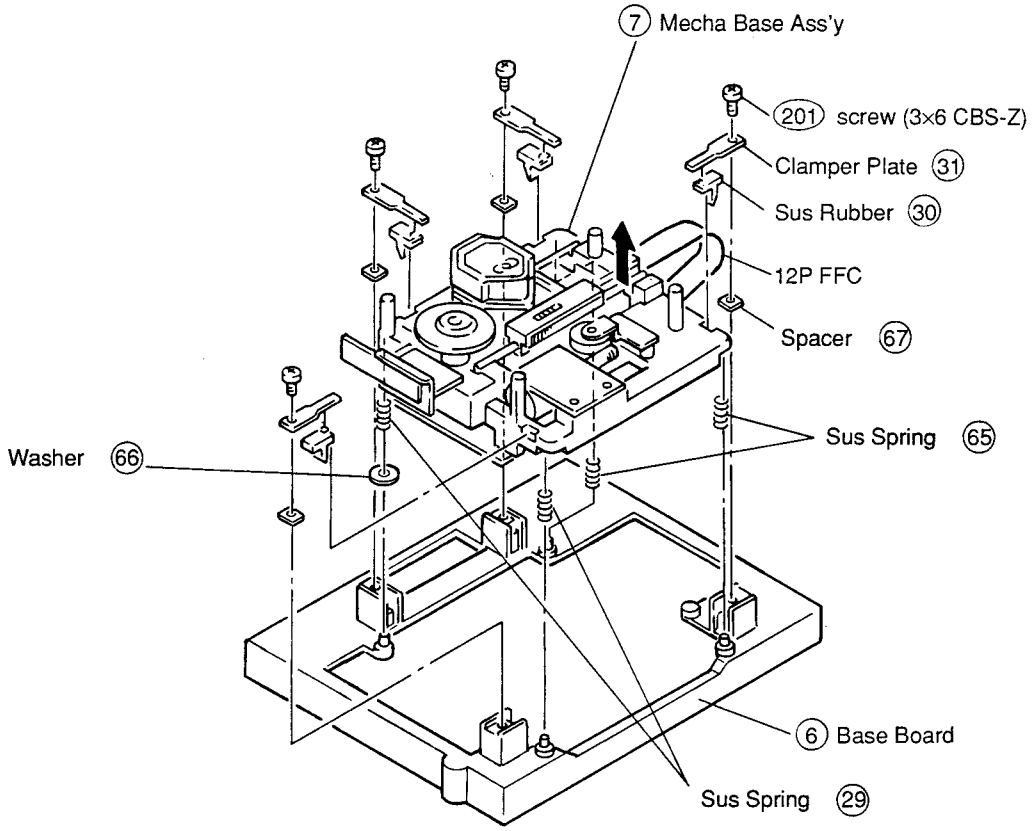
● LOADING SUB



1. After detaching of Front Panel, remove bond on one side of Loader Spring (69) (Side of Loading Sub Ass'y) and undo hook.
2. Remove 2 screws (203) fixing F. Frame Ass'y (64) , E. Ring (210) , one screw (231) , Washer (232) , Adj. Plate (230) , Stop Ring (77) and one screw (209) fixing it.
3. Pull out the F. Frame Ass'y (64) and Eject rod (75) frontwards.
4. Pull Loader Sub Ass'y (59) toward front and detach them. (Note: When pulling, pull slowly.)

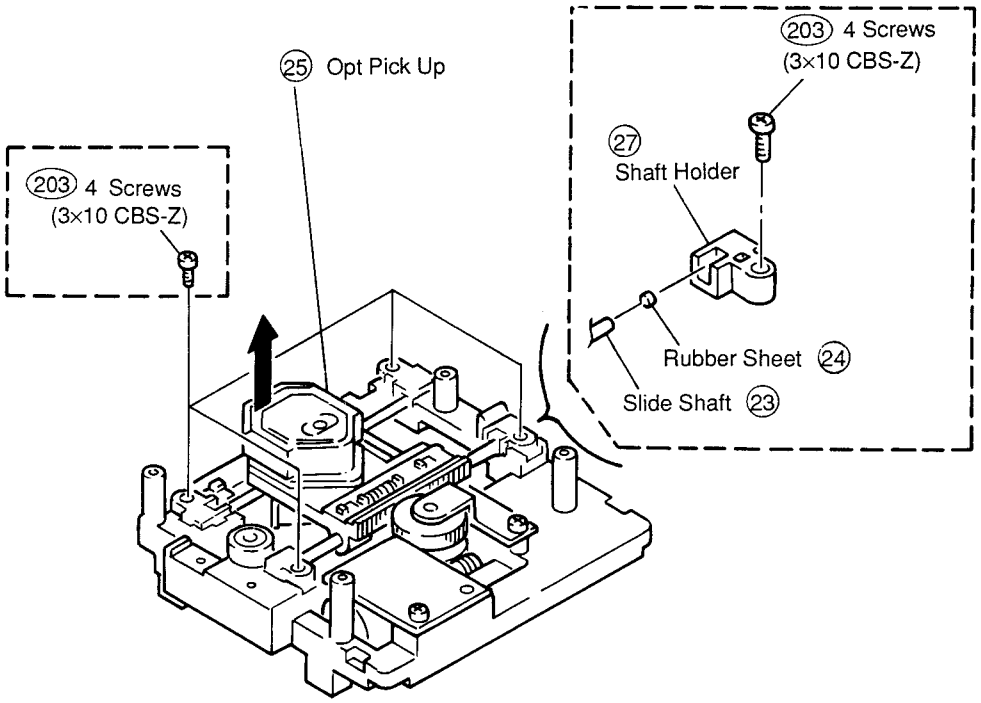
● **MECHANISM-BASE**

Remove 4 screws, disconnect a connector, and pull the mecha base assembly to arrow direction.



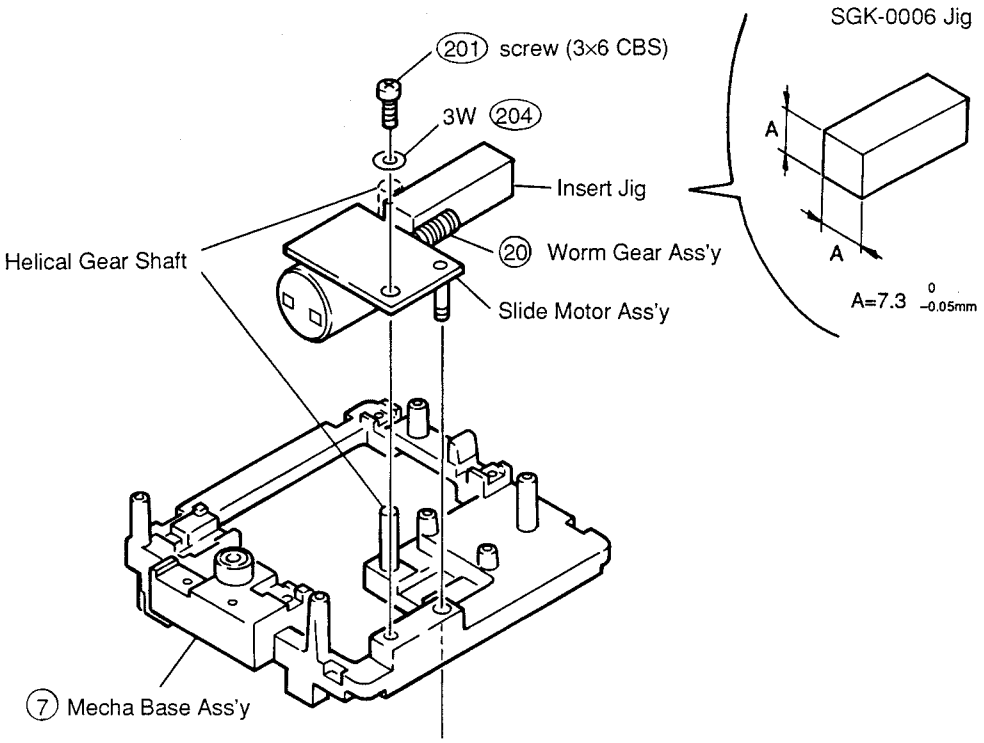
● **OPT. PICKUP**

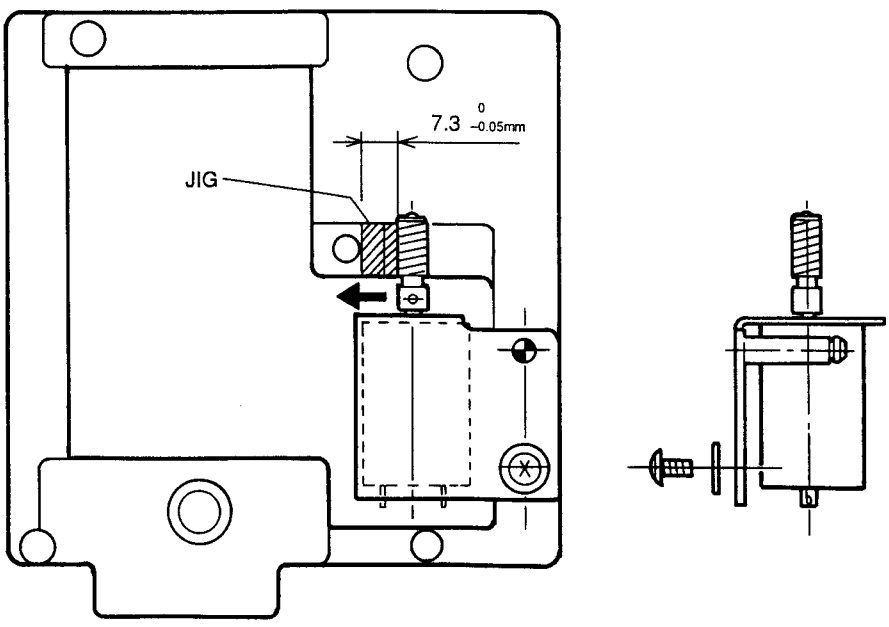
Remove 4 screws (203) and detach the optical pick-up together with slide shafts to arrow direction.



● **SLIDE MOTOR**

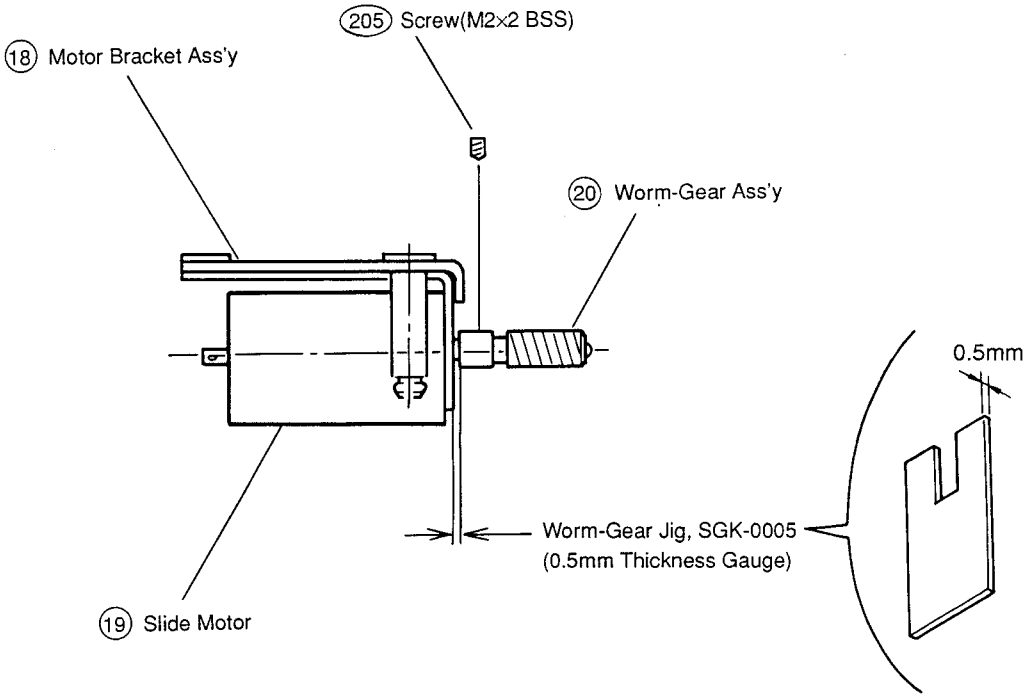
1. Use slide motor jig to install slide motor sub assembly to mecha.base assembly.
2. Assembling procedure
   1) Insert the shaft standing on slide motor sub assembly to the hole on mecha. base assembly.
   2) Screw the slide motor sub assembly to mecha. base assembly loosely.
   3) Place jig between worm-gear and helical-gear shaft, and adjust slide motor sub assembly so that worm-gear, jig and helical-gear shaft touch each other.
   4) Fix the screw firmly and remove the jig.





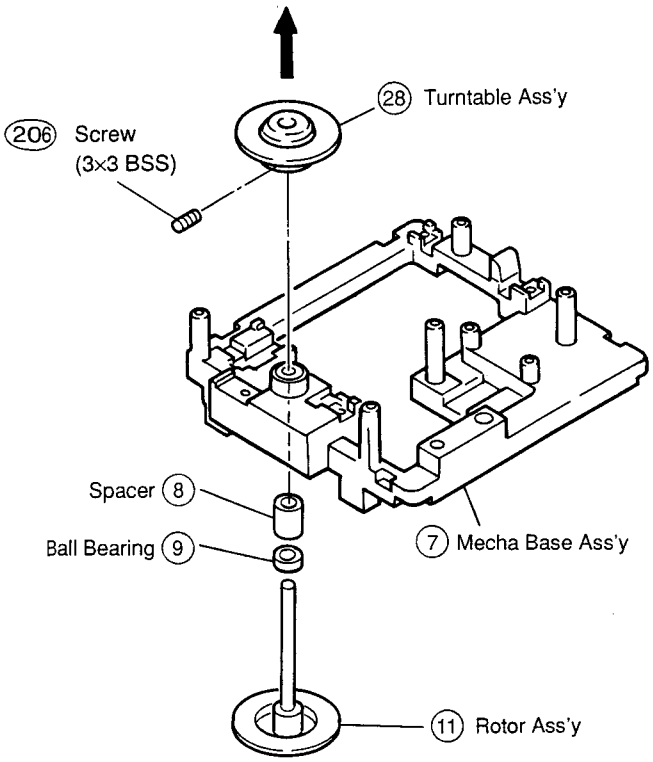
● **TO ATTACH WORM-GEAR TO SLIDE MOTOR SHAFT**

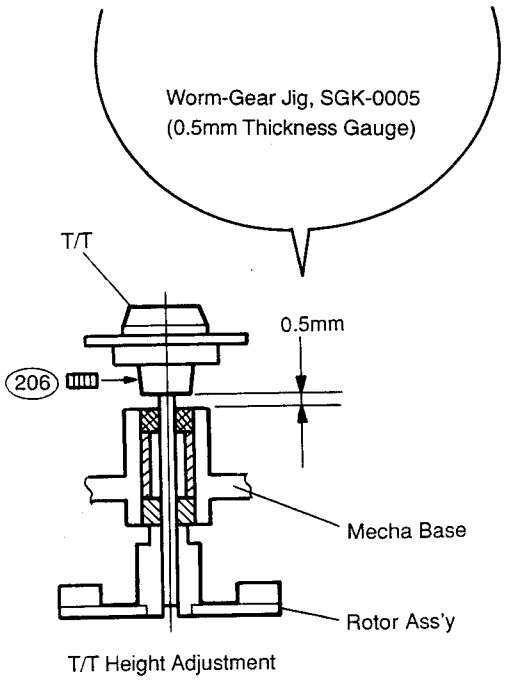
To attach Worm-Gear Ass'y to Slide-Motor shaft, insert the Jig between Worm Gear Ass'y and Motor Bracket Ass'y and fix worm-gear fixing screw so that 0.5mm gap is maintained.



● **TURNTABLE**

Loosen 1 BSS (3×3) screw of turntable assembly,and pull the turntable assembly to arrow direction.

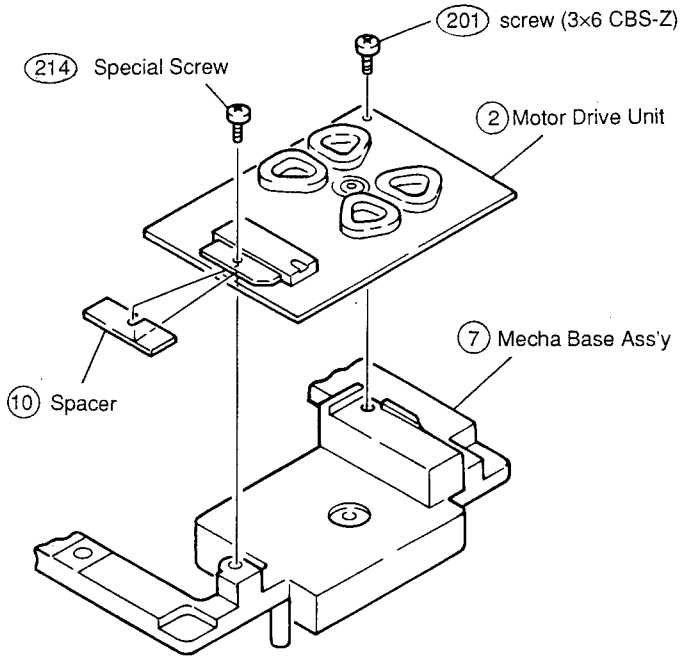




T/T Height Adjustment

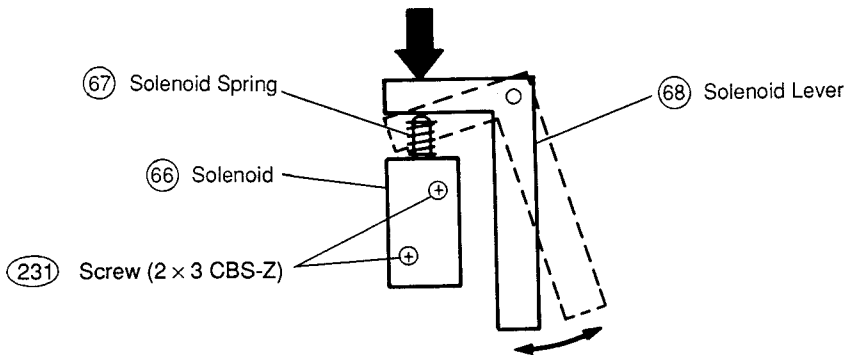
● **Motor Drive Unit**

Remove a special screw, a screw, and detach the motor drive unit.



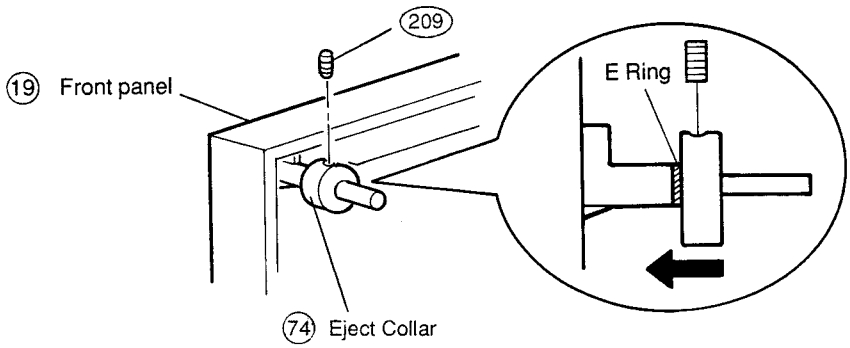
● **CONFIRMATION AND ADJUSTMENT OF SOLENOID LEVER ACTION.**

Adjust screw position to mount Solenoid, and confirm that the Solenoid returns to the original position by power of spring.



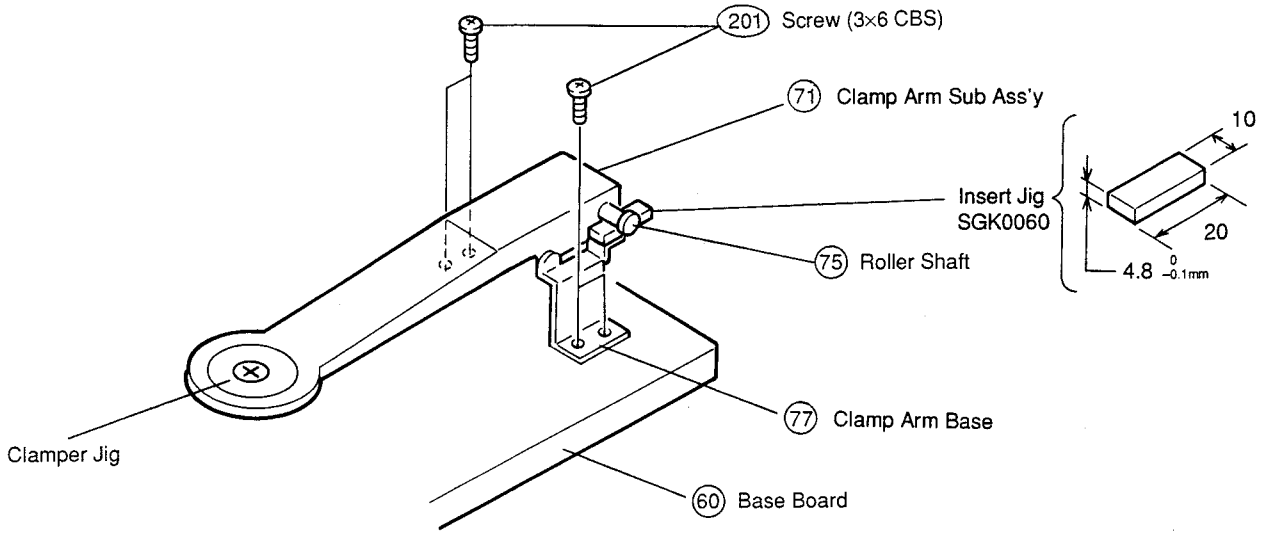
● **EJECT COLLAR**

Set in Eject collar on one side of Front Panel and secure with fixing screw.



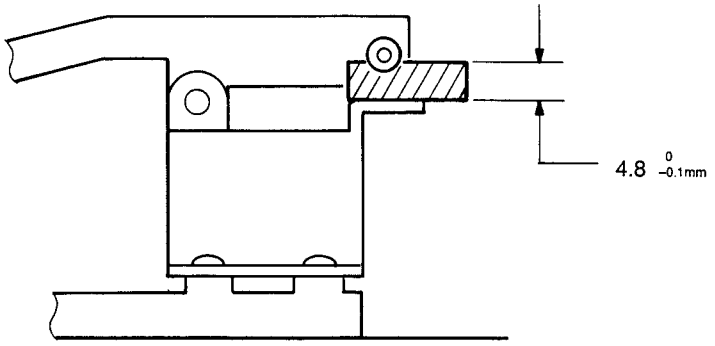
● **CLAMP ARM**

1. When mounting Clamp Arm Sub Ass'y and Clamp Arm Base on Base Board, use Inserting Jig, clamper Jig for position adjustments of Clamper and Turntable.



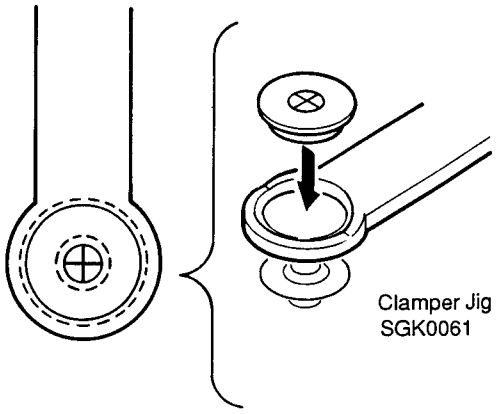
2. Assembly Procedure

1) After mounting Clamp Arm Sub Ass'y on Clamp Arm Base, tentatively fix to Base Board.
2) Attach Insert Jig between clamp Arm Base and Roller Shaft, and attach clamper Jig in hole portion at the end of Clamp Arm Sub Ass'y, irrespectively.



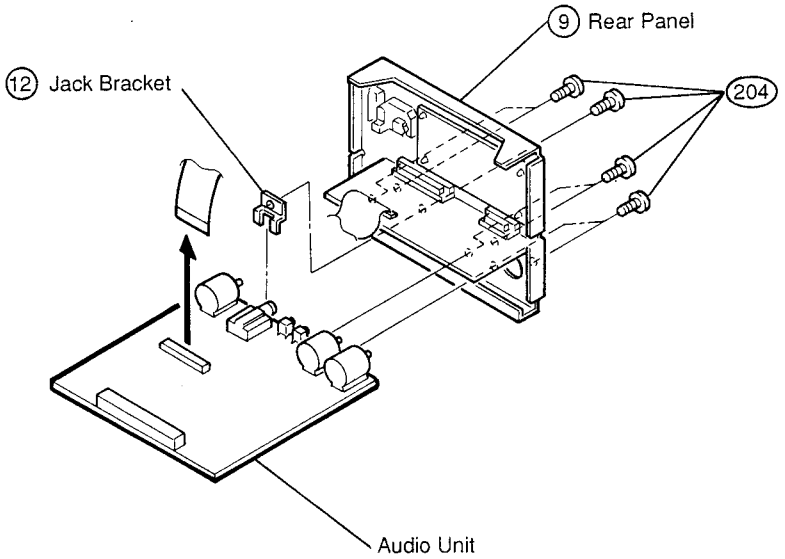
3) Meet centers of Clamper Jig and Turntable by eye observation,secure Clamp Arm Base with fixing screw, and then remove 2 Jigs.

(Confirmation)
Confirm that Clamper and Clamper Arm do not touch when loaded disc is rotated pulling Clamper to one side.



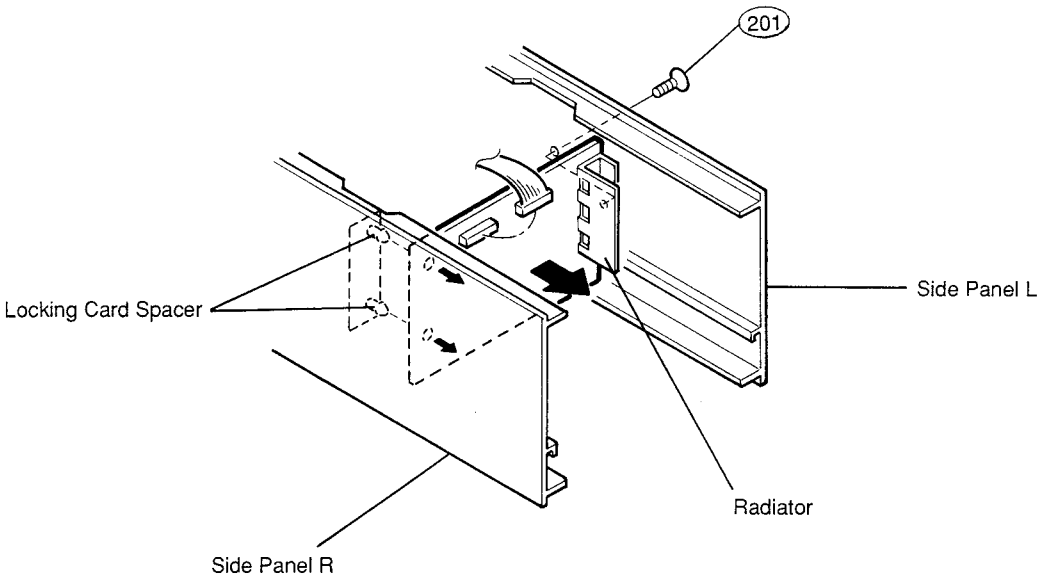
● **AUDIO UNIT**

Remove 7 screws (204) , Jack bracket and disconnect each connector wire.



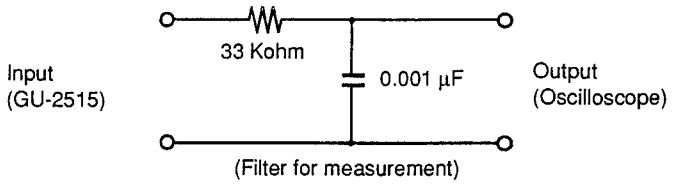
● **DC POWER UNIT**

1. Remove one screw (201) on the Side Panel L.
2. Disconnect connector wire.
3. Detach DC Power Unit from 2 places on the locking card spacer.

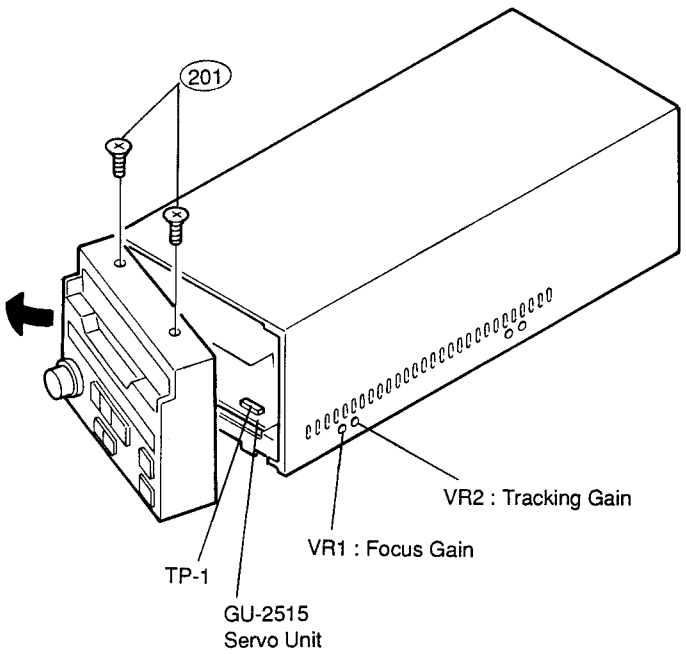


ELECTRICAL ADJUSTMENT

- **NECESSARY EQUIPMENTS FOR ADJUSTMENT**
  1. Dual trace oscilloscope
  2. Reference disc (DENON CA-1094)
  3. Oscillator (10Hz ~ 10kHz, 0 ~ 3 Vp-p)
  4. Frequency Counter
  5. Filter for measurement
  6. Adjustment Wire Connector



- **LOCATION**
  1. Remove 2 screws (201) and remove Front Panel.



● SERVICE MODE FUNCTON

The player must remain in the SERVICE mode throughout the alignment procedure.
While in the SERVICE mode, Focus, Tracking, Servo functions can be accessed by selecting the appropriate Track Number. The Track Number is selected via the "SELECT" Knob on the front panel.

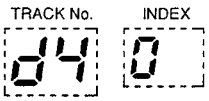
1. Setting of the Service Mode

	Operation	Display	Remarks
(1)	Turn power switch ON.	Track No. "– –" lights.	
(2)	Test mode ON.		
	1. Press the STDBY/CUE button once while holding in the INDEX and TIME buttons.	TRACK No. d1	
	2. Press the STDBY/CUE button once while holding in the INDEX and TIME buttons.	TRACK No. d2	
	3. Press the STDBY/CUE button once while holding in the INDEX and TIME buttons.	TRACK No. d3	
	4. Press the STDBY/CUE button once while holding in the INDEX and TIME buttons.	TRACK No. d4 INDEX 0	
	5. Press the SELECT knob.	TRACK No. d4 INDEX 1	
	6. Press the STDBY/CUE button once while holding in the INDEX and TIME buttons.	TRACK No. d5	
	7. Press the STDBY/CUE button once while holding in the INDEX and TIME buttons.	TRACK No. d6	
	8. Press the STDBY/CUE button once while holding in the INDEX and TIME buttons.	TRACK No. d7	
	9. Press the STDBY/CUE button once while holding in the INDEX and TIME buttons.	TRACK No. – – INDEX XX MIN XX * XX XX Displays CPU Version.	
(3)	Load Cartridge (With adjusting Disc)		
(4)	Turn Select Knob	TRACK No. "XX" blinks.	Selecting desired Function as TRACK No.
(5)	Press PLAY button	TRACK No. "XX" stays lit.	Execute test
(6)	Press STDBY/CUE	TRACK No. "00" lights.	Tracking gain Check.

Release of Test Mode

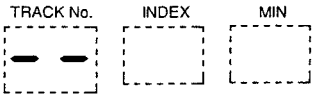
1. Eject Disc (Cartridge).
2. Perform the above step 1 ~ 5.

DISPLAY:



3. Perform the above steps 6 ~ 9.

DISPLAY:



* INDEX. MIN column no display.

Returns to normal operation mode.

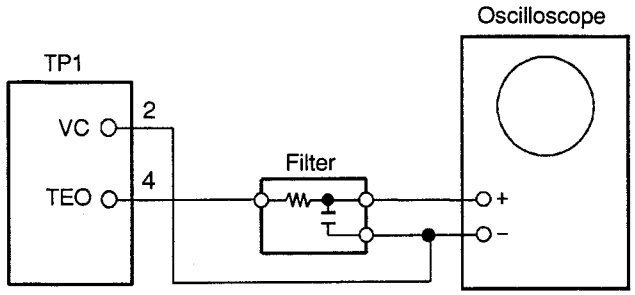
2. Function

Track No.	Function	Purpose of Test
01	Laser ON	
02	Focus Search	Monitoring "S" curve
03	P.U. moves inner side of disc.	
04	P.U. moves center of program area on disc.	
05	P.U. moves outer side of disc.	
06	All servo functionate	Focus Servo and Tracking Servo gain adjustments.
07	Focus Servo "ON"	Tracking Offset check
08	Prohibited to use	
09	100 lines reverse jump	
10	100 lines forward jump	
11	10 lines reverse jump	
12	10 lines forward jump	
13	One line reverse jump	
14	One line forward jump	
15	Ineer/Outer sides search	
16	Heat Run Mode	Single Track repetition mode.
17	Heat Run Mode	All Tracks repetition mode.

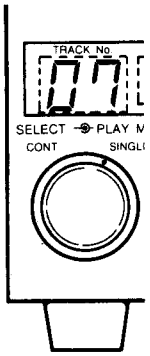
ADJUSTMENT

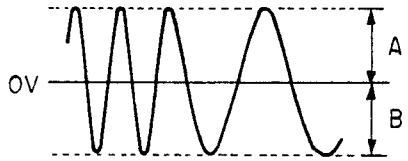
1. Confirmation of Tracking Offset

① Connections



② Turn Select Knob (07 is indicated), then push the PLAY button.

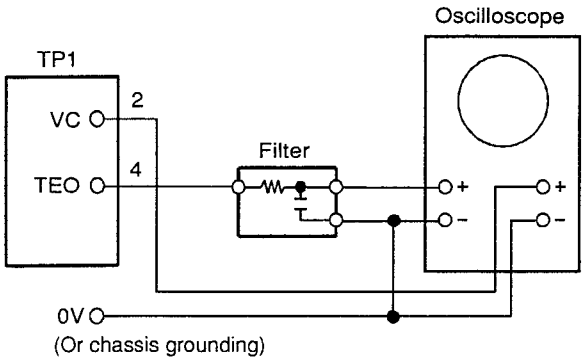


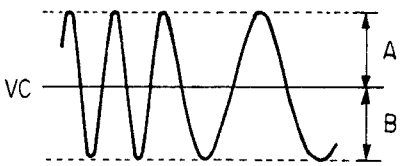


Measure the voltage of A,B and in case $\frac{|A-B|}{A+B}$ exceeds 15%, please replace pick-up as it is defected.

③ Observe TEO on the scope.

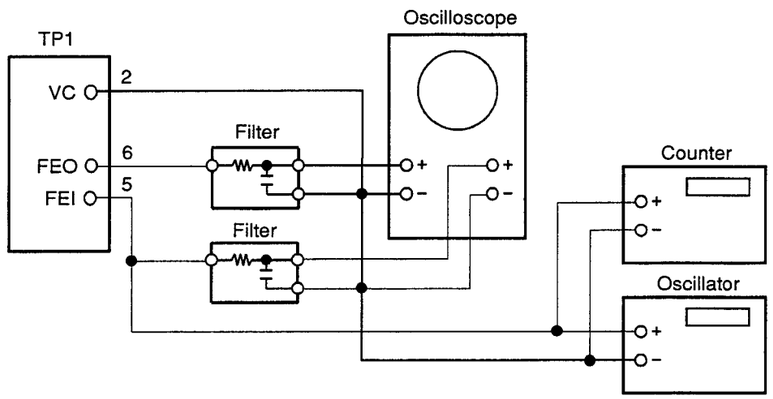
Note: In case "–" terminal of the measureing equipment is grounded, follow the connection shown under.





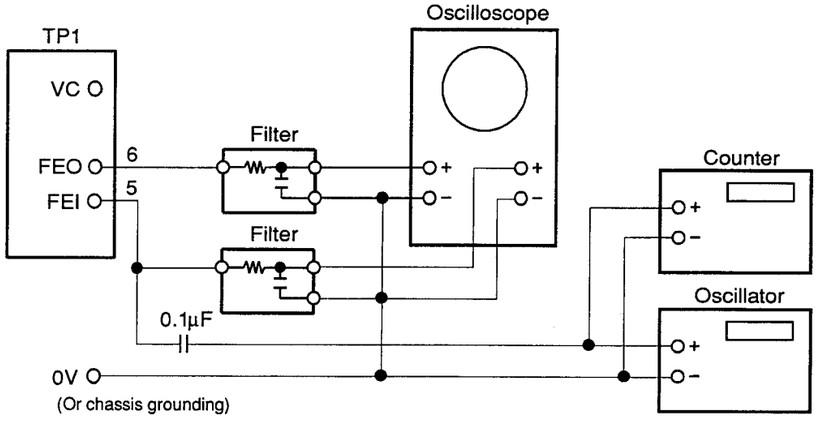
2. Adjusment of Focus Gain

① Connections



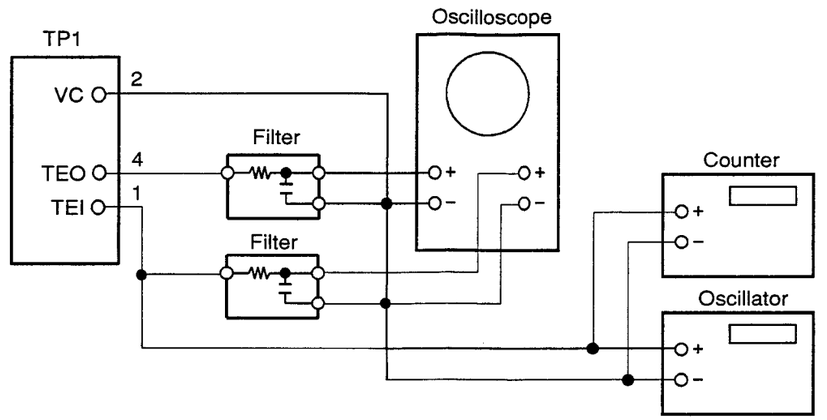
② Turn Select Knob (05 is indicated), then push the PLAY button.
③ Set the oscillator 1.1kHz, 0.6 Vp-p mode.
④ Make the oscilloscope in X-Y mode.
⑤ Adjust the VR2 (FOCUS) so as to symmetrize Lissajous figure to X axis or Y axis.

Note: In case "–" terminal of the measureing equipment is grounded, follow the connection shown under.



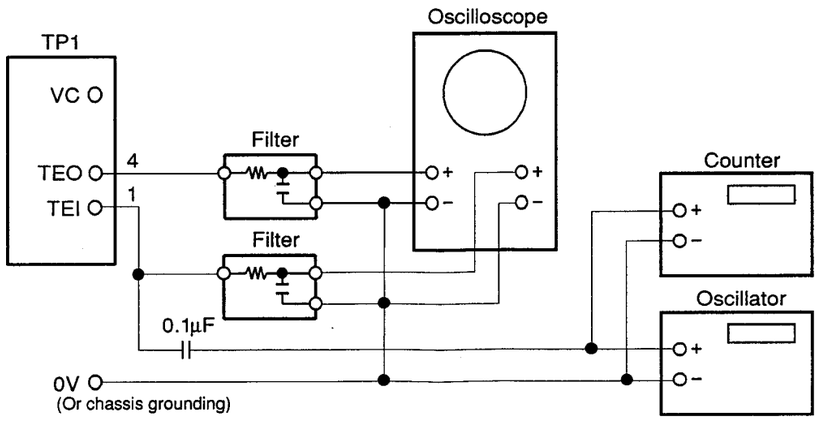
3. Adjustment of Tracking Gain

① Connections



② Confirm that 05 is indicated.
③ Set the osillator 1.4kHz, 0.6Vp-p mode.
④ Make the oscilloscope in X-Y mode.
⑤ Adjust the VR1 (TRACK) so as to symmetrize Lissajous figure to X axis or Y axis.

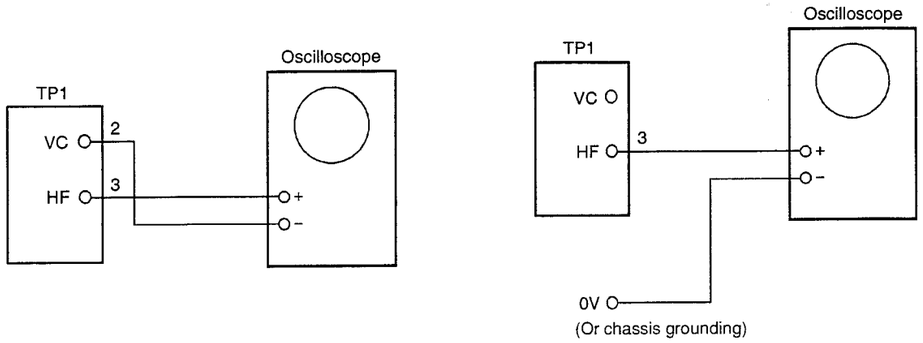
Note: In case "–" terminal of the measuring equipment is grounded, follow the connection shown under.



4. Confirmation of HF Waveform

① Connections

Note: In case "–" terminal of the measuring equipment is grounded, follow the connection shown under.



② Observe HF waveform on the scope.

③ The standard amplitude of HF waveform is 1.1V. If it is less than 0.8V, please replace pick-up as it is defected.

5. Adjustment of Super Linear Converter

Adjustment of Super Linear Converter is only performed at a time the DA Converter is replaced.

Note: For the above adjustment, DENON Audio Technical CD (38C39-7174) must be used.

Adjustment Procedure

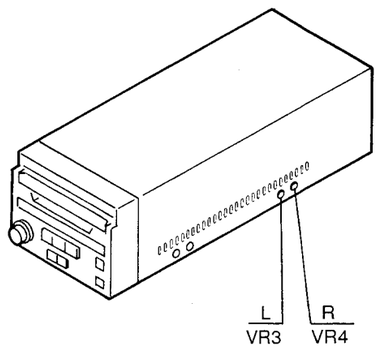
① Connections
Connect the LINE OUT to a distortion meter through the low-pass filter.

② Playback a disc obtains 1kHz, 0dB sine wave tone.

③ Adjust the VR3, VR4 and obtain minimum THD.

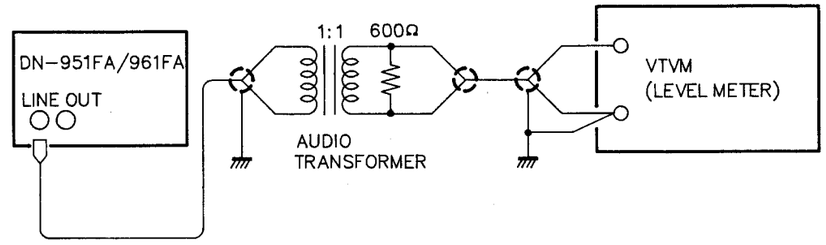
VR3 . . . . . L-channel
VR4 . . . . . R-channel

THD standard is less than 0.008%



6. Output Level Adjustment

1. Connect VTVM to the output connector of DN-951FA/961FA
Use 1:1, 600-ohm Audio Transformer between the unit and VTVMs in order for matching the unbalanced input of VTVM and the active balanced output of DN-951FA/961FA.

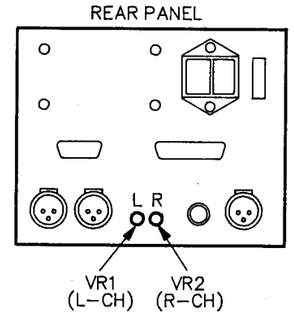


Connection for Output Level Adjustment

2. Turn the power switch on.
3. Set Track Number "49", and press PLAY/PAUSE (▶II) button.
4. While reading VTVM indication, adjust VR1 (L-ch) and VR2 (R-ch) so that the output level attains +18 dbm (or desired level).

Note: For the above adjustment, DENON Audio Technical CD (38C 39-7174) must be used.

Playback of Track Number "49" completes in a short duration. If the pick-up is moved to the next track, press STANDBY/CUE (■◀) button, then PLAY/PAUSE (▶II) button to repeat the adjustment on the Track Number "49".



Location of Output Level Adjustment VRs

NOTE FOR PARTS LIST

- Part indicated with the mark " ◉ " are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/4W Type in the P.W.Board parts list. (Refer to the Schematic Diagram for those parts.)

WARNING:

Parts marked with this symbol ⚠ ▒▒ have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

● Resistors

* **Resistance**

1 8 2 ⇒ 1800 ohm = 1.8 kohm
- 2: Indicates number of zeros after effective number.
- 18: 2-digit effective number.
- • Units: ohm

1 R 2 ⇒ 1.2 ohm
- 2: 1-digit effective number.
- 1R: 2-digit effective number, decimal point indicated by R.
- • Units: ohm

* **Capacity (electrolyte only)**

2 2 2 ⇒ 2200μF
- 2: Indicates number of zeros after effective number.
- 22: 2-digit effective number.
- • Units: μF.

2 R 2 ⇒ 2.2μF
- 2: 1-digit effective number.
- 2R: 2-digit effective number, decimal point indicated by R.
- • Units: μF.

● Capacitors

Ex.: CE (Type) 04W (Shape and performance) 1H (Dielectric strength) 2R2 (Capacity) M (Allowable error) BP (Others)

CE : Aluminum foil electrolytic CA : Aluminum solid electrolytic CS : Tantalum electrolytic CQ : Film CK : Ceramic CC : Ceramic CP : Oil CM : Mica CF : Metallized CH : Metallized	0J : 6.3V 1A : 10V 1C : 16V 1E : 25V 1V : 35V 1H : 50V 2A : 100V 2B : 125V 2C : 160V 2D : 200V 2E : 250V 2H : 500V 2J : 630V	F : ±1% G : ±2% J : ±5% K : ±10% M : ±20% Z : +80% −20% P : +100% −0% C : ±0.25pF D : ±0.5pF = : Others	HS : High stability type BP : Non-polar type HR : Ripple-resistant type DL : For charge and discharge HF : For assuring high frequency U : UL part C : CSA part W : UL-CSA type F : Lead wire forming

* **Capacity (except electrolyte)**

2 2 2 ⇒ 2200μμF = 0.0022μF
- 2: (More than 2) — Indicates number of zeros after effective number.
- 22: 2-digit effective number.
- • Units: μF.

2 2 1 ⇒ 220PF
- 1: (0 or 1) — Indicates number of zeros after effective number.
- 22: 2-digit effective number.
- • Units: PF.

• When the dielectric strength is indicated in AC, "AC" is included after the dieelectric strength value.

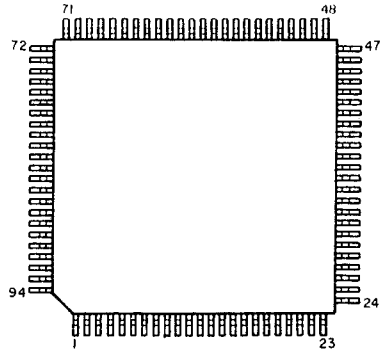
● IC's (Microcomputer)



μPD78233GJ-5BG Terminal Function

Terminal No.	Symbol Name	I/O	Terminal Function
1	$\overline{OE}$	O	Control signal of display output.
2	$\overline{RST2}$	O	Reset signal of IC8 (μPD6381GF).
3	CLD	O	Interface load input
4	LOCK	I	Eject Lock
5	—	I	Not used.
6	SO	I	IC8 serial data input.
7	RST–	I	Hard reset input. Reset at "L".
8	V_{DD}	—	+5V power supply.
9	X2	I	Clock oscillation circuit input 2.
10	X1	I	Clock oscillation circuit input 1.
11	V_{SS}	—	0V power supply.
12	V_{SS}	—	0V power supply.
13	—	—	Not connected.
14	CLOK	O	Clock for servo command, level command. Connected to IC2, IC21.
15	DATA	O	Data for servo command, level command. Connected to IC2, IC21.
16	XLAT	O	Latch pulse of servo command. Latched at falling edge.
17	MUTE	O	Mute output.
18	LDON	O	Laser ON/OFF signal of optical pickup. Laser emits light at "H".
19	SC0	O	Scan signal 0
20	SC1	O	Scan signal 1
21	—	—	Not connected.
22	SC2	O	Scan signal 2
23	$\overline{REFRQ}$	I	Refresh Request
24	$\overline{WAIT}$	O	Wait
25	$\overline{WR}$	O	Write strobe
26	$\overline{RD}$	O	Read strobe
27	CS–	O	Chip select signal of IC8. Normally "H". "L" at select only.
28	C/$\overline{D}$	O	Command/data designate signal of IC8. Command at "L", indicates data transmitting mode at "H".
29	SCK–	O	Clock for command transmission to IC8.
30	SI	O	Command data to IC8.
31	—	—	Not connected.
32	A15	O	Memory address 15.
33	A14	O	Memory address 14.
34	A13	O	Memory address 13.
35	—	—	Not connected.
36	A12	O	Memory address 12.
37	A11	O	Memory address 11.
38	A10	O	Memory address 10.
39	A9	O	Memory address 9.
40	A8	O	Memory address 8.
41	—	—	Not connected.
42	AD7	I/O	Data bus 7.
43	AD6	I/O	Data bus 6.

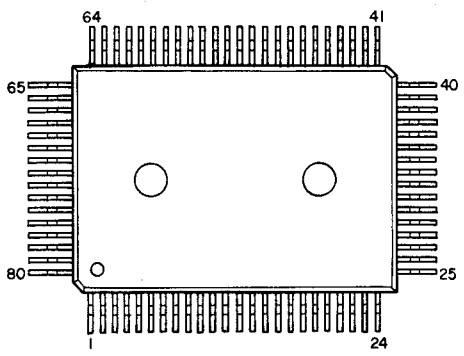
Terminal No.	Symbol Name	I/O	Terminal Function
44	AD5	I/O	Data bus 5.
45	AD4	I/O	Data bus 4.
46	AD3	I/O	Data bus 3.
47	AD2	I/O	Data bus 2.
48	AD1	I/O	Data bus 1.
49	AD0	I/O	Data bus 0.
50	ASTB	O	Pulse for address latch.
51	V_{SS}	—	0V power supply.
52	V_{SS}	—	0V power supply.
53	—	—	Not connected.
54	MODE	I	Memory read select terminal.
55	—	—	Not connected.
56	AMUTE	O	Audio output mute signal. Mute at "H".
57	SQCK	O	Clock for sub—code reading.
58	SENS	I	Indication signal of servo actuating condition. Emits from IC2.
59	MIRR ON	I	Mirror on.
60	—	—	Not connected.
61	MD2	I	Digital-out ON/OFF control.
62	SQSO	I	Sub-code data input. Emits from IC2.
63	DFLAT	O	Command latch pulse for digital filter. Output to IC300.
64	DMD	O	Digital mode select.
65	V_{DD}	—	+5v power supply.
66	V_{DD}	—	+5v power supply.
67	—	I	Not used.
68	—	I	Not used.
69	—	I	Not used. Fixed to "L".
70	—	—	Not connected.
71	—	I	Not used. Fixed to "L".
72	—	I	Not used. Fixed to "L".
73	—	I	Not used. Fixed to "L".
74	$\overline{BCOD}$	I	Bar code data.
75	$\overline{BCK}$	I	Bit clock.
76	AV_{DD}	—	+5V power supply for A/D converter.
77	AVREF1	—	+5V. A/D converter reference voltage.
78	—	—	Not connected.
79	AV_{SS}	—	0V power supply for A/D converter.
80	—	O	Not used.
81	—	O	Not used.
82	AVREF2	—	+5V. D/A converter reference voltage.
83	AVREF3	—	0V. D/A converter reference voltage.
84	—	—	Not connected.
85	—	I	Not used. Fixed to OV.
86	SHUT	I	Shutter switch.
87	—	I	Not used.
88	WFCK	I	Connected to WFCK output of IC2. 7.35kHz clock.
89	SCOR	I	Sub-code sink input. Connect to IC2. Input 75 pulses per 1 second.
90	DRDY	I	Data receiving READY signal of IC8. Fixed to "H".
91	—	I	Not used. Fixed to "L".
92	OVF–	I	Over flag of IC8. Normally "H".
93	RXD–	I	Serial interface reception data.
94	TXD–	O	Serial interface transmission data.

μPD6381GF (IC8) Terminal Function

Terminal No.	Symbol Name	I/O	Terminal Function
1	DRDY	O	Command reception READY signal from microcomputer. Normally "H".
2	FSMASK	I	PC-RST mask signal. Fixed to "L".
3	SEL	I	Clock input select. Fixed to "H".
4	—	I	Not used.
5	XO	O	X'tal oscillation output.
6	XI	I	X'tal oscillation input.
7	GND	—	0V power supply.
8	XFSO	O	Clock Output. Not used.
9	—	—	Not connected.
10	LRCKO	O	LR clock output. 44.1kHz.
11	WCLKO	O	Word clock output. 88.2kHz. Not used.
12	BCLKO	O	Bit clock output. 2.1MHz.
13	BRAK–	O	Break acknowledge output. Fixed to "H".
14	GND	—	0V power supply.
15	BRRQ–	I	Break request input. Fixed to "H".
16	FSRST–	I	Program counter reset input. Fixed to "H".
17	RST2–	I	Soft reset input. Normally "H".
18	RST–	I	Hard reset input. Normally "H".
19	A0	O	External RAM address 0.
20	A1	O	External RAM address 1.
21	A2	O	External RAM address 2.
22	A3	O	External RAM address 3.
23	A4	O	External RAM address 4.
24	A5	O	External RAM address 5.
25	A6	O	External RAM address 6.
26	A7	O	External RAM address 7.
27	A8	O	External RAM address 8.
28	A9	O	External RAM address 9. Not used.
29	A10	O	External RAM address 10. Not used.
30	A11	O	External RAM address 11. Not used.
31	A12	O	External RAM address 12. Not used.
32	A13	O	External RAM address 13. Not used.
33	V_{DD}	—	+5V power supply.
34	A14	O	External RAM address 14. Not used.
35	A15	O	External RAM address 15. Not used.
36	A16	O	External RAM address 16. Not used.
37	RAS–	O	External RAM low address strobe signal.
38	CAS–	O	External RAM column address strobe signal.
39	WE–	O	External RAM write enable signal.
40	I/O1	I/O	External RAM data 1.
41	I/O2	I/O	External RAM data 2.
42	I/O3	I/O	External RAM data 3.
43	I/O4	I/O	External RAM data 4.
44	I/O5	I/O	External RAM data 5. Not used.
45	I/O6	I/O	External RAM data 6. Not used.
46	I/O7	I/O	External RAM data 7. Not used.
47	I/O8	I/O	External RAM data 8. Not used.
48	I/O9	I/O	External RAM data 9. Not used.
49	I/O10	I/O	External RAM data 10. Not used.
50	I/O11	I/O	External RAM data 11. Not used.
51	I/O12	I/O	External RAM data 12. Not used.

Terminal No.	Symbol Name	I/O	Terminal Function
52	I/O13	I/O	External RAM data 13. Not used.
53	I/O14	I/O	External RAM data 14. Not used.
54	I/O15	I/O	External RAM data 15. Not used.
55	I/O16	I/O	External RAM data 16. Not used.
56	GND	—	0V power supply.
57	MD0	I	Mode select 0. Fixed to "L".
58	MD1	I	Mode select 1. Fixed to "H".
59	MD2	I	Mode select 2. Fixed to "L".
60	BCLK1	I	Bit clock input. 2.18MHz.
61	LRCK1	I	LR clock input. 44.1kHz.
62	BCLK2	I	Bit clock input.
63	LRCK2	I	LR clock input.
64	DI1	I	Data input.
65	DO1	O	Data output.
66	DI2	I	Data input.
67	DO2	O	Not used.
68	DO3	O	Not used.
69	DORQ–	I	Data out request input.
70	GF–	O	G flag output. Not used.
71	OVF–	O	Overflow output. Normally "H".
72	V_{DD}	—	+5V power supply.
73	TEST0	I	Fixed to "H".
74	TEST1	I	Fixed to "H".
75	SETRDY	O	Not used.
76	SO	O	Serial data output.
77	SCK–	I	Serial data input/output clock.
78	SI	I	Serial data input.
79	C–/D	I	Command /data designation signal. "L" - command, "H" - data.
80	CS–	I	Chip select input.

μPD6381GF

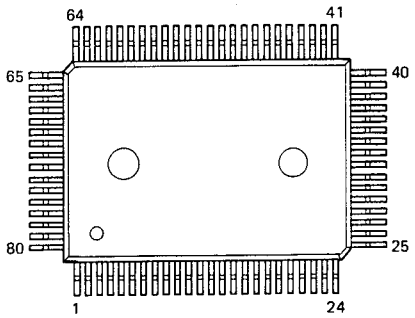


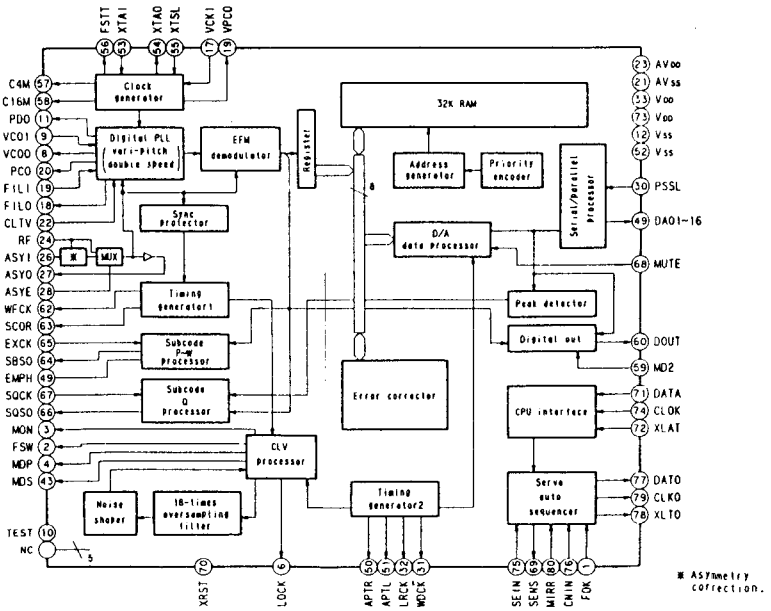
CXD2500AQ Terminal Function

Terminal No.	Symbol	I/O		Terminal Function
1	FOK	I		Input terminal for OK focussing. Use for Servo-autosequencer.
2	FSW	O	Z,0	Output to shift time constant of output filter for spindle motor.
3	MON	O	1,0	ON/OFF control output for spindle motor.
4	MDP	O	1,Z,0	Servo control for spindle motor.
5	MDS	O	1,Z,0	Servo control for spindle motor.
6	LOCK	O	1,0	Sampling GFS by 460 Hz and if it is "H", delivers "H" ; if it is continuously "L" 8 times, delivers "L".
7	NC		—	
8	VCOO	O	1,0	Oscillation current output for analog EFM PLL.
9	VCOI	I		Oscillation current output for analog EFM PLL. f LOCK=8.6436MHz.
10	TEST	I		TEST output. Normally GND.
11	PDO	O	1,Z,0	Charge pump output for analog EFM PLL.
12	Vss			GND.
13	NC		—	
14	NC		—	
15	NC		—	
16	VPCO	O	1,Z,0	Charge pump output for variable pitch PLL.
17	VCKI	O		Clock input from external VCO for variable pitch. fc center=16.9344MHz.
18	FILO	O	Analog	Filter output for master PLL. (slave=digital PLL)
19	FILI	I		Filter input for master PLL.
20	PCO	O	1,Z,0	Charge pump output for master PLL.
21	AVss			Analog GND.
22	CLTV	I		Control voltage input for master VCO.
23	AV_{DD}			Analog power supply (+5V).
24	RF	I		EFM signal input.
25	BIAS	I		Constant-current input for Asymmetry circuit.
26	ASYI	I		Comparator voltage input for Asymmetry.
27	ASYO	O	1,0	Full swing output for EFM. (L=Vss, H=V_{DD}).
28	ASYE	I		L: Asymmetry circuit → OFF. H: Asymmetry circuit → ON.
29	NC		—	
30	PSSL	I		Input to shift output mode of audio data. Serial output at L; parallel output at H.
31	WDCK	O	1,0	D/A Interface for 48 bit slot. Word-clock f=2 Fs.
32	LRCK	O	1,0	D/A Interface for 48 bit slot. LR-clock f= Fs.
33	V_{DD}			Power supply (+5V).
34	DA16	O	1,0	At PSSL=1 for DA16 (MSB) output; PSSL=0 for serial data of 48 bit slot. (2s'COMP, MSB first).
35	DA15	O	1,0	At PSSL=1 for DA15 output; PSSL=0 for bit clock of 48 bit slot.
36	DA14	O	1,0	At PSSL=1 for DA14 output; PSSL=0 for serial data of 64 bit slot. (2s'COMP, LSB first).
37	DA13	O	1,0	At PSSL=1 for DA13 output; PSSL=0 for bit clock of 64 bit slot.
38	DA12	O	1,0	At PSSL=1 for DA12 output; PSSL=0 for LR clock of 64 bit slot.
39	DA11	O	1,0	At PSSL=1 for DA11 output; PSSL=0 for GTOP output.
40	DA10	O	1,0	At PSSL=1 for DA10 output; PSSL=0 for XUGF output.
41	DA09	O	1,0	At PSSL=1 for DA09 output; PSSL=0 for XPLCK output.
42	DA08	O	1,0	At PSSL=1 for DA08 output; PSSL=0 for GFS output.
43	DA07	O	1,0	At PSSL=1 for DA07 output; PSSL=0 for RFCK output.
44	DA06	O	1,0	At PSSL=1 for DA06 output; PSSL=0 for C2P0 output.
45	DA05	O	1,0	At PSSL=1 for DA05 output; PSSL=0 for XRAOF output.
46	DA04	O	1,0	At PSSL=1 for DA04 output; PSSL=0 for MNT3 output.
47	DA03	O	1,0	At PSSL=1 for DA03 output; PSSL=0 for MNT2 output.
48	DA02	O	1,0	At PSSL=1 for DA02 output; PSSL=0 for MNT1 output.
49	DA01	O	1,0	At PSSL=1 for DA01 output; PSSL=0 for MNT0 output.
50	APTR	O	1,0	Control output for aperture compensation. In H for R-ch.
51	APTL	O	1,0	Control output for aperture compensation. In H for L-ch.

Terminal No.	Symbol	I/O		Terminal Function
52	Vss			GND.
53	XTAI	I		X'tal oscillation circuit input. By selecting of mode, f=16.9344MHz or 33.8688MHz.
54	XTAO	O	1,0	X'tal oscillation circuit input. f=16.9344MHz.
55	XTSL	I		Selection input terminal of X'tal. "L" for X'tal 16.9344MHz; "H" for 33.8688MHz.
56	FSTT	O	1,0	2/3 Dividing output of 53 and 54 terminal. No change by variable pitch.
57	C4M	O	1,0	4.2336MHz output. When variable pitched, simultaneously changes.
58	C16M	O	1,0	16.9344MHz output. When variable pitched, simultaneously changes.
59	MD2	I		Digital-out ON/OFF control. ON at H; OFF at L.
60	DOUT	O	1,0	Digital-out output terminal.
61	EMPH	O	1,0	When playback disc emphasized, outputs H; otherwise outputs L.
62	WFCK	O	1,0	WFCK (Write Flame Clock) output.
63	SCOR	O	1,0	Output of subcode sync. S0+S1. H output when either one detected.
64	SBSO	O	1,0	Serial output of Sub P~W.
65	EXCK	I		Clock iutput for SBSO read-out.
66	SQSO	O	1,0	Output for Sub Q 80 bits and PCM peak level 16 bits.
67	SQCK	I		Clock input for SQSO read-out.
68	MUTE	I		Mute at H; remove mute at L.
69	SENS	—	1,Z,0	SENS output. Outputs to CPU.
70	XRST	I		System reset input. Resets at "L".
71	DATA	I		Input of serial data from CPU.
72	XLAT	I		Input for latch from CPU. Latches serial data at release.
73	VDD			Power supply (+5V).
74	CLOK	I		Serial data transfer clock input from CPU.
75	SEIN	I		SENS input from SSP.
76	CNIN	I		Input of tracking pulse.
77	DATO	O	1,0	Serial data output to SSP.
78	XLTO	O	1,0	Serial data latch output to SSP.
79	CLKO	O	1,0	Serial data transfer clock output to SSP.
80	MIRR	I		Mirror signal input. Use for track jump for over 128 tracks, using autosequencer.

CXD2500AQ





CXA1372Q Terminal Function

Terminal No.	Symbol	I/O	Terminal Function
1	Vc	I	Mid-point voltage input terminal.
2	FGD	I	In case of reducing higher range gain of focus servo, connect a capacitor between this terminal and terminal number (3).
3	FS3	I	Shifts higher range gain of focus servo by FS3 ON/OFF.
4	FLB	I	Terminal for external time constant to increase lower range of focus servo.
5	FEO	O	Focus drive output.
6	FE–	I	Reverse input terminal for focus amplifier.
7	SRCH	I	Terminal for external time constant to make focus search waveform.
8	TGU	I	Terminal for external time constant to shift higher range gain of tracking.
9	TG2	I	Terminal for external time constant to shift higher range gain of tracking.
10	AV_{CC}		
11	TAO	O	Tracking drive output.
12	TA–	I	Reverse input terminal for tracking amplifier.
13	SL+	I	Non-reverse input terminal for sled amplifier.
14	SLO	O	Sled drive output.
15	SL–	I	Reverse input terminal for sled amplifier.
16	FSET	I	Terminal to compensate peak in focus/tracking phase.
17	ISET	I	Delivers a current to set the height of focus search, track jump, and sled kick.
18	SSTOP	I	Terminal for limit switch ON/OFF to detect disc innermost circle.
19	AV_{EE}		
20	DIRC	I	Terminal is used at the time of 1 track jump. A 47 kohm pull up resistor is included.
21	LOCK	I	Reckless drive protection circuit of sled; activates at "L". A 47k ohm pull up resistor is included.
22	CLK	I	Serial data transfer clock input from CPU.
23	XLT	I	Latch input from CPU.
24	DATA	I	Serial data input from CPU.
25	XRST	I	Reset input terminal. Resets at "L".
26	C.OUT	O	Terminal to output signal for track number count.
27	SENS	O	Terminal to output FZC, ATSC, TZC, SSTOP by command from CPU.
28	D.GND		
29	MIRR	O	Output terminal for MIRR comparator.
30	DFCT	O	Output terminal for DEFECT comparator.
31	ASY	I	Input terminal for auto-asymmetry control.
32	EFM	O	Output terminal for EFM comparator.
33	FOK	O	Output terminal for focus OK (FOK) comparator.
34	CC1	O	DEFECT bottom hold output terminal.
35	CC2	I	Input terminal to input DEFECT bottom hold output by capacitance combination.
36	DV_{CC}		
37	CB	I	Capacitor connecting terminal for DEFECT bottom hold.
38	CP	I	MIRR hold capacitor connecting terminal. A non-reverse input terminal for MIRR comparator.
39	RFI	I	Input terminal to input RF summing amplifier output by capacitance combination.
40	RFO	O	Output terminal for RF summing amplifier. Check point for eye pattern.
41	DV_{EE}		
42	TZC	I	Tracking zero-cross comparator input terminal.
43	TE	I	Tracking error signal input terminal.
44	TDFCT	I	Capacitor connecting terminal for time constant at the time of defect.
45	ATSC	I	Input terminal of ATSC detecting window comparator.
46	FZC	I	Input terminal of focus zero-cross comparator.
47	FE	I	Focus error signal input terminal.
48	FDFCT	I	Capacitor connecting terminal for time constant at the time of defect.
